RE: Monitoring Well Plugging Report: Groundwater Remediation Program Modifications
Former Dowell Schlumberger Facility, Artesia, New Mexico (GW-114)

Dear Mr. Hansen:

On behalf of Schlumberger Technology Corporation (Schlumberger), CH2M HILL has prepared this monitoring well plugging report summarizing the November 2013 well plugging and abandonment activities conducted under existing Discharge Plan GW-114 at the Former Dowell Schlumberger facility in Artesia, New Mexico. The following sections summarize the well plugging process and results.

Background

On September 16, 2013, Schlumberger submitted a work plan amendment for modifications to the groundwater monitoring program. The proposed modifications included the plugging and abandonment of monitoring wells MW-1, MW-2, MW-3, MW-4, MW-5, MW-13, MW-14, MW-17A, MW-17B, MW-17D, MW-22A, MW-24, and MW-26A (see Figure 1). The work plan amendment is included as Attachment 1. Monitoring well MW-3 had reportedly been damaged during facility reconstruction and subsequently buried beneath gravel and groundwater samples and water level measurements had not been collected at well MW-3 since July 19, 2001. Attempts to locate and properly abandon MW-3 were planned.

On September 18, 2013, the New Mexico Oil Conservation Division (NMOCD) conditionally approved the amendment to the work plan. The NMOCD's conditional approval directed that monitoring well MW-1 should not be abandoned and should remain in the groundwater monitoring program. The NMOCD approval is included as Attachment 2.

Following the NMOCD approval, CH2M HILL contracted with a New Mexico-licensed driller, National Exploration, Wells, and Pumps (NEWP), to perform the well plugging and abandonment. On November 8, 2013, CH2M HILL submitted a well plugging plan of operations to the New Mexico Office of the State Engineer (NMOSE). The well plugging plan had been signed by the New Mexico-licensed driller from NEWP. In accordance with NMOSE regulations, a well plugging plan of operations must be filed with and accepted by the Office of the State Engineer prior to plugging. On November 12, 2013, NMOSE found "the proposed method of operation to be acceptable and in accordance with the Rules and Regulations Governing Well Driller Licensing; Construction, Repair and Plugging of Wells." The well plugging plan of operations and NMOSE approval are included as Attachment 3.

Monitoring Well Plugging and Abandonment

On November 13 and 14, 2013, monitoring wells MW-2, MW-4, MW-5, MW-13, MW-14, MW-17A, MW-17B, MW-17D, MW-22A, MW-24, and MW-26A were plugged and abandoned. The MW-3 area was scanned with ground-penetrating radar in an attempt to locate the reportedly damaged well. No anomalies were detected by the scanning tool, no visual observations of the well were noted, and monitoring well MW-3 was not found. No further efforts to locate MW-3 are proposed. No additional problems or concerns were identified during the well plugging and abandonment activities.

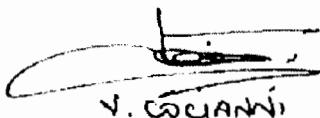

The monitoring wells were abandoned by grouting them closed using a cement-bentonite grout slurry with the grout emplaced in the polyvinyl chloride screen and casing using a tremie pipe. The entire

Mr. Edward Hansen
January 31, 2014
Page 2

surface components (well pad, protective casing, polyvinyl chloride casing) of the wells were removed, and the upper 3 feet of the well was filled with a Portland cement plug. The cement plug was finished flush with the ground surface. The surface completion materials were disposed of in the onsite waste dumpsters.

If you have any questions or comments, please call me at 281-285-4747.

Sincerely,

Virgilio Cocianni
Remediation Manager

RE: Work Plan Amendment
Modifications to the Groundwater Monitoring Program
Former Dowell Schlumberger Facility, Artesia, New Mexico

Dear Mr. Hansen:

Schlumberger Technology Corporation (Schlumberger) has prepared this work plan amendment to perform modifications to the current groundwater monitoring program at the Former Dowell Schlumberger Facility in Artesia, New Mexico. The following sections present background information regarding the existing groundwater monitoring program, proposed modifications to the program, and the schedule for implementing these modifications.

The adjustments are part of the overall evaluation of the site, including an assessment of the efficacy of the current remediation system.

