Application for surface commingle, Abo, Blinebry, and Paddock Pools Lea County, NM (T22S, R37, Section 23)

Dear Sirs,

Chevron U.S.A. Inc. respectfully requests administrative approval to surface commingle oil, gas, and water production from the Paddock, Blinebry, Abo, and Grayburg Pools through Chevron's OJ Boyd 2-23 Central Tank Battery. Chevron requests the approval to minimize surface disturbance and future traffic by concentrating activities at one battery. Wells producing to this battery include the OJ Boyd 2-23, 4-23, and 7-23. We will be commingling the following well to the aforementioned battery: OJ Boyd 6-23 (API#: 30-025-28449). These wells are located in Section 23, T22S, R37E in Lea County, New Mexico. This commingle will reduce the overall maintenance cost associated with the facilities at this location.

Each well will be tested monthly in the following manner. The OJ Boyd 6-23 will be added to the current header consisting of the OJ Boyd 2-23, 4-23, and 7-23. The header gives the ability to divert each well to a test separator without having to shut off production to the other wells which will continue to go to the primary 3-phase separator for these wells. The test separator will measure oil and water production via turbine type meters and gas will be measured via an electronic flow meter. Allocation will be calculated through the well test method for these wells. To reiterate, all wells will be tested on a monthly basis to ensure proper allocation.

Sincerely,

A handwritten signature in black ink that reads "Cindy Herrera-Murillo".

APPLICATION FOR COMMINGLING and OFF LEASE MEASUREMENT AT A COMMON  
CENTRAL TANK BATTERY

Proposal for commingling all oil, water, and gas for the OJ Boyd 2-23, 4-23, 6-23, & 7-23

Proposal for OJ Boyd 2-23 Central Tank Battery  
Chevron USA Inc. is requesting approval for the Commingling of oil and gas.

OJ Boyd 2-23 Central Tank Battery							
Well Names	Locations	API Numbers	Pool	Oil BOPD	Oil Gravity	Gas MCFPD	Gas BTU
OJ Boyd 2-23	23-22S-37E	30-025-10434	Paddock	1	40	15	1200
OJ Boyd 4-23	23-22S-37E	30-025-10436	Paddock	10	40	10	1200
OJ Boyd 6-23	23-22S-37E	30-025-28449	Abo	1	40	16	1200
OJ Boyd 7-23	23-22S-37E	30-025-32757	Blindbry	3	40	20	1200

**Oil & Gas metering:**

The OJ Boyd 2-23 Central Tank Battery (CTB) is the existing commingle point for all aforementioned wells except the OJ Boyd 6-23, which we are proposing to tie into the OJ Boyd 2-23 CTB. Each well will be tested monthly in the following manner. The OJ Boyd 2-23, 4-23, 6-23, and 7-23 will all be tied into a single header. All four wells will send their production to the primary 3-phase separator. The well test method will be used for each of the wells. The separator meters will be used to measure oil and water production via turbine type meters and gas will be measured via an electronic flow meter. Allocation will be calculated, as mentioned before, using the well test method for all wells. To reiterate, all wells will be tested monthly to ensure proper allocation.

These meters will be calibrated on a regular basis per API, NMOCD and BLM specifications. The BLM and OCD will be notified of any future changes in the facilities.

**Process and Flow Descriptions:**

The flow of production is shown in detail on the enclosed process flow diagram and facility diagram maps which show the lease boundaries, well locations, flow line location, CTB, and gas sales meter. The commingling of this production is the most effective economical means of producing the reserves and will not result in reduced royalty or improper measurement of production. The proposed commingling will reduce footprint, reduce traffic, and lower overall emissions.

Chevron U.S.A. Inc. understands that the requested approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument.

All royalty and overriding interest owners will be notified. Chevron is the only working interest owner.

Application for surface commingle, Abo, Blinberry, and Paddock Pools Lea County, NM (T22S, R37, Section 23)

Dear Sirs,

Chevron U.S.A. Inc. respectfully requests administrative approval to surface commingle oil, gas, and water production from the Paddock, Blinberry, Abo, and Grubb Pools through Chevron's OJ Boyd 2-23 Central Tank Battery. Chevron requests the approval to minimize surface disturbance and future traffic by concentrating activities at one battery. Wells producing to this battery include the OJ Boyd 2-23, 4-23, and 7-23. We will be commingling the following well to the aforementioned battery: OJ Boyd 6-23 (API#: 300252844900). These wells are located in Section 23, T22S, R37E in Lea County, New Mexico. This commingle will reduce the overall maintenance cost associated with the facilities at this location.

Each well will be tested monthly in the following manner. The OJ Boyd 6-23 will be added to the current header consisting of the OJ Boyd 2-23, 4-23, and 7-23. The header gives the ability to divert each well to a test separator without having to shut off production to the other wells which will continue to go to the primary 3-phase separator for these wells. The test separator will measure oil and water production via turbine type meters and gas will be measured via an electronic flow meter. Allocation will be calculated through the well test method for these wells. To reiterate, all wells will be tested on a monthly basis to ensure proper allocation.

Sincerely,

*Cindy Herrera-Munillo*
