Re: 2011 Annual Groundwater Monitoring Report
Targa Midstream Services LLC
Monument Gas Plant
Lea County, New Mexico

Dear Mr. Von Gonten:

The enclosed report is submitted to the New Mexico Oil Conservation Division on behalf of Targa Midstream Services LLC (Targa) to present the results of groundwater monitoring performed at the Monument Gas Plant for the 2011 calendar year.

If you have any questions or concerns, please contact Mark Larson or myself at 432.687.0901.

Sincerely,

LARSON & ASSOCIATES, INC.

1.0 EXECUTIVE SUMMARY

This report presents the 2011 groundwater monitoring results for the Targa Midstream Services LLC (Targa) Monument Gas Plant (Facility) located approximately 2.6 miles southwest of Monument, New Mexico. The Facility is located in Unit N (SE/4, SW/4), Section 36, Township 19 South, Range 36 East, Lea County, New Mexico. The approximate geodetic position is north 32° 36' 37.79" and west 103° 18' 37.98".

The following activities occurred during 2011:

- First Quarter Gauging Event – March 3, 2011
- Second Quarter Gauging/First Semi-Annual Groundwater Sampling Event – June 7 - 8, 2011
- Third Quarter Gauging Event – September 27, 2011
- Fourth Quarter Gauging/Second Semi-Annual Groundwater Sampling Event – November 15 - 16, 2011

The following observations are documented in this report:

- Groundwater flow remains bifurcating to the south and southeast at a variable gradients north to south
- Monitoring well WP-02 remained dry, as it has since September 20, 2007
- Hydrocarbon product (LNAPL) was present in wells WP-1 (June 2011), WP-14 (November 2011), WP-15 (June, September and November 2011)
- Benzene exceeds the New Mexico Water Quality Control Commission (WQCC) standard
- Barium is the only metal consistently found in samples above the WQCC standard and appears to be a disassociation byproduct that is naturally occurring within the soil
- The dissolved phase hydrocarbon plume has been delineated
- Chloride and TDS are highest in the background (up gradient) well WP-19 due to the use of unlined ponds at a former hydrochloric acid plant located northwest of the Facility

Targa is seeking approval to plug wells WP-21 and WP-22. Targa also requests approval for annual (one yearly) monitoring for BTEX, general water chemistry, and gauging for hydrocarbon product. To contribute to the effectiveness of the Benzene remediation, Targa is seeking to install an air sparging system which should improve the efficiency of the remediation. Documentation will be kept at the Facility and available to the OCD for inspection. Targa will notify the OCD at least 48 hours prior to the annual monitoring events, and as soon as possible upon any significant change in analyte concentrations.

2.0 INTRODUCTION

This report presents the results of groundwater monitoring at the Monument Gas Plant (Facility) owned by Versado Gas Processors, L.P. and operated by Targa Midstream Services LLC (Targa). The Facility is located in Unit N (SE/4, SW/4), Section 36, Township 19 South, Range 36 East in Lea County, New Mexico. The geodetic position is north 32° 36' 37.79" and west 103° 18' 37.98". Figure 1 presents a location and topographic map. Figure 2 presents an aerial photograph. Figure 3 presents a Site drawing.

September 4, 2012

2.1 Chronology

The following events have been documented in connection with the Monument Gas Plant (GW-025):

c. 1935	The Monument Gas Plant is constructed by Natural Gasoline Corporation, a subsidiary of Warren Petroleum.
January 26, 1936	Monument Gas Plant started up for Amerada Petroleum Corporation, later sold back to Warren Petroleum.
1946	El Paso Corporation constructs compressor station southeast of Gas Plant.
April 1962	Climax Chemical Company (Climax) begins operations north-northwest of the Gas Plant. Climax produces hydrochloric acid (HCl), sulfuric acid, and sodium sulfate. Location of Climax Plant chosen for nearby salt deposits. HCl stored in unlined surface impoundments. UST onsite, but closed prior to registration requirements.
c. 1976 - 1977	Monument Gas plant upgraded to Cryo, Amine system, and SRU.
Prior to 1982	Climax plugs and abandons brine wells where previously fresh water was pumped down to evaporites between 2,420 and 2,616 feet bgs to dissolve and return to the surface (Preliminary Review Report, Climax Chemical, 1987).
1982	Justification for No Discharge Plan And Alternative Application for Discharge Plan submitted to State of New Mexico by Climax.
Prior to 1983	A produced condensate release occurs at the Monument Gas Plant (no date, volume or location in records).
June 15, 1987	Preliminary Review Report, Climax Chemical Company issued for RCRA Facility Assessment. EPA analyses from discharge pipe to HCl surface impoundment indicate 15,500 – 17,300 ppm chloride, and 15,100 – 19,000 ppm sulfate at a pH 3.3.
Prior to 1989	Hydrocarbons found in Climax wells (1-2 miles south of facility).
March 29, 1989	OCD representatives Mr. David Boyer and Mr. Roger Anderson inspect Monument Gas Plant's new brine pond liner. "While inspecting the brine pond they noticed the Climax Chemical plant discharging salt water into an open area. Some of this water had broken through a dam (Warren) had built along our property fence and was leaking onto (Warren) property... In addition they asked about the oil processing company located to the south of our plant saying they did not have any record of them." (March 30, 1989 Warren Memorandum)
March 30, 1989	Condensate recovery commences at Monument Gas Plant in monitor wells WP-01, WP-02, WP-03 and Climax 5-9.
August 4, 1989	Warren Petroleum submits to OCD map of monitor wells and pumping records – to date 5.8 gallons condensate recovered at an average of 300 – 500 milliliters every 4 – 6 days.
October 6, 1989	Warren Petroleum submits to OCD map of monitor wells and pumping records – to date 2,054.3 gallons condensate recovered.
December 18, 1989	Warren Petroleum submits to OCD map of monitor wells and pumping records – to date 8,643.5 gallons condensate recovered at an average of 110 gallons per day.
August 6, 1990	Warren Petroleum submits to OCD map of monitor wells and pumping records – to date 18,088.5 gallons condensate recovered at an average of 42 gallons per day.
August 16, 1991	State of New Mexico Hazardous and Radioactive Materials Bureau (HRMB) sent letter to Mr. Jimmy T. Cooper, landowner, notifying him of Climax's request for