Current Groundwater Monitoring Program

The current groundwater monitoring program includes a network of 35 monitoring wells that are monitored quarterly (Table 1). Depth to water measurements are collected at the 35 wells during each event. Field parameters and groundwater samples are collected from 19 monitoring wells (MW-8, MW-9, MW-11, MW-12, MW-13, MW-15, MW-18, MW-20, MW-21, MW-22, and MW-25 through MW-33) during the first, second, and third quarter monitoring events. During the fourth quarter monitoring event, groundwater samples are collected from the entire 35-well monitoring network. Groundwater samples are analyzed for volatile organic compounds (VOCs) by U.S. Environmental Protection Agency (USEPA) Method 8260.

Modifications to the Groundwater Monitoring Program

Schlumberger has evaluated the current groundwater monitoring program and proposes the following:

- Reduce the sampling frequency for some monitoring from quarterly to annually.
- Reduce the sampling frequency for some monitoring wells from quarterly to semiannually; no wells will be sampled quarterly.
- Remove certain monitoring wells from the groundwater monitoring program entirely.
- Plug and abandoned certain monitoring wells.

The revised monitoring program will continue to provide data across the defined plume area and upgradient, downgradient, and cross-gradient of the plume.

Proposed modifications to the current groundwater monitoring program are described in Table 1 and in the following sections. Table 2 contains the groundwater analytical results for the site monitoring wells from the previous eight groundwater sampling events.

Revisions to Groundwater Monitoring Frequency

Monitoring wells MW-12, MW-17C, MW-18, MW-21, MW-22, MW-25, MW-26, MW-28, MW-29, MW-30, MW-31, and MW-32 are proposed to be sampled semiannually versus quarterly because the rate of change in VOC concentrations at the site is slow, and there are minimal changes in groundwater quality observed between quarterly sampling events. Monitoring well MW-33 will also be sampled semiannually. The well is downgradient of the plume and acts as a sentinel well.

Monitoring wells MW-7, MW-8, MW-11, MW-15, and MW-19 are proposed to be sampled annually versus quarterly. VOC concentrations at these locations were below their applicable New Mexico Water Quality Control Commission (WQCC) standards in each of the monitoring wells for at least the previous eight quarterly sampling events. The wells are not located in VOC source areas, and annual monitoring is expected to be sufficient to confirm that VOC concentrations do not exceed the applicable WQCC standards moving forward.

Depth to water measurements will be collected during the semiannual and annual sampling events from monitoring wells not proposed for abandonment.

Removal of Monitoring Wells from Groundwater Sampling Program

Monitoring wells MW-1, MW-2, MW-4, MW-5, MW-6, MW-9, MW-10, MW-13, MW-14, MW-17A, MW-17B, MW-17D, MW-20, MW-23, MW-24, MW-26A, and MW-27 are proposed to be removed from the groundwater monitoring program for the following reasons:

- Groundwater samples from these wells have not exceeded WQCC standards in the previous eight quarterly sampling events or over a longer period of time. The Second Quarter Monitoring Results—2013 report indicated that MW-6 had been sampled and that trichloroethylene was detected in that monitoring well. However, since that report was prepared, it has been determined that the chain of custody was unclear, and the sample was incorrectly identified by the laboratory. The sample was actually a duplicate of MW-15 collected during the April event. The data have been corrected on Table 2 of this document, and MW-6 has not exceeded WQCC standards in the past eight annual sampling events.
- Monitoring wells are located outside or upgradient of groundwater contamination areas.
- Groundwater elevations at these locations are not required to support hydrogeologic interpretation.
- The wells are not likely to be required for remediation activities.

Monitoring Well Abandonment

Monitoring wells MW-1, MW-2, MW-3, MW-4, MW-5, MW-13, MW-14, MW-17A, MW-17B, MW-17D, MW-22A, MW-24, and MW-26A are proposed to be abandoned for the following reasons:

- Monitoring well MW-3 was reportedly damaged during facility reconstruction and subsequently buried beneath gravel. Groundwater samples and water level measurements

Mr. Edward Hansen
September 16, 2013
Page 3

have not been collected at well MW-3 since July 19, 2001. Therefore, attempts will be made to locate and properly abandon MW-3 by grouting with a cement-bentonite slurry and removal of any remaining surface features.

