# APPLICATION FOR POOL AND LEASE COMMINGLE & OFF-LEASE STORAGE, MEASUREMENT AND SALES

## Commingling proposal for the Corral Canyon 36-25 Battery

OXY USA INC requests approval to amend previously approved surface commingle permit CTB-856 at the Corral Canyon 36-25 Battery (Lat 32.158769, Long -103.937874, F/G-01-T25S-R29E) to include Corral Canyon 36-25 Fed Com 34H, 35H and 36H.

Train #1 off-lease storage, measurement and sales remains unchanged from CTB-856 original approval. It includes wells that are covered by the pending 720 acre Communitization Agreement which identifies the acreage and percentage of interest breakout for revenue as shown below. The oil and gas production are allocated among the Tracts based on percentage of acreage in CA area.

### Process Description for Corral Canyon 36-25 Fed Com #24H, 25H, 26H, 34H, 35H and 36H

Production from Corral Canyon 36-25 Fed Com 24H, 25H, 26H, 34H, 35H and 36H will flow off-lease to Train #2 at the Corral Canyon 36-25 Battery. Each well will initially have its own 8' X 20' three-phase production separator which will be equipped with an oil turbine meter, gas orifice meter and water turbine meter. Oil production is sent through two line heaters then to two 8' X 20' heater treaters. Oil production then flows through a vapor recovery tower. It then flows to four oil storage tanks before being pumped through two LACT meter and sent to oil sales. Oil production will be allocated back to each well based on well test.

Corral Canyon 36-25 Fed Com 24H, 25H, 26H, 34H, 35H and 36H will be tested daily prior to Range 1 of decline, and will be tested at least three times per month during Range 1 of decline. When Range 2 decline is started, the wells will be tested at least twice per month. Wells will be tested at least once per month when Range 3 of decline is started, as specified in Hearing Order R-14299.

Gas production from all wells will be combined after the individual three-phase separators. It will then flow through an Oxy check meter, which will serve as the gas FMP for the purpose of royalty payment, then sent to sales.

All water from the Corral Canyon 36-25 Battery will be sent to the Corral Fly Water Disposal System.

#### **Additional Application Components**

The flow of production is shown in detail on the enclosed facility diagram. Also enclosed is a map detailing the lease and unit boundaries, well and battery locations.

The oil and gas meters will be calibrated on a regular basis per API, NMOCD and BLM specifications.