2011 Annual Groundwater Monitoring Report
Targa Midstream Services LLC
Monument Gas Plant
Lea County, New Mexico

September 4, 2012

	Alternative Concentration Limits (ACL). Justifications include, "Immediately adjacent to and downgradient of Climax Chemical is the Warren Petroleum Company (Chevron) refinery. The upper-most aquifer beneath the refinery has been significantly impacted by hydrocarbon contamination. Due to past oil-field brine contamination of this same aquifer the Oil Conservation Division (OCD) of New Mexico Energy Minerals and Natural Resources Department is only requiring the refinery to recover hydrocarbon product floating on top of the groundwater within the aquifer."
October 2, 1991	Warren Petroleum submits to OCD map of monitor wells and pumping records – to date 26,348.5 gallons condensate recovered at an average of 20 gallons per day.
October 30, 1991	PIANO analysis conducted by Southern Petroleum Laboratories, Inc. (SPL) on samples from Waste Oil, Condensate, and groundwater wells. Groundwater sample has a Pristine (first peak after C17) to Phytane (first peak after C18) ratio of 1.492; Waste Oil has 1.071; Condensate has neither Pristane nor Phytane.
March 11, 1992	Climax files bankruptcy. Disposal Well DP-298 permit modified to accept HCl injected into a San Andres limestone for neutralization. Also evaluated as a Salt Water Disposal well. (Currently in operation 4/2009)
July 6, 1994	OCD requests Warren Petroleum to submit a workplan to complete the definition of the extent of groundwater contamination.
October 31, 1994	Warren Petroleum submits workplan to OCD to include the installation of soil borings and monitor wells.
February 22 – 24, 1995	Four soil borings (SB-3 to SB-7) and seven monitor wells (WP-04 to WP-10) installed.
March 28, 1995	HRMB notification letter to Warren Petroleum of "...at least 2 feet of oil product floating on top of the groundwater..." in well #12-9. (This well is upgradient from the Monument Plant). Letter further requests Warren to determine if a pipeline from the Monument Greyburg-San Andres Field had a leak prior to 1991.
April 21, 1995	Geraghty & Miller submits Liquid Hydrocarbon Assessment for Warren Petroleum review. Major report findings are: impacted shallow groundwater is not a viable water resource; groundwater quality upgradient and around the plant is not suitable for drinking water, livestock or irrigation use; the horizontal and vertical extent of the impacted area is defined; and the sources of contamination are not limited to the Gas Plant, but also include upgradient sources.
May 2, 1995	Warren Petroleum submits Liquid Hydrocarbon Assessment to OCD.
June 20, 1995	OCD requests: additional groundwater delineation; installing and operating a product recovery system in WP-2, WP-3, and WP-10; and quarterly monitoring.
August 31, 1995	Warren Petroleum submits response to OCD proposing: a monitor well adjacent to the Climax well; an additional monitor well east of WP-10; and additional wells to the east of WP-10 as needed.
September 26, 1995	OCD approves August 31st workplan.
Prior to October 31, 1995	WP-08 and WP-09 converted to cathodic protection wells.
November 8 – 9, 1995	Geraghty & Miller install WP-11 through WP-15 (data reported in February 29, 1996 report).
June 14, 1996	Warren Petroleum submits to the OCD groundwater elevation and product

2011 Annual Groundwater Monitoring Report
Targa Midstream Services LLC
Monument Gas Plant
Lea County, New Mexico

September 4, 2012

	thickness maps for July – December 1995, and request change from semi-annual to annual reporting.
August 9, 1996	OCD grants request to change to annual reporting.
February 14, 1997	Geraghty & Miller submits Annual Summary Report for 1996 Groundwater Monitoring Activities for OCD review. Groundwater is reportedly bifurcating towards the southeast and the south, with a static head drop of approximately 0.5 feet across the site. Hydrocarbon recovery system expansion to include WP-11 and WP-13 recommended.
March 25, 1997	OCD responds to February 14th report and approves recommendations.
April 1997	Hydrocarbon recovery operations ceased due to low water table conditions and pump limitations.
March 10, 1998	ARCADIS Geraghty & Miller submits Annual Summary Report for 1997 Groundwater Monitoring Activities for OCD review. Groundwater is reportedly bifurcating towards the southeast and the south. Decreased monitoring frequency requested.
June 22, 1998	OCD approves changing monitoring frequency from quarterly to semiannually.
February 17, 2000	ARCADIS Geraghty & Miller submits Annual Report for 1999 Groundwater Monitoring Activities for OCD review. Groundwater is reportedly bifurcating towards the southeast and the south.
April 20, 2001	ARCADIS Geraghty & Miller submits Annual Report for 2000 Groundwater Monitoring Activities for OCD review.
July 25, 2001	LAI on behalf of Dynegy submits Groundwater Discharge Plan GW-025 to OCD.
January 9, 2002	ARCADIS Geraghty & Miller submits Annual Report for 2001 Groundwater Monitoring Activities for OCD review. Groundwater is reportedly bifurcating towards the southeast and the east.
January 17, 2002	OCD approves the Groundwater Discharge Plan with conditions.
February 11, 2003	LAI submits Subsurface Investigation Report to OCD.
March 6, 2003	OCD acknowledges receipt of the Subsurface Investigation Report and requests additional monitor wells to the east, south and west of the plant.
March 18, 2003	LAI submits to the OCD on behalf of Dynegy, 2002 Annual Groundwater Monitoring Report.
April 24, 2003	OCD requests a workplan for “additional downgradient and lateral controls on the extent of hydrocarbon contamination of groundwater.”
June 27, 2003	Workplan submitted to OCD for groundwater investigations at the Monument Gas Plant plume.
September 10, 2003	OCD approves Monument Gas Plant groundwater investigation.
October 7, 2003	LAI submits to Dynegy a summary of gas chromatography fingerprint analyses for PSH from WP-04, WP-06, and WP-15 (6/10/2003 data); a summary of PSH thicknesses for WP-04 and WP-15 during 2002-2003; groundwater analyses summary; maps of PSH thickness; and bar graphs of hydrocarbon thickness measurements.
November 14, 2003	Dynegy submits to the OCD Workplan for Monitoring Well Installation at Monument Gas Plant.
January 4, 2004	LAI submits to the OCD the results of North (#2) Brine Pond subsurface closure investigation. Three hand auger borings to 7 feet bgs and three soil borings to 30 feet bgs installed.
March 18, 2004	LAI submits 2003 Annual Groundwater Monitoring Report for OCD review.

