* Production data not available on NMOCD website, production estimates are average of recorded well tests for wells since online

** Production estimates are average of first 6-month volumes for wells not online yet

The Corral Fly 02-01 State 21H - 26H and 31H - 36H production is separated, measured and stored at the Corral Fly 02-01 Central Tank Battery. The battery is equipped with 4 three-phase test separators (6' x 20') and a single main three-phase production separator (10' x 40'). The test separators are equipped with turbine meters for oil and water measurement, and an orifice meter for gas measurement. Oil production is sent from the separators to a heater-treater and vapor recovery tower, then to the oil storage tanks at the central battery before being measured through a LACT Unit (Lat 32.166241, Long -103.957527) (C-02-25S-29E) and either piped or trucked to sales. Gas production is sent from the three-phase separators through a gas scrubber then through an OXY check meter at the CTB site. Water production is sent from the three-phase separators to water tanks at the central battery, then trucked or pumped to disposal.

The Corral Fly 02-01 State 21H - 26H and 31H - 36H wells will be tested daily prior to Range 1 of decline, and will be tested at least three times per month during Range 1 of decline. When Range 2 decline is started, the wells will be tested at least twice per month, and will be tested at least once per month during Range 3 of decline, as specified in Hearing Order R-14299. Production will be allocated to each well based on monthly well test data.

In addition, the facility can add eight portable, 6' X 20' three-phase test separator kits as needed, for well testing frequency requirements.

Additional Application Components:

The flow of production is shown in detail on the enclosed facility diagrams. Also enclosed is a map detailing the lease boundaries, well and battery locations.

The oil and gas meters will be calibrated on a regular basis per API and NMOCD specifications.

The working interest, royalty interest and overriding royalty interest owners have been notified of this proposal by certified mail (see attached).

Pursuant to Statewide rule 19.15.12.10(C)(4)(g) OXY USA INC requests the option to include additional pools or leases within the defined parameters set forth in the order for future additions.

Commingling this production is the most effective means of producing the reserves. OXY USA INC understands the requested approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument. These applications will be submitted separately for approval per NMOCD regulations.
