APPLICATION FOR POOL AND LEASE COMMINGLE

Corral Canyon 10E Tank Battery

XTO requests approval for the new Corral Canyon 10E Tank Battery NWNE, Sec 10, 25S-29E (LAT / LONG: 32.150085, -103.969909). Wells flowing the battery are listed on a separate attachment:

PROCESS FLOW DESCRIPTION AND ALLOCATION

The flow of production is shown in detail on the enclosed facility diagram. Also enclosed is a map detailing the lease boundaries, well locations and battery location. Initially, the facility will be constructed so each new well will have separate measurement using a 3-phase metering separator. Each metering separator will be equipped with a Coriolis test meter, gas orifice meter and water turbine meter. Measurement will transition to a bulk and test method as future wells are completed and existing well production has reached Range 3 of decline. At this range, wells will be tested at least once per month (based on the attached decline curves as specified in Hearing Order R-14299).

As the facility transitions to a bulk and test method, the wells are routed from their respective locations to a header at the battery. The header is configured so wells are directed to either a test separator or a bulk production separator. The battery will be constructed with ten (10) horizontal 3-phase test separators. Each test separator will be equipped with a Coriolis test meter, gas orifice meter (EFM) and water turbine meter. After the test separators, oil production will be combined with the oil from the bulk production separator, sent through a horizontal heater treater, vapor recovery tower and then on to the oil storage tanks. From the tanks, the oil is will be sold through a LACT meter into the crude pipeline. Oil production will be allocated daily using a factor derived from the volume recorded on the Coriolis test meter and the LACT meter readings.

For wells that are not in test, production will be routed to a horizontal 3-phase bulk separator. Production from the bulk separator will be combined in the common oil line with the oil from the test separators (after metering) and sent to the storage tanks.

The LACT meter will be the custody transfer and royalty settlement point for oil.

Gas production from all wells will follow the same separation and measurement process as oil. Gas will be allocated daily based on the factor derived using the volume recorded on the EFM test/allocation meter on the test separators and the volume recorded on the gas sales meter. The gas sales meter will be the point of custody transfer and royalty settlement.

Gas can also be directed to a (metered) flare on location, downstream of the allocation meters, in case of emergency or restricted pipeline capacity.

All water from the batteries is metered from the test separators using a turbine meter. Water will be stored in fiberglass tanks at the battery then sent.

SUMMARY:

The oil and gas meters will be installed, proven and calibrated upon installation and on a regular basis thereafter per API and NMOCD specifications.

The working interest, royalty interest and overriding royalty interest owners have been notified of this proposal by certified mail (see attached).

Pursuant to Statewide rule 19.15.12.10(C)(4)(g) XTO requests the option to include all future wells drilled in these pools and leases.

The commingling of production is in the interest of conservation and minimizing waste and will result in the most effective and economic means to maximize the ultimate economic recovery of the reserves in place from the affected wells. The proposed commingling and allocation will not result in reduced royalty or improper measurement. The proposed commingling will reduce the surface facility footprint and overall emissions.

XTO understands the requested approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument

There is no deduct based on API for crude oil at the Corral Canyon 10E

Price for MMBTU is the combined BTU value at the sales meter. There are no deductions based on quality or sulfur content. Given the similarity of BTU contents, there should be no significant price difference or sensitivity to allocation factors.

Wells are still in completion stages and not producing a this time. Contract price has not been determined

Gentlemen:

Regarding the application for a pool/lease commingle for the Corral Canyon 10E Battery, the production decline of the wells is in accordance with the production decline presented in Order R-14299.

The ranges of decline and recommended testing schedule is:

Range 1 = 0-3 months, testing at least three (3) times a month for 24 hrs

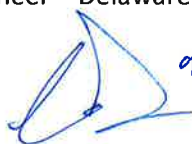

Range 2 = 3-12 months, testing at least twice a month for 24 hrs

Range 3 = 12+ months, testing monthly for 24hrs

The facility will be utilizing allocation by test to meet future growth.