September 4, 2012

May 15, 2005	LAI submits 2004 Annual Groundwater Monitoring Report for OCD review.
May 18, 2005	Email from OCD requesting additional monitor wells downgradient of WP-04, and WP-12 & WP-14.
August 4, 2005	LAI installs WP-16, WP-17, and WP-18 in the downgradient direction. WP-17 and WP-18 exceed WQCC values for benzene.
November 1, 2005	LAI submits Free Product Investigation Report to OCD documenting the installation of WP-04R, WP-16, WP-17, and WP-18.
February 25, 2006	LAI submits 2005 Annual Groundwater Monitoring Report for OCD review. Continued quarterly groundwater monitoring recommended.
March 3, 2006	LAI submits to the OCD the Brine Pond #1 closure plan.
July 17, 2007	LAI submits 2006 Annual Report, Monument Plant Ground Water Monitoring for OCD review.
September 29, 2008	LAI submits 2007 Groundwater Monitoring Report for OCD review.
September 30, 2008	LAI installs five soil borings in the (#1) South Brine Pond as part of closure investigation.
October 21, 2008	OCD approves closure plan for (#2) North Brine Pond.
December 29, 2008	LAI installs monitor wells WP-19 and WP-20 upgradient and downgradient of the (#2) North Brine Pond, respectively, and adjacent to – and downgradient of – the Climax facility. Chloride in groundwater is 17,700 mg/l and 7,780 mg/l, respectively.
May 26 – 27, 2009	WP-21, WP-22, and WP-23 installed and achieves lateral and downgradient hydrocarbon plume delineation.
July 16, 2009	North (#2) Brine Pond Closure Report submitted to OCD.
July 17, 2009	South (#1) Brine Pond Investigation Report submitted to OCD.

22 Topography

The surface elevation is approximately 3,575 feet above mean sea level as shown on the Monument South, New Mexico (1985) USGS 7.5-Minute Quadrangle Map. The topographic region is the relatively flat *Laguna Valley* section of the *Querecho Plains*. The topography slopes gently to the southeast. A current topographic map is included as Figure 1.

23 Geology

The *Geologic Map of New Mexico* (2003) indicates the surface geology is comprised of Holocene to mid-Pleistocene age piedmont alluvial deposits. The description indicates this material includes deposits of higher gradient tributaries bordering major stream valleys, alluvial veneers of the piedmont slope, and alluvial fans. Locally, it may include the uppermost Pliocene deposits.

Subsurface conditions at the Site primarily consist of Ogallala Formation unconformably overlying Chinle redbeds. Following deposition of the Ogallala, a prolonged period of erosion reworked the fringe areas of the Ogallala creating the Mescalero Ridge, north of the Facility. The reworked Ogallala deposits form the bulk of the alluvial material that has accumulated in the Laguna Valley (Nicholson and Clebsch, 1961). The site is located on the edge of the Laguna Valley where a relatively thin sequence of alluvial material is present at the surface.

September 4, 2012

Monitor well boring logs indicate a general lithology of a two- to 12-foot thick layer of unconsolidated sand over an 18- to 35-foot thickness of carbonate-indurated sand (caliche). Beneath the caliche layer is a clayey sand or red-bed clay. The geology encountered in the monitor wells is interpreted from the top-down to be a thin sequence of Holocene to Pleistocene aged eolian and alluvial sands deposited unconformably on a sequence of Miocene-Pliocene age Ogallala Formation alluvial sands. Much of the remaining Ogallala sequence is now calcified. This caliche layer most likely represents an *in situ* carbonate inter-granular deposition at the funicular vadose zone from continued deflation of the groundwater surface as erosion deepened the ancestral stream channels, and/or deposition in the pendular vadose zone by the down-driving of carbonates by precipitation, leaving a residual during dry period evaporation.

Groundwater occurs only in the bottom portion of the Ogallala in the vicinity of the Facility. The Ogallala Formation is also unconformably deposited on Triassic-aged Chinle redbeds. To collect adequate groundwater in monitor wells to determine static potentiometric surface elevation, most of the wells are completed with a sump extending into the Chinle Formation.

24 Surface Water Occurrence

There are no streams, springs, or ponds on or within two miles of the Facility. The nearest surface water is the ephemeral "South" Monument Draw south of the Facility, Monument Springs north of the Facility, and the ephemeral "North" Monument Draw east of the Facility.

