**RE: 1st Quarter 2014 Remedial Progress Report
Thriftway Refinery (NMOCD AP-116)
626 County Road 5500, Bloomfield, New Mexico**

Dear Mr. von Gonten and Mr. Hansen:

Animas Environmental Services, LLC (AES) has prepared this 1st Quarter 2014 Remedial Progress Report detailing site activities during the first quarter of 2014 on behalf of Thriftway Company (Thriftway) for the Thriftway Refinery, located at 626 County Road 5500, Bloomfield, San Juan County, New Mexico, in accordance with New Mexico Oil Conservation Division (NMOCD) and New Mexico Environment Department (NMED) Ground Water Quality Bureau (GWQB) regulations.

The 1st Quarter 2014 Remedial Progress Report details groundwater monitoring and gauging activities, multi-phase extraction (MPE) remediation system operations, and phytoremediation activities conducted at the site between January and March 2014. A General Site Plan is included as Figure 1.

1.0 Groundwater Monitoring and Gauging in Monitor Wells

BioTech Remediation (BioTech) conducted groundwater monitoring and gauging of the monitor wells at the site on February 14 and 19, 2014. Based on the most recent sampling plan, monitoring and gauging events are scheduled during the first and third quarters, with groundwater sampling scheduled during the second and fourth quarters. The most recent sampling plan outlined sampling procedures through the end of 2013, and preparation of an updated sampling plan is currently in progress.

1.1 Measurement of Groundwater Elevations

Depth to groundwater in each of the selected wells was measured with an electronic water level indicator, which has an accuracy of 0.01 feet. Depth to groundwater measurements were recorded on Water Sample Collection Forms.

1.2 Measurement of Free Product

Each of the wells previously known to contain light non-aqueous phase liquid (LNAPL, or “free product”) was measured with an electronic interface probe, and the depths to the top of product and the oil/water interface were recorded on a groundwater measurement form. Free product was measured in February 2014 in 18 wells, including TW-7, TW-12, TW-13, TW-14, TW-19 through TW-22, TW-25, TW-26, TW-28, TW-32, TW-33, TW-35, TW-38, TW-40, TW-44, and TW-50.

In monitor wells containing free product, corrected groundwater elevations (H_c) were determined using the following formula:

$$H_c = H_m + (H_o * (\rho_o / \rho_w))$$

where:

H_m is the measured elevation of the hydrocarbon-water interface (ft)

H_o is the thickness of the hydrocarbon layer (ft)

ρ_o is the hydrocarbon density of diesel, assumed to be 0.827 (g/ml) (API, 1986)

ρ_w is the water density, assumed to be 1.0 (g/mL)

2.0 Groundwater Monitoring Results

2.1 Hydraulic Gradient Data

2.1.1 Hydraulic Gradient

Using surveyed top of casing (TOC) elevations and the recorded groundwater depths, AES determined specific groundwater elevations, relative to sea level, for each well measured. Groundwater elevations across the site in February 2014 ranged from 5,424.60 feet above mean sea level (AMSL) in MW-20 to 5,440.53 feet AMSL in TW-19. Groundwater elevations increased across the site by an average of 0.3 feet since the last sampling event in November and December 2013. Groundwater gradient was calculated between TW-1 and TW-42 with a magnitude of 0.006 ft/ft to the northwest for February 2014. The

groundwater flow direction has remained stable, in a northwesterly direction, and is consistent with historical site data.

Table 1 includes depth to groundwater measurements and water table elevations adjusted to mean sea level. Groundwater elevation contours for February 2014 are included on Figure 2.

2.2 Free Product

Free product was measured in 18 monitor wells, and measured LNAPL thicknesses ranged from 0.02 feet in TW-38 to 1.41 feet in TW-20. Overall, free product thicknesses decreased in most of the wells by an average of about 0.3 feet since the November and December 2013 sampling event, with significant decreases noted in TW-13 and TW-29. Note that changes in measured free product thicknesses may be correlated with seasonal groundwater elevation increases across the site. Note that free product was observed for the first time in TW-7 (0.23 feet). Free product thickness contours for February 2014 are presented in Figure 3, and Graph 1 presents free product thicknesses over time in the eastern portion of the product plume (TW-13, TW-14, TW-19, and TW-22, respectively).

