Brian,

Do you know if Longwood still wishes to pursue this application? I reached out in February for additional information and never received a response. If I don't hear anything by 12/11/20, then I will assume that the application is no longer wanted and I will cancel the submission. If you have any questions or concerns feel free to reach out.

Kind regards,

Baylen Lamkin

Brian,

I am reviewing the C-108 for the subject well and I noticed a couple of issues that would speed things up if they were rectified. We are requesting an induced seismicity analysis be conducted for these high volume Devonian wells with historical analysis, fault slip potential, and risk analysis included. Additionally, it may be required that the casing design be modified to reflect that the cement behind the 9.675" casing be circulated to the surface. If these items can be provided it will make the review process move quicker on our end. Please let me know if you have any questions or concerns.

Kind regards,

Baylen Lamkin