The nearest spring, Monument Springs, is located about two miles north of the Facility in Section 26, Township 19 South, Range 36 East, where groundwater in the Ogallala deposits discharge at the contact with the underlying and impermeable Chinle redbeds.

25 Groundwater Occurrence

Regional direction for groundwater flow is towards the south and southeast, with variations occurring near pumping stresses and subsurface features. No water wells were identified on the Office of the New Mexico State Engineer database for Section 36, Township 19 South, Range 36 East.

An early investigation by Nicholson and Clebsch (1961) produced a groundwater map that indicates a ridge in the "redbeds" that bisects the Site from the north to south and splits groundwater into two lobes – a west lobe moving to the south, as well as an east lobe moving to the southeast. This ridge was also described as a "nose" by Geohydrology Associates, Inc., in the circa 1982 report prepared for the Climax Chemical plant (*"Justification for No Discharge Plan and Alternative Application for Discharge Plan, page 15"*). The early investigations also mention widespread historic chloride contamination in groundwater prior to 1955, and the occurrence of "oil stain on water" or "strong odor" reported in four diverse locations in 1961 and 1981.

Light non-aqueous phase liquid (LNAPL) and depth to groundwater were measured in twenty monitoring wells on March 3, June 7, September 27 and November 15, 2011. The measurements were collected at the top of the PVC well casing with an electronic oil and water interface probe that was decontaminated between wells with a solution of Alconox® detergent and water and rinsed with commercially available distilled water. LNAPL was observed in three wells (WP-1, WP-14, and WP-15) from 0.01 to 0.1 feet thick. The LNAPL appears to be consistent with natural gas condensate.

September 4, 2012

The depth to groundwater increased between about 0.02 (WP-6) and 2.54 (WP-14) feet between March and November 2011, indicating falling groundwater conditions that may be attributed to seasonal fluctuation from lack of recharge. Table 1 presents a summary of the LNAPL and depth to groundwater measurements. Depth to groundwater measurements from March 3 and November 15, 2011, were used to prepare groundwater potentiometric maps presented in Figure 4a and 4b, respectively.

On June 7, 2011, depth to groundwater varied between about 26.67 (WP-10) and 37.92 (WP-17) feet below top of casing (TOC). The groundwater elevation ranged from approximately 3558.71 feet above mean seal level (MSL) at WP-19 (up gradient) to 3535.65 feet above MSL at WP-23 (down gradient). This map also shows the west lobe with groundwater moving to the south and east lobe with groundwater moving to the southeast.

On November 15, 2011, depth to groundwater varied between about 27.25 (WP-10) and 39.30 (WP-14) feet below TOC. The groundwater elevation ranged from approximately 3558.26 feet above MSL at WP-19 (up gradient) to 3535.01 feet above MSL at WP-23 (down gradient). This map shows the west lobe with groundwater moving to the south and east lobe with groundwater moving to the southeast.

3.0 GROUNDWATER SAMPLES AND LABORATORY ANALYSIS

Groundwater samples were collected from the monitoring wells during two semi-annual events on June 7 and 8, 2011 and November 15 and 16, 2011. Samples were not collected from WP-14 and WP-15 due to the presence of LNAPL. WP-4 and WP-17 had insufficient volume for sampling on November 15 and 16, 2011. The groundwater samples were collected after removing approximately three well volumes of groundwater or purging dry with dedicated disposable polyethylene bailers or pumping with an electric submersible pump and dedicated disposable tubing. The samples were carefully transferred to laboratory containers that were labeled, sealed with custody labels, packed in an ice filled chest and delivered under chain of custody control to DHL Analytical, Inc. (DHL) or Xenco Laboratories, both National Environmental Laboratory Accreditation Program (NELAP) accredited laboratories located in Round Rock, Texas. All metals samples were laboratory-filtered to exclude particles larger than 0.45μ and acidified with nitric acid within 24-hours of collection. DHL analyzed the samples for benzene, toluene, ethylbenzene, xylene (BTEX) by method SW-8021B, filtered metals (arsenic, barium, cadmium, chromium, lead, mercury, selenium, silver) by methods SW-6020 and 7470A, anions, alkalinity and total dissolved solids (TDS) by methods E-300, M2320B and M2540, respectively. A duplicate sample was collected from WP-22 on June 8, 2011 and WP-7 on November 16, 2011 as a blind sample that the laboratory analyzed for quality assurance and quality control (QA/QC). Water was contained in a portable tank and discharged to the facility's process water system for disposal in a permitted Class II injection well. The laboratory analytical reports are presented on a CD ROM in Appendix A.

3.1 BTEX Analysis

Benzene concentrations observed during the life of this investigation indicate no clear increasing or decreasing trends. Upward movement of groundwater in the capillary fringe may account for increases in benzene concentrations reported during the November 2011 sample event. All benzene values represent dissolved-phase concentrations that are well below the benzene solubility limit of 1,770 milligrams per liter (mg/L). Toluene, ethylbenzene and xylenes were below the New Mexico Water Quality Control Commission (WQCC) human health standards of 0.75 mg/L (toluene and ethylbenzene) and 0.62 mg/L (xylenes). WP-4 and WP-17 had insufficient fluid for testing on November 16, 2011. Table 2 presents a summary of the BTEX analysis.