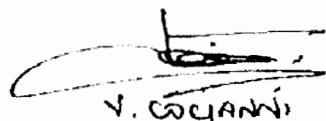

- Monitoring wells MW-22A and MW-26A were installed as temporary 1-inch groundwater monitoring wells for a zero-valent iron (ZVI) treatment pilot project completed in December 2001. Both wells were installed in order to monitor the effects of the ZVI on chlorinated compounds. MW-22A was dropped from the monitoring program with approval from the New Mexico Oil Conservation Division in October 2011, but was never properly abandoned. MW-26A remains in the monitoring program and is sampled annually. Because MW-22A and MW-26A are temporary monitoring points, lack complete construction as permanent monitoring wells, and MW-22A was previously removed from the monitoring program, both have been proposed for abandonment by grouting with a cement-bentonite slurry and removal of any remaining features.
- The remaining monitoring wells have not contained VOC concentrations that exceeded the WQCC standards for at least eight consecutive quarters and, in some cases, as shown on Table 1, for significantly longer than eight quarters. The wells are also not needed to support potential remediation efforts or hydrogeologic interpretation.

Implementation of the Modified Groundwater Monitoring Program

It is proposed that upon receipt of the New Mexico Oil Conservation Division's approval, the groundwater monitoring program revisions discussed in this work plan amendment will be implemented during the fourth quarter 2013 sampling event, currently scheduled for October 2013, and future sampling events.

If you have any questions or comments, please contact me at 281-285-4747 or by e-mail at cocianni-v@slb.com.

Sincerely,

Subject: Discharge Permit (GW-114) Work Plan (GW Monitoring Program) Amendment Approval - Schlumberger Oilfield Services Facility - Artesia

**RE: Work Plan Amendment
for the Schlumberger Oilfield Services'
Schlumberger Oilfield Services Facility - Artesia
507 E. Richey Ave., Artesia, New Mexico
Discharge Permit (GW-114) Work Plan (GW Monitoring Program) Amendment Approval**

Dear Mr. Cocianni:

The Oil Conservation Division (OCD) has received the Work Plan Amendment for the Schlumberger Oilfield Services Facility - Artesia, dated September 17, 2013. The proposed amendment, submitted for the above-referenced site, indicates that the Schlumberger Oilfield Services (Schlumberger) is substantially complying with the requirements of 20.6.2 NMAC [Water Quality Control Commission (WQCC) Regulations]. Therefore, the OCD conditionally approves the amendment to the work plan:

Schlumberger shall continue to monitoring ground water at MW-1 and MW-20 at least annually.

Schlumberger may discontinue monitoring ground water at MW-19.

Schlumberger shall use a cement grout with 1% to 3% bentonite and a 3-foot cap of cement to the surface when plugging the monitoring wells.

Schlumberger shall submit to OCD a plugging report within 180 days.

Please be advised that OCD approval of this amendment does not relieve the owner/operator of responsibility should operations pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the owner/operator of responsibility for compliance with any OCD, federal, state, or local laws and/or regulations.

Thank you for your cooperation in this matter. If you have any questions regarding this matter, please contact at 505-476-3489.

RE: Well Plugging Plan of Operations for unidentified monitoring wells Schlumberger Facility, Artesia, New Mexico

Greetings:

Enclosed is your copy of the Well Plugging Plan of Operations for the above referenced project. The proposed method of operation is found to be acceptable and in accordance with the Rules and Regulations Governing Well Driller Licensing; Construction, Repair and Plugging of Wells 19.27.4 NMAC adopted August 31, 2005 by the State Engineer.

Sincerely,

Catherine (Cath) Goetz
Water Resource Specialist
District II Office of the State Engineer

Enclosure

WELL PLUGGING PLAN OF OPERATIONS

NOTE: A Well Plugging Plan of Operations shall be filed with and accepted by the Office of the State Engineer prior to plugging.