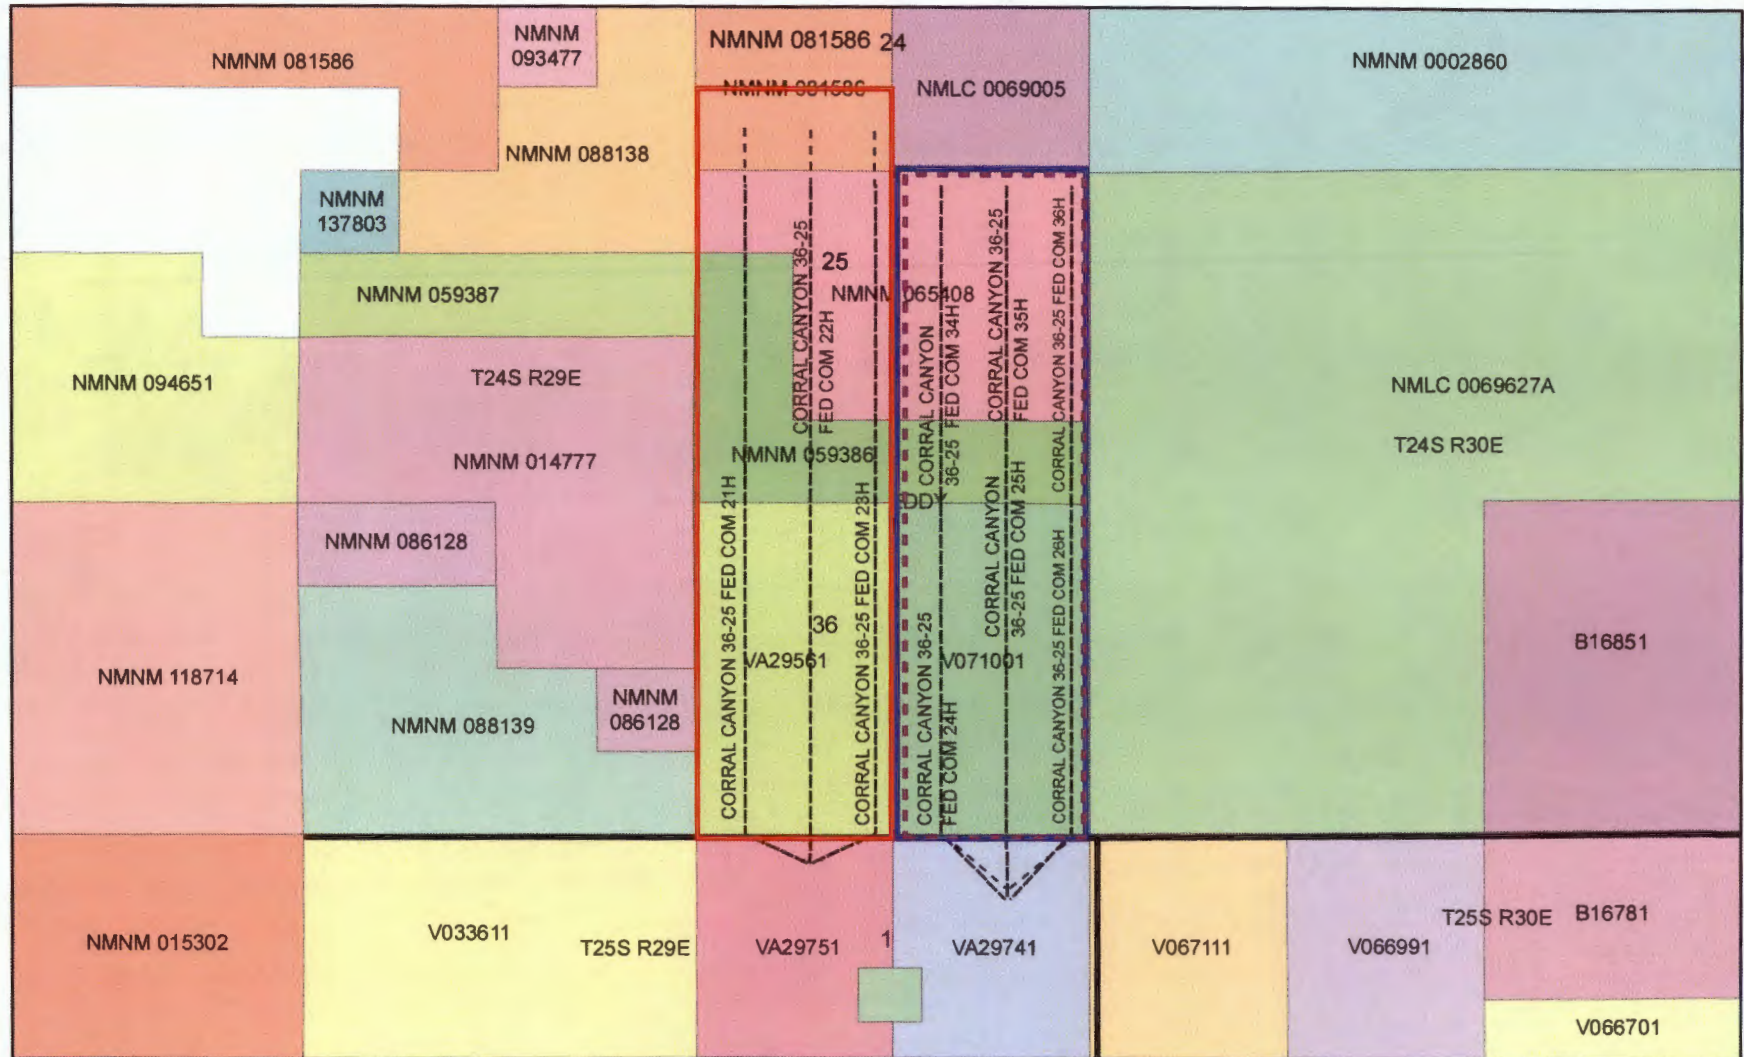

Pursuant to Statewide rule 19.15.12.10(C)(4)(g) OXY USA INC requests the option to include additional pools or leases within the defined parameters set forth in the Order for future additions.

Commingling this production is the most effective means of producing the reserves. The surface commingle application will be submitted separately for approval per NMOCD and BLM regulations.

OXY USA INC understands the requested approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument. The surface commingle application will be submitted separately for approval per SLO regulations.

The commingled oil production from the wells detailed above shall be measured and sold at the Corral Canyon 36-25 Central Tank Battery (CTB), located in Unit F of Section 1, Township 25 South, Range 29 East, NMPM, Eddy County, New Mexico.

Production from the subject wells shall be determined as follows:

It is understood that the test separator and meters are designed to accurately measure production from the wells with the highest production rate. It is also assumed that all of the oil and gas production from the wells in this application will display a hyperbolic decline, and will fit the decline parameters described in Hearing Order R-14299. Wells that are in prior to Range 1 of decline shall be tested daily. Wells that are in Range 1 of decline shall be measured with a combination of metering and well testing, and shall be tested at least three times a month. Wells that are in Range 2 of decline shall be measured with a combination of metering and well testing, and shall be tested at least twice a month. Wells in Range 3 of decline shall be measured with a combination of metering and well testing, and shall be tested at least once a month.

Oil and gas production from the Corral Canyon 36 25 Federal Com Well No. 21H, and Corral Canyon 36 25 Federal Com Well No. 22H, and Corral Canyon 36 25 Federal Com Well No. 23H shall be measured at train no. 1 at the CTB.

Oil and gas production from the Corral Canyon 36 25 Federal Com Well No. 24H, and Corral Canyon 36 25 Federal Com Well No. 25H, and Corral Canyon 36 25 Federal Com Well No. 26H shall be measured at train no. 2 at the CTB.

Further, each train is a Facility Measurement Point (FMP) for oil and gas production. After the gas is measured at its respective FMP, the production may be commingled with other production from other trains.

For future additions of wells, leases, and pools to this commingling operation, notice shall only be given to those interest owners in the wells, leases or pools to be added, in accordance with Division Rule 19.15.12.10 C (4) (g) NMAC.

OXY USA, Inc. shall provide a Sundry Notice to the Engineering Bureau in Santa Fe when a test separator is removed.

The allocation meters shall be calibrated quarterly in accordance with Rule 19.15.12.10.C (2) NMAC.

This approval is subject to like approval from the Bureau of Land Management before commencing commingling operations.

Subsequently drilled wells that produce from the subject pool within the project areas approved by this order may be added to this commingling authority by submittal of a Sundry Notice to the Engineering Bureau in Santa Fe.

The operator shall notify the Artesia District office of the Division prior to implementation of the commingling operations.