June 2011 Benzene Results

September 4, 2012

The following samples from the east lobe exhibited benzene concentrations above the WQCC human health standard of 0.01 mg/L:

- WP-10 (4.18 mg/L)
- WP-11 (4.47 mg/L)
- WP-12 (1.76 mg/L)
- WP-13 (0.0776 mg/L)
- WP-14 (0.1490 mg/L)
- WP-15 (1.10 mg/L)
- WP-17 (1.84 mg/L)
- WP-18 (0.112 mg/L)

The following samples from the west lobe exhibited benzene concentrations above the WQCC human health standard of 0.01 mg/L:

- WP-01 (0.0513 mg/L)
- WP-04 (0.104 mg/L)
- WP-05 (0.8320 mg/L)

A comparison of the primary (WP-22, <0.001 mg/L) and duplicate (<0.001 mg/L) samples indicate no deviation. Case Narrative provided by Xenco Laboratories indicates QC parameters were not achieved due to Matrix interference and confirmed by re-analysis. Figure 4a presents a concentration map of dissolved benzene concentrations reported in groundwater samples from the June 2011 sampling event.

November 2011 Benzene Results

The following samples from the east lobe exhibited benzene concentrations above the WQCC human health standard of 0.01 mg/L:

- WP-10 (4.17 mg/L)
- WP-11 (5.20 mg/L)
- WP-12 (1.94 mg/L)
- WP-18 (0.235 mg/L)

The following samples from the west lobe exhibited benzene concentrations above the WQCC human health standard of 0.01 mg/L:

- WP-05 (0.6980 mg/L)

A comparison of the primary (WP-7, <0.0008 mg/l) and duplicate (<0.0008 mg/L) samples indicates no deviation. No data quality exceptions were noted in the DHL case narratives. LNAPL was observed in wells WP-14 and WP-15 therefore, no samples were collected during this event. Figure 4b presents a concentration map of dissolved benzene concentrations reported in groundwater samples from the November 2011 sampling event. Benzene was below the WQCC human health standard in down gradient well WP-23 (0.0013 mg/L) confirming delineation of the plume.

3.2 Dissolved Metals Analysis

Only barium was observed in select wells at concentrations above the WQCC human health standard of 1.0 mg/L during the June 2011 and November 2011 sampling events. Other metals including chromium,

September 4, 2012

lead and selenium have been observed sporadically above the WQCC human health standards. Arsenic, cadmium, mercury and silver have not been observed at concentrations exceeding the associated WQCC human health standards during any monitoring event. Table 3 presents a cumulative summary of the dissolved metals analyses.

Barium concentrations observed over the life of this investigation indicate there no clear increasing or decreasing trends. The spatial distribution of barium above the WQCC human health standard of 1.0 mg/L is primarily east and southeast of the facility. The historically highest concentrations (69.2 to 82.9 mg/L) have been observed in WP-17, which is located offsite and southeast of the facility. WP-04 and WP-17 had insufficient fluid for testing on November 16, 2012.

June 2011 Barium Results

The following samples from the east lobe exhibited barium concentrations above the WQCC human health standard of 1.0 mg/L:

- WP-10 (1.85 mg/L)
- WP-11 (2.15 mg/L)
- WP-12 (1.01 mg/L)

The following samples from the west lobe exhibited barium concentrations above the WQCC human health standard of 1.0 mg/L:

- WP-01 (2.81 mg/L)
- WP-4 (4.05 mg/L)

A comparison of the primary (WP-22, 0.0830 mg/L) and duplicate (0.0801 mg/L) samples indicate a 3.55% sample variance, which is within data acceptance criteria. Case Narrative indicates that Xenco Laboratories did not achieve all QC parameters but control samples were within laboratory control limits.

November 2011 Barium Results

The following samples from the east lobe exhibited barium concentrations above the WQCC human health standard of 1.0 mg/L:

- WP-10 (2.30 mg/L)
- WP-11 (2.40 mg/L)
- WP-18 (2.37 mg/L)

The following samples from the west lobe exhibited barium concentrations above the WQCC human health standard of 1.0 mg/L:

- WP-01 (1.34 mg/L)

A comparison of the primary (WP-7, 0.028 mg/L) and duplicate (0.030 mg/L) samples indicate a 6.90% sample variance, which is within data acceptance criteria. Case Narrative indicates that DHL did not achieve all QC parameters but control samples were within laboratory control limits. LNAPL was observed in wells WP-14 and WP-15 therefore, no samples were collected during this event.

September 4, 2012

3.3 General Chemistry Analysis

Chloride, sulfate and TDS were above the WQCC domestic water quality standards of 250 mg/L, 600 mg/L and/or 1,000 mg/L, respectively, in all sampled monitor wells except WP-01. Chlorides, sulfate, and TDS concentrations over time have very similar trends and appear linear with neither increasing nor decreasing trends exhibited. A widespread chloride and TDS plume originates from the Climax Chemical plant located northwest (up gradient) of the facility and the highest chloride and TDS concentrations occur in well WP-7 located near the central-west (up gradient) corner of the facility and down gradient of the Climax facility. WP-04 and WP-17 had insufficient fluid for testing on November 16, 2011. Table 4 presents a summary of the general chemistry analytical results.

