| Describe Cause of Problem and Remedial Action Taken.* The pump driver on (electric motor) bearings failed which transferred misalignment, heat, and vibration to the pump and mechanical seal assembly and caused subsequent seal failure. Failure of the mechanical seal allowed crude oil to escape and ignite. The release was confined inside the firewall at the facility. The fire was extinguished and the seal, motor and pipe was replaced. |

| |
|---|
| Describe Area Affected and Cleanup Action Taken. The released crude oil was contained inside the firewall of the facility. The impacted area will be remediated as per applicable NMOCD guidelines. |

| I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. |