I. FILING FEE: There is no filing fee for this form.

II. GENERAL / WELL OWNERSHIP:

Existing Office of the State Engineer POD Number (Well Number) for well to be plugged: None

Name of well owner: Schlumberger Technology Corporation ATTN: Virgilio Cocianni

Mailing address: 105 Industrial Boulevard

City: Sugar Land State: Texas Zip code: 77478

Phone number: 281-285-4747 E-mail: cocianni-v@slb.com

III. WELL DRILLER INFORMATION:

Well Driller contracted to provide plugging services: National Exploration, Wells, and Pumps

New Mexico Well Driller License No.: WD-1210 Expiration Date: 10-31-15

IV. WELL INFORMATION:

Note: A copy of the existing Well Record for the well to be plugged should be attached to this plan.

r see attached for 12 wells Total P&A - 84

1) GPS Well Location: Latitude: _____ deg, _____ min, _____ sec
Longitude: _____ deg, _____ min, _____ sec, NAD 83

2) Reason(s) for plugging well: Monitoring wells no longer required. Abandonments approved by New Mexico Oil Conservation Division - Environmental Bureau (See attachment containing monitoring well GPS locations)

3) Was well used for any type of monitoring program? YES If yes, please use section VII of this form to detail what hydrogeologic parameters were monitored. If the well was used to monitor contaminated or poor quality water, authorization from the New Mexico Environment Department may be required prior to plugging.

4) Does the well tap brackish, saline, or otherwise poor quality water? NO If yes, provide additional detail, including analytical results and/or laboratory report(s):

5) Static water level: _____ feet below land surface / feet above land surface (circle one)

6) Depth of the well: _____ feet

- 7) Inside diameter of innermost casing: _____ inches.
- 8) Casing material: _____
- 9) The well was constructed with:
_____ an open-hole production interval, state the open interval: _____
_____ a well screen or perforated pipe, state the screened interval(s): _____
- 10) What annular interval surrounding the artesian casing of this well is cement-grouted? _____
- 11) Was the well built with surface casing? _____ If yes, is the annulus surrounding the surface casing grouted or otherwise sealed? _____ If yes, please describe: _____
- 12) Has all pumping equipment and associated piping been removed from the well? _____ If not, describe remaining equipment and intentions to remove prior to plugging in Section VII of this form.

V. DESCRIPTION OF PLANNED WELL PLUGGING:

Note: If this plan proposes to plug an artesian well in a way other than with cement grout, placed bottom to top with a tremie pipe, a detailed diagram of the well showing proposed final plugged configuration shall be attached, as well as any additional technical information, such as geophysical logs, that are necessary to adequately describe the proposal.

- 1) Describe the method by which cement grout shall be placed in the well, or describe requested plugging methodology proposed for the well: Wells shall be abandoned by grouting them closed using a cement-bentonite grout slurry consisting of 95% Portland cement and 5% sodium bentonite. Grout shall be emplaced in the PVC screen and casing using a tremie pipe. The entire surface components (i.e., well pad, protective casing, PVC casing) of the wells shall be removed and the upper three feet of the well shall be filled with a Portland cement plug. The cement plug shall be finished flush with the ground surface.

- 2) Will well head be cut-off below land surface after plugging? YES _____

VI. PLUGGING AND SEALING MATERIALS:

Note: The plugging of a well that taps poor quality water may require the use of a specialty cement or specialty sealant

- 1) For plugging intervals that employ cement grout, complete and attach Table A.
- 2) For plugging intervals that will employ approved non-cement based sealant(s), complete and attach Table B.
- 3) Theoretical volume of grout required to plug the well to land surface: _____
- 4) Type of Cement proposed: Portland cement

- 5) Proposed cement grout mix: _____ gallons of water per 94 pound sack of Portland cement.
- 6) Will the grout be: _____ batch-mixed and delivered to the site
_____ X mixed on site
- 7) Grout additives requested, and percent by dry weight relative to cement: _____

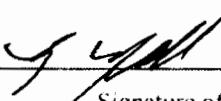

- 8) Additional notes and calculations: _____

VII. ADDITIONAL INFORMATION: List additional information below, or on separate sheet(s):

Attached is a table containing all monitoring well construction information and GPS coordinates.