June 2011 Results

Chlorides – The following samples from the east lobe exhibited chloride concentrations above the WQCC domestic water quality standard of 250 mg/L:

- WP-10 (449 mg/L)
- WP-11 (401 mg/L)
- WP-12 (657 mg/L)
- WP-14 (4,310 mg/L)
- WP-15 (764 mg/L)
- WP-16 (513 mg/L)
- WP-17 (5,630 mg/L)
- WP-18 (5,320 mg/L)
- WP-21 (3,060 mg/L)
- WP-22 (1,570 mg/L)
- WP-23 (7,260 mg/L)

Laboratory results from the west lobe reported chloride concentrations in excess of the 250 mg/L in the following samples:

- WP-05 (1,400 mg/L)
- WP-06 (672 mg/L)
- WP-07 (11,600 mg/L)
- WP-19 (22,300 mg/L)
- WP-20 (9,210 mg/L)

Sulfate – Laboratory results from the east lobe reported sulfate above the WQCC domestic water quality standard of 600 mg/L in the following samples:

- WP-14 (1,390 mg/L)
- WP-18 (635 mg/L)
- WP-21 (1,120 mg/L)
- WP-22 (715 mg/L)
- WP-23 (1,690 mg/L)

Laboratory results from the west lobe reported sulfate above the WQCC domestic water quality standard of 600 mg/L in the following samples:

- WP-06 (1,710 mg/L)
- WP-07 (4,800 mg/L)
- WP-19 (4,300 mg/L)

September 4, 2012

- WP-20 (3,760 mg/L)

TDS – Analytical data from the east lobe exhibited TDS concentrations in excess of the WQCC domestic water quality standard of 1,000 mg/L in the following samples:

- WP-10 (1,930 mg/L)
- WP-11 (1,840 mg/L)
- WP-12 (2,620 mg/L)
- WP-13 (1,400 mg/L)
- WP-14 (8,370 mg/L)
- WP-15 (2,310 mg/L)
- WP-16 (1,720 mg/L)
- WP-17 (8,120 mg/L)
- WP-18 (10,800 mg/L)
- WP-21 (7,110 mg/L)
- WP-22 (3,780 mg/L)
- WP-23 (12,500 mg/L)

Analytical data from the west lobe exhibited TDS concentrations in excess of the WQCC domestic water quality standard of 1,000 mg/L in the following samples:

- WP-04 (1,070 mg/L)
- WP-04R (1,120 mg/L)
- WP-05 (3,030 mg/L)
- WP-06 (3,430 mg/L)
- WP-07 (22,200 mg/L)
- WP-19 (38,300 mg/L)
- WP-20 (18,000 mg/L)

Case Narrative indicates that Xenco Laboratories did not achieve all QC parameters but control samples were within laboratory control limits. Figure 5a and Figure 6a present concentration maps of observed chloride and TDS concentrations in groundwater samples for the June 2011 sampling event, respectively.

November 2011 Results

Chlorides – The following samples from the east lobe exhibited chloride concentrations above the WQCC domestic water quality standard of 250 mg/L:

- WP-10 (512 mg/L)
- WP-11 (469 mg/L)
- WP-12 (671 mg/L)
- WP-16 (410 mg/L)
- WP-18 (3,770 mg/L)
- WP-21 (3,500 mg/L)
- WP-22 (1,850 mg/L)
- WP-23 (7,080 mg/L)

Laboratory results from the west lobe reported chloride concentrations in excess of the 250 mg/L in the following samples:

- WP-05 (1,360 mg/L)

September 4, 2012

- WP-06 (829 mg/L)
- WP-07 (14,400 mg/L)
- WP-19 (12,000 mg/L)
- WP-20 (9,950 mg/L)

Sulfates – The following samples from the east lobe exhibited sulfate concentrations above the WQCC domestic water quality standard of 600 mg/L:

- WP-21 (1,150 mg/L)
- WP-22 (699 mg/L)
- WP-23 (1,180 mg/L)

The following samples from the west lobe exhibited sulfate concentrations above the WQCC domestic water quality standard of 600 mg/L:

- WP-06 (1,270 mg/L)
- WP-07 (4,900 mg/L)
- WP-19 (6,080 mg/L)
- WP-20 (4,830 mg/L)

TDS – Analytical data from the east lobe exhibited TDS concentrations in excess of the WQCC domestic water quality standard of 1,000 mg/L in the following samples:

- WP-10 (2,260 mg/L)
- WP-11 (2,120 mg/L)
- WP-12 (2,880 mg/L)
- WP-13 (1,780 mg/L)
- WP-16 (2,070 mg/L)
- WP-18 (8,780 mg/L)
- WP-21 (7,450 mg/L)
- WP-22 (4,250 mg/L)
- WP-23 (12,800 mg/L)

Analytical data from the west lobe exhibited TDS concentrations in excess of the WQCC domestic water quality standard of 1,000 mg/L in the following samples:

- WP-04R (1,330 mg/L)
- WP-05 (3,520 mg/L)
- WP-06 (3,760 mg/L)
- WP-07 (29,200 mg/L)
- WP-19 (27,500 mg/L)
- WP-20 (22,800 mg/L)

No data quality exceptions were noted in the DHL case narratives. LNAPL was observed in wells WP-14 and WP-15 therefore, no samples were collected during this event. Figure 5b and 6b present concentration maps of observed chloride and TDS concentration for the November 2011 sampling event, respectively. Chlorides, Sulfates, and TDS were highest in the background (up gradient) well WP-19 due to the use of unlined ponds at a former hydrochloric acid manufacturing plant.

September 4, 2012

4.0 CONCLUSIONS

The following observations are documented in this report:

- Groundwater flow direction remains bifurcating to the south and southeast at variable gradients from North to South
- WP-02 remained dry, as it has since September 20, 2007
- LNAPL consistent with natural gas condensate was detected in WP-01 (June 2011), WP-14 (November 2011), WP-15 (June, September and November 2011)
- No samples were collected from WP-14 and WP-15 (May and November 2011) due to LNAPL in the wells
- Benzene exceeds the WQCC standard in wells WP-4, WP-5, WP-10, WP-11, WP-12, WP-14, WP-15, WP-17, and WP-18
- Benzene was below the WQCC standard in WP-23 confirming plume delineation
- Barium is the only metal compound consistently observed in groundwater above the WQCC standard
- Hydrocarbon plume delineation has been achieved

5.0 Recommendations

No further investigation is needed since the dissolved phase hydrocarbon plume has been delineated. Targa proposes to conduct annual (once yearly) gauging and sampling for general water chemistry and BTEX. Targa proposes to discontinue sampling for dissolved metals since barium is considered a byproduct of the soil. Targa requests approval to plug monitoring wells WP-21 and WP-22. Laboratory analytical results will be maintained at the facility for inspection by the OCD. Product recovery will resume in wells showing recoverable LNAPL. Targa will notify the OCD at least 48 hours prior to the annual monitoring events, and as soon as possible to any significant change in analyte concentrations.