3.0 Measurement of Groundwater and Free Product in MPE Wells

BioTech personnel measured depth to groundwater in the MPE wells on February 21, 2014, and free product was noted in 45 MPE wells. Depth to water ranged from 8.78 feet below TOC in MPE-80 to 24.07 feet below TOC in MPE-1. During the February 2014 event, free product thickness ranged from 0.01 feet in MPE-51 up to 0.98 feet in MPE-37. Overall, free product thicknesses in MPE wells generally decreased an average of approximately 0.2 feet from the November and December 2013 sampling event. Note that free product was observed for the first time in MPE-58 (0.02 feet). MPE well data is included in Table 2.

4.0 MPE Remediation System Operations

The MPE remediation system was initially brought online in March 2010 and consists of an RSI internal combustion engine (ICE) unit with two engines (Engine #1 and Engine #2) to extract soil vapors and free product from the MPE extraction wells; however, only Engine #1 was initially utilized. The MPE remediation system (Engine #2) was brought online on May 11, 2012, and was in operation from May through November 2012, when it

was taken off-line for the winter season. During the week of March 6, 2013, Engine #2 was re-installed at the site. A total of approximately 30,054 lbs of petroleum hydrocarbons have been mechanically removed from the site since system startup on March 10, 2010.

4.1 Air Emissions Sampling

The site remained in pulse mode during the first quarter 2014, therefore, no air samples were collected during that reporting period.

5.0 Phytoremediation Project

During March 2014, BioTech personnel and New Mexico State University (NMSU) Farmington Agricultural Science Center personnel prepared the site for additional poplar planting. Site preparation included:

- Submission of a New Mexico One Call request for the upcoming tree boring installation at the site.
- Installation of 100 soil borings.
- At the NMSU nursery, BioTech personnel pruned approximately 100 poplar trees in preparation for the early April 2014 planting.
- An extension of the irrigation system was also laid out and installed.

On April 1, 2014, BioTech and NMSU planted 100 poplar trees at the site. Following tree planting, BioTech turned on the irrigation system, which is operating at an approximate rate of 4 gallons per minute. Photos of the tree planting are included in the Appendix.

6.0 Summary and Conclusions

BioTech Remediation completed groundwater monitoring and gauging at the site in February 2014. Groundwater elevations in February 2014 increased by an average of 0.3 feet since November and December 2013 and are consistent with historical seasonal fluctuations. The groundwater gradient was calculated to be approximately 0.006 ft/ft in a northwest direction across the site, which is also consistent with historical site data.

In February 2014, free product was observed and measured in 18 monitor wells, including TW-7, TW-12, TW-13, TW-14, TW-19 through TW-22, TW-25, TW-26, TW-28, TW-32, TW-

33, TW-35, TW-38, TW-40, TW-44, and TW-50. Measured thicknesses ranged from 0.02 feet (TW-38) to 1.41 feet (TW-20). In February 2014, free product was also observed in 45 MPE remediation wells, with the greatest thickness measured in MPE-37 (0.98 feet). Note that overall, measured free product thicknesses in site monitor wells decreased by an average of about 0.3 feet in most wells and may be correlated with seasonal increases in groundwater elevations across the site. Free product thickness in remediation wells decreased an average of about 0.2 feet.

For MPE operations, Engine #2 was not in operation at the site during the first quarter of 2013 due to winter weather conditions and was re-installed at the site in April 2014. It is estimated that a total of **30,054 lbs** of petroleum hydrocarbons have been mechanically removed from the site since system startup on March 10, 2010.

7.0 Recommendations and Scheduled Site Activities

The following items are scheduled during the 2nd Quarter of 2014:

1. Update the Interim Groundwater Sampling Plan.
2. Complete phytoremediation monitoring activities, which are scheduled for Spring 2014.
3. Conduct routine operations and maintenance on the MPE remediation system.

If you have any questions regarding this report or scheduled site activities, please do not hesitate to contact Deborah Watson or Ross Kennemer at (505) 564-2281.

Sincerely,

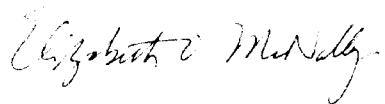

David J. Reese