VIII. SIGNATURE:

I, Bryan Nydaska, say that I have carefully read the foregoing Well Plugging Plan of Operations and any attachments, which are a part hereof; that I am familiar with the rules and regulations of the State Engineer pertaining to the plugging of wells and will comply with them, and that each and all of the statements in the Well Plugging Plan of Operations and attachments are true to the best of my knowledge and belief.

Conditions of Approval for P&A of unpermitted monitoring wells at the former Dowell Schlumberger Facility, Artesia, NM:

- 1) Plugging operations will be conducted in accordance with NMED, NMOCD, or other State or Federal agency having oversight for the above described project.
- 2) The applicant has requested using 3-5% bentonite to the cement grout with 6.8 gals of water per 94 lb sack of Portland Type I/II cement. Attached documentation from NMOCD indicates 1-3%.

The following are acceptable blends of water and bentonite per 94 lb sack of Portland Type I/II cement that may be used at the discretion of the oversight agency:

5.0 to 5.2 gals of water, 0% bentonite, per 94 lb sack of Portland

6.0 gals of water, 2-3% bentonite, per 94 lb sack of Portland

6.5 gals of water, 5% bentonite, per 94 lb sack of Portland.

Bentonite shall be blended with the water prior to addition of cement in the mixing process.

- 3) The above grout blend shall be applied via tremie pipe from the bottom of the well to ground surface per NMAC 19.27.4.

Subject: Discharge Permit (GW-114) Work Plan (GW Monitoring Program) Amendment Approval - Schlumberger Oilfield Services Facility - Artesia

**RE: Work Plan Amendment
for the Schlumberger Oilfield Services'
Schlumberger Oilfield Services Facility - Artesia
507 E. Richey Ave., Artesia, New Mexico
Discharge Permit (GW-114) Work Plan (GW Monitoring Program) Amendment Approval**

Dear Mr. Cocianni:

The Oil Conservation Division (OCD) has received the Work Plan Amendment for the Schlumberger Oilfield Services Facility - Artesia, dated September 17, 2013. The proposed amendment, submitted for the above-referenced site, indicates that the Schlumberger Oilfield Services (Schlumberger) is substantially complying with the requirements of 20.6.2 NMAC [Water Quality Control Commission (WQCC) Regulations]. Therefore, the OCD conditionally approves the amendment to the work plan:

Schlumberger shall continue to monitoring ground water at MW-1 and MW-20 at least annually.

Schlumberger may discontinue monitoring ground water at MW-19.

Schlumberger shall use a cement grout with 1% to 3% bentonite and a 3-foot cap of cement to the surface when plugging the monitoring wells.

Schlumberger shall submit to OCD a plugging report within 180 days.

Please be advised that OCD approval of this amendment does not relieve the owner/operator of responsibility should operations pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the owner/operator of responsibility for compliance with any OCD, federal, state, or local laws and/or regulations.

Thank you for your cooperation in this matter. If you have any questions regarding this matter, please contact at 505-476-3489.

Good morning, Cathy.
You have my approval to plug and abandon the wells indicated in the attachment.
Have a great day. See you in a bit.
Cheers,
Vic.

Subject: FW: Artesia Well Abandonment - need owner approval

Good morning Vic,
Please provide an email response to this email confirming your approval to plug the wells that are planned for removal from the groundwater monitoring program at the site in Artesia, New Mexico.

Thanks,
Cathy

Subject: Artesia Well Abandonment - need owner approval

Hello Cathy:
We are mobilizing to Artesia next week to perform soil borings, soil sampling, and monitoring well abandonment per New Mexico Oil Conservation Division approved work plan amendments. We have been supporting the drilling subcontractor as they complete the well abandonment paperwork for the NM Office of the State Engineer, who regulates well installation and closure. None of the wells at Artesia were required to be permitted when they were installed, however, the driller is required to provide a well plugging plan for review and approval by the OSE prior to performing the abandonments. The drilling subcontractor is required under his drilling license to ensure that the process is followed and that the wells are properly abandoned.

The OSE indicated that written approval from the owner of the wells is required prior to them reviewing and approving the well plugging plan. Therefore, we need Vic to review the attached document and kindly provide his written approval for the abandonment process to proceed. We will then submit the final package to the OSE for review and approval.

Thank you and please let me know if you have any questions regarding the process.

Jeff