WP-23								

Notes

All values are in feet, unless otherwise noted.

TOC - top of casing

Elevations are referenced to 1984 Geodetic Datum.

LNAPL sheens are presented as 0.00 foot thickness

RE: Monument Gas Plant

Dear Alexis Johnson:

DHL Analytical received 19 sample(s) on 11/17/2011 for the analyses presented in the following report.

There were no problems with the analyses and all data met requirements of NELAC except where noted in the Case Narrative. All non-NELAC methods will be identified accordingly in the case narrative and all estimated uncertainties of test results are within method or EPA specifications.

If you have any questions regarding these tests results, please feel free to call. Thank you for using DHL Analytical.

Sincerely,

A handwritten signature in black ink, appearing to read "John DuPont".

John DuPont
General Manager

This report was performed under the accreditation of the State of Texas Laboratory Certification Number:
T104704211-11-7

Carrier name: LoneStar

Shipping container/cooler in good condition?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	Not Present <input type="checkbox"/>
Custody seals intact on shipping container/cooler?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	Not Present <input type="checkbox"/>
Custody seals intact on sample bottles?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Not Present <input checked="" type="checkbox"/>
Chain of custody present?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Chain of custody signed when relinquished and received?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Chain of custody agrees with sample labels?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Samples in proper container/bottle?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Sample containers intact?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Sufficient sample volume for indicated test?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
All samples received within holding time?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Container/Temp Blank temperature in compliance?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	2.3 °C, 1.5
Water - VOA vials have zero headspace?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	No VOA vials submitted <input type="checkbox"/>
Water - pH acceptable upon receipt?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Not Applicable <input checked="" type="checkbox"/>

CASE NARRATIVE

Sample was analyzed using the methods outlined in the following references:

Method SW6020 - Metals Analysis
Method SW7470A - Mercury Analysis
Method SW8021B - Volatile Organics by GC Analysis
Method E300 - Anions Analysis
Method M2320 B (18th Edition) - Alkalinity Analysis
Method M2540C (18th Edition) - TDS Analysis

LOG IN

DHL samples 1111138-01 through 15 were received and log-in performed on 11/17/11 and samples 1111138-16 through 19 were received and log in performed on 11/18/11. A total of 19 samples were received. The time of collection was Mountain Standard Time. The samples arrived in good condition and were properly packaged.

METALS ANALYSIS

For Metals analysis performed on 11/23/11 and 11/29/11 the matrix spike and matrix spike duplicate recoveries were out of control limits for some analytes. These are flagged accordingly in the QC summary report. The sample selected for the matrix spike and matrix spike duplicate was from this work order. The LCS was within control limits for these analytes. No further corrective actions were taken.

For Metals analysis performed on 11/23/11 and 11/29/11 the RPD for the serial dilution was above control limits for a few analytes. These are flagged accordingly. The PDS was within control limits for these analytes. No further corrective actions were taken.

VOLATILE ORGANICS BY GC ANALYSIS

For Volatile Organics by GC analysis some samples were diluted prior to analysis due to the nature of the samples (concentration of target compounds).

Project Address:

Alexis Johnson:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number 419105. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. Estimation of data uncertainty for this report is found in the quality control section of this report unless otherwise noted. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 419105 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Brent Barron, II

Odessa Laboratory Manager

Recipient of the Prestigious Small Business Administration Award of Excellence in 1994.

Certified and approved by numerous States and Agencies.

Analytical non conformances and comments:

Batch: LBA-859264 Anions by E300
E300MI

*Batch 859264, Chloride, Sulfate recovered above QC limits in the Matrix Spike.
Samples affected are: 419105-005, -004, -003, -007, -002, -001, -006.
The Laboratory Control Sample for Chloride , Sulfate is within laboratory Control Limits*

Batch: LBA-859738 BTEX by EPA 8021B
SW8021BM

*Batch 859738, Benzene recovered above QC limits in the Matrix Spike.
Samples affected are: 419105-005, -008, -002, -006.
The Laboratory Control Sample for Benzene is within laboratory Control Limits*

Batch: LBA-859912 BTEX by EPA 8021B
SW8021BM

*Batch 859912, 4-Bromofluorobenzene recovered below QC limits . Matrix interferences is suspected; data confirmed by re-analysis
Samples affected are: 419105-004.*

Batch: LBA-859989 Dissolved Metals by SW-846 6010C
SW6010C

*Batch 859989, Magnesium recovered below QC limits in the Matrix Spike. Calcium, Potassium, Sodium recovered below QC limits in the Matrix Spike and Matrix Spike Duplicate. Selenium recovered above QC limits in the Matrix Spike Duplicate.
Samples affected are: 419105-005, -004, -003, -002, -001.
The Laboratory Control Sample for Magnesium, Calcium, Sodium, Selenium, Potassium is within laboratory Control Limits*

Flagging Criteria

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the MQL and above the SQL.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.
- JN** A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

