APPLICATION FOR POOL COMMINGLE & OFF-LEASE STORAGE, MEASUREMENT AND SALES

Commingle proposal for the Cal Mon 35 Fed CTB #2

OXY USA INC requests approval to amend commingle order PC 1310A. CAL MON MDP 35 FED 1H-6H and CAL MON 35 FEDERAL 172-176H will be permanently added to the commingle permit. These wells are in the previously approved pool and section. All wells will now produce to the Cal Mon 35 Fed CTB #2 (M-26-23S-31E) and require a pool commingle and off-lease storage, measurement and sales.

Process Description:

Production is sent through an 8' x 20' three-phase production separator. Oil from the three-phase separator is directed through two 8' x 20' heater treaters before being sent to a 6' x 40' vapor recovery tower. Oil then flows to six 1000 bbl oil tanks before being pumped through one of three LACT meters (S/N 20540-11, S/N 20540-4, S/N 20540-12) and then sent to oil sales. The LACT units will serve as the oil FMPs for this CTB (oil FMP at Lat 32.2686722, Long -103.753644). A truck load FMP will be set up at the facility for use as back-up in the event of a LACT meter failure.

Oil and gas production will be allocated back to each well based on well test. For testing purposes, the facility will be equipped with six permanent 6' x 20' three-phase test separators. Each test vessel is equipped with oil turbine meters (S/N below), gas orifice meters (S/N below) and water turbine meters.

TEST SEPARATOR - V1105	TBD*	TBD*
TEST SEPARATOR - V1106	TBD*	TBD*

Wells will be tested daily prior to Range 1 of decline, and will be tested at least three times per month during Range 1 of decline. When Range 2 decline is started, the wells will be tested at least twice per month. Wells will be tested at least once per month when Range 3 of decline is started, as specified in Hearing Order R-14299. Production allocation to each well will be based on the aforementioned well tests.

The following table summarizes the decline range of each well. The facility is equipped to exceed the required testing frequency of the wells.

Gas production will be sent from the production and test separators to the gas scrubber. It will then flow through an orifice meter (S/N 17120C), which will serve as the gas FMP (gas FMP at Lat 32.2686722, Long -103.753644) for the purpose of royalty payment, then sent to sales.

All wells are on gas lift. The table below lists the gas lift meter numbers for each respective well. Estimated volume ranges from 300 MCFPD to 750 MCFPD.

CAL MON 35 FED 175H	TBD*
CAL MON 35 FED 176H	TBD*

All produced water will be sent to the Sand Dunes SWD Integration System.

The oil and gas meters will be calibrated on a regular basis per API, NMOCD and BLM specifications.

*Gas lift meter numbers to be provided upon installation.

Additional Application Components:

The flow of production is shown in detail on the enclosed facility diagram. Also enclosed is a map detailing facility, lease, and well locations.

All wells have identical ownership therefore notification was not required.

Pursuant to Statewide rule 19.15.12.10(C)(4)(g) OXY USA INC requests the option to include additional pools or leases within the defined parameters set forth in the order for future additions.

The commingling of production is in the interest of conservation and waste and will result in the most effective economic means of producing the reserves in place from the affected wells and will not result in reduced royalty or improper measurement of production. The proposed commingling will reduce operating expenses as well as reduce the surface facility footprint and overall emissions.

OXY USA INC understands the requested approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument.

OXY USA INC requests approval of a surface pool commingle at the Cal Mon 35 Fed 41H battery. Wells feeding the battery are Cal Mon 35 Fed 171H (API 30-015-44269) and Cal Mon 35 Fed 41H (API 30-015-43140). The oil production will be measured through a LACT, which will serve as the Facility Measurement Point (FMP). Production will then be allocated to each well based on well test and the amount of hours the well was operating in a given month. Gas production will be separated and measured through an Oxy check meter, which will serve as the FMP. All water will be sent to the Cal Mon 5 salt water disposal well (SWD). The BLM's interest, 12.5%, is identical in all wells.

APPLICATION FOR POOL COMMINGLE

Commingle proposal for Cal-Mon 35 Federal 41H Battery

OXY USA INC requests approval of a surface pool commingle at the Cal-Mon 35 Federal 41H battery. The wells feeding the battery are listed below.

The oil production will be measured through a LACT (S/N 14465558, Lat 32.2674 Long -103.754), which will serve as the Facility Measurement Point (FMP). Production will then be allocated to each well based on well test and the amount of hours the well was operating in a given month.

Gas production will be separated and measured through an Oxy check meter (S/N 117149, Lat 32.2674 Long -103.754), which will serve as the FMP.

All water will be sent to the Cal Mon 5 salt water disposal well (SWD).

A detailed process description can be found below. The oil and gas meters will be calibrated on a regular basis per API, NMOCD and BLM specifications.

The BLM's interest, 12.5%, is identical in all wells.

Well	API	Location	Date Online	BOPD	OIL GRAVITY	MSCFD	BTU/cf	BWPD
POOL: WILDCAT WOLFCAMP (98236) - NMNM19199								
Cal Mon 35 Fed 171H	30-015-44269	D-35-T23S-R31E	Est. 10/25/2017	505#	44	902#	1300	1396#
POOL: COTTON DRAW; BONE SPRING (13367) - NMNM19199								
Cal Mon 35 Fed 41H	30-015-43140	D-35-T23S-R31E	Est. 10/25/2017	694#	43	1369#	1250	877#

Each of the two wells at the Cal-Mon 35 Federal 41H battery will have a dedicated 6' X 20' three-phase separator. Each vessel will be equipped with oil turbine meters (S/N 74546 & S/N 75067), gas orifice meters (S/N 109658 & S/N 119217), and water turbine meters (S/N 2089268717 & S/N 72627). Oil production will flow through a 6' X 20' heater treater then sent to three oil storage tanks. It will then be pumped through a LACT (FMP, S/N 14465558) and trucked to sales.

Each well will be tested daily prior to Range 1 of decline, and will be tested at least three times per month during Range 1 of decline. When Range 2 decline is started, the wells will be tested at least twice per month, then will be tested at least once per month during Range 3 of decline, as specified in Hearing Order R-14299.

Gas will be sent from the separators to a gas scrubber. It will then flow through an Oxy check meter (S/N 117149), which will serve as the gas FMP for the purpose of royalty payment, then sent to sales.

All water from the Cal Mon 35 Federal 41H Battery will be sent to the Cal Mon 5 SWD for disposal.

Additional Application Components:

The flow of production is shown in detail on the enclosed facility diagram. Also enclosed is a map detailing the lease boundaries, well and battery locations.

The working interest, royalty interest and overriding royalty interest owners are identical, so notice was not required.

Pursuant to Statewide rule 19.15.12.10(C)(4)(g) OXY USA INC requests the option to include additional pools or leases within the defined parameters set forth in the order for future additions.

After completion of facility modifications, OXY will provide BLM with an updated facility diagram.

Commingleing this production is the most effective means of producing the reserves. OXY USA INC understands the requested approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument. These applications will be submitted separately for approval per NMOCD and BLM regulations.

Oxy respectfully requests permission to temporarily commingle gas from the Cal Mon MDP1 35 Federal 1H at the Cal Mon 35-41 CTB. Production is from existing leases and pools listed on previously approved commingle approval PC-1310 A. This is in addition to the previously approved Cal Mon MDP1 35 Federal 5H and 6H wells oil and gas production temporarily being routed to this facility. All three wells will cease being commingled at this battery once the Cal Mon CTB#2 is ready to accept fluids.