Document Title: Sample Receipt Checklist

Document No.: SYS-SRC

Revision/Date: No. 01, 5/27/2010

Effective Date: 6/1/2010 Page 1 of 1

Prelogin / Nonconformance Report - Sample Log-In

Client: Larson & Associates
Date/Time: 6-8-11 8:35
Lab ID #: 419105
Initials: JM

Sample Receipt Checklist

1. Samples on ice?	Blue	Water	No	
2. Shipping container in good condition?	(Yes)	No	None	
3. Custody seals intact on shipping container (cooler) and bottles?	Yes	No	(N/A)	
4. Chain of Custody present?	(Yes)	No		
5. Sample instructions complete on chain of custody?	(Yes)	No		
6. Any missing / extra samples?	Yes	(No)		
7. Chain of custody signed when relinquished / received?	(Yes)	No		
8. Chain of custody agrees with sample label(s)?	(Yes)	No		
9. Container labels legible and intact?	(Yes)	No		
10. Sample matrix / properties agree with chain of custody?	(Yes)	No		
11. Samples in proper container / bottle?	(Yes)	No		
12. Samples properly preserved?	(Yes)	No	N/A	
13. Sample container intact?	(Yes)	No		
14. Sufficient sample amount for indicated test(s)?	(Yes)	No		
15. All samples received within sufficient hold time?	(Yes)	No		
16. Subcontract of sample(s)?	(Yes)	No	N/A	
17. VOC sample have zero head space?	(Yes)	No	N/A	
18. Cooler 1 No. lbs	Cooler 2 No. lbs	Cooler 3 No. lbs	Cooler 4 No. lbs	Cooler 5 No. lbs
4.1				
°C	°C	°C	°C	°C

Nonconformance Documentation

Contact: _____ Contacted by: _____ Date/Time: _____

Regarding: _____

Corrective Action Taken: _____

Check all that apply:

- Cooling process has begun shortly after sampling event and out of temperature condition acceptable by NELAC 5.5.8.3.1.a.1.

- Initial and Backup Temperature confirm out of temperature conditions

- Client understands and would like to proceed with analysis

Project Address:

Alexis Johnson:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number 419317. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. Estimation of data uncertainty for this report is found in the quality control section of this report unless otherwise noted. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 419317 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Brent Barron, II

Odessa Laboratory Manager

Recipient of the Prestigious Small Business Administration Award of Excellence in 1994.

Certified and approved by numerous States and Agencies.

A Small Business and Minority Status Company that delivers SERVICE and QUALITY

Houston - Dallas - San Antonio - Austin - Tampa - Miami - Atlanta - Corpus Christi - Latin America

CASE NARRATIVE

Client Name: Larson & Associates
Project Name: Targa Monument Gas Plant

Project ID: 2-0108
Work Order Number: 419317

Report Date: 16-JUN-11
Date Received: 06/09/2011

Sample receipt non conformances and comments:

None

Sample receipt non conformances and comments per sample:

None

Analytical non conformances and comments:

Batch: LBA-859989 Dissolved Metals by SW-846 6010C
SW6010C

Batch 859989, Magnesium recovered below QC limits in the Matrix Spike. Calcium, Potassium, Sodium recovered below QC limits in the Matrix Spike and Matrix Spike Duplicate. Selenium recovered above QC limits in the Matrix Spike Duplicate.

Samples affected are: 419317-003, -005, -007, -002, -006, -015, -004, -009, -001, -008, -012, -010, -011, -013, -014.

The Laboratory Control Sample for Magnesium, Calcium, Sodium, Selenium, Potassium is within laboratory Control Limits

Batch: LBA-860117 BTEX by EPA 8021B
SW8021BM

Batch 860117, 1,4-Difluorobenzene recovered above QC limits . Matrix interferences is suspected; data not confirmed by re-analysis
Samples affected are: 419317-012.

Batch: LBA-860261 BTEX by EPA 8021B
SW8021BM

Batch 860261, 4-Bromofluorobenzene recovered below QC limits . Matrix interferences is suspected; data confirmed by re-analysis

Samples affected are: 419317-010.

1,4-Difluorobenzene recovered below QC limits . Matrix interferences is suspected; data confirmed by re-analysis

Samples affected are: 419317-010,419317-015.

Flagging Criteria

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the MQL and above the SQL.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.
- JN** A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

BRL Below Reporting Limit.

Sample Duplicate Recovery

Project Name: Targa Monument Gas Plant

Work Order #: 419317

Lab Batch #: 859522

Project ID: 2-0108

Date Analyzed: 06/09/2011 16:30

Date Prepared: 06/09/2011

Analyst: WRU

QC- Sample ID: 419317-001 D

Batch #: 1

Matrix: Water

Reporting Units: mg/L

Sample Receipt Checklist

1. Samples on ice?	Blue	Water	No							
2. Shipping container in good condition?	(Yes)	No	None							
3. Custody seals intact on shipping container (cooler) and bottles?	Yes	No	N/A							
4. Chain of Custody present?	(Yes)	No								
5. Sample instructions complete on chain of custody?	(Yes)	No								
6. Any missing / extra samples?	Yes	(No)								
7. Chain of custody signed when relinquished / received?	(Yes)	No								
8. Chain of custody agrees with sample label(s)?	(Yes)	No								
9. Container labels legible and intact?	(Yes)	No								
10. Sample matrix / properties agree with chain of custody?	(Yes)	No								
11. Samples in proper container / bottle?	(Yes)	No								
12. Samples properly preserved?	(Yes)	No	N/A							
13. Sample container intact?	(Yes)	No								
14. Sufficient sample amount for indicated test(s)?	(Yes)	No								
15. All samples received within sufficient hold time?	(Yes)	No								
16. Subcontract of sample(s)?	(Yes)	No	N/A	XENCO Atlanta						
17. VOC sample have zero head space?	(Yes)	No	N/A							
18. Cooler 1 No.	Cooler 2 No.	Cooler 3 No.	Cooler 4 No.	Cooler 5 No.
