

MALLON OIL COMPANY

1099 18th Street, Suite 2750, Denver, Colorado 80202 (303) 293-2333

September 4, 1990

Mr. Jerry Sexton New Mexico Oil Conservation Division P. O. Box 1980 Hobbs, New Mexico 88240

RE: Commingled Production Mobil "5" State #1 SV/4 SE/4, Sec. 5, T175, R36E Lea Co., New Mexico

Dear Mr. Sexton:

Enclosed please find a copy of Mallon's request for downhole commingling of Blinebry and Lower San Andres production from our Mobil "5" State #1 well. This request has been filed with the New Mexico Oil Conservation Division, Santa Fe Office.

Our plans include opening additional perforations in the Lower San Andres and swab testing prior to removing the retrievable bridge plug presently set between the two zones. A sundry notice covering the proposed work has been filed with your office. Judging from the results of the low permeability Lowwer San Andres intervals opened thus far, we do not anticipate any great change in the productivity of the Lower San Andres. Should swab testing indicate that fluid production rates would be likely to exceed the guidelines set forth in Section 303-C 1-(a)-(1) or 303-C 1-(a)-(3)we will contact your office before commingling.

We request a 30 day interim authority to commingle production from the zones while the attached request is being processed.

Please feel free to call with any questions...

Sincerely,

MALLON OIL COMPANY

~ ~/

Joe H. Cox Jr. Production Manager

G-L CONSCRIPTION DIVISION

RECEIVED

APPLICATON FOR DOWNHOLE COMMINGLING 90 SEP 10 AM 9 37

OPERATOR: Mallon Oil Company 1099 18th St., Ste. 2750 Denver, CO. 80202

LEASE NAME: Mobil "5" State

WELL NUMBER: #1

FSL, 1750' FEL, Sec. 5, T17S, R36E LOCATION: 760' Lea County, New Mexico

POOLS Undesignated - Blinebry, Undesignated - Lower San Andres

OWNERSHIP OF ACREAGE OFFSETTING SPACING UNIT TO BE COMMINGLED: (See Attached Plat)

BOTTOM HOLE PRESSURES:

Blinebry

A drill stem test across a portion of the completed interval in the Blinebry (test interval 7243-7290') recorded a maximum shut-in pressure of 2443 psi. A After 44 days producing on rod pump a 72 hour bottom hole pressure build up was measured at 7238' recording a maximum pressure of 357 psig. Although conventional analysis is questionable on the final portion of the buildup curve on extrapolated "p*" of 1062 psi is estimated...

The producing bottom hole pressures of the zone has remained at just the gas gradient plus about 30 psi CP since just after pumping began as indicated by fluid level shots.

Lover

San Andres: No shut in bottom hole pressures have been measured. The isolated producing interval has remained "pumpedoff" since immediately after pump testing began, 8/17/90, as indicated by fluid level shots.

FLUID CHARACTERIESTCS:

Produced fluids do not appear to be incompatible. (See attached analyses). No uncontaminated L. San Andres water sample has been available.

VALUE OF COMMINGLED vs. ISOLATED PRODUCTION:

Both of the oils fall in the West Texas - Southeast New Mexico/Sour category due to the measured sulphur contents. Gravity adjustments will depend upon the proportion of each oil produced and would bring the gravity closer to the 34 degree penalty break point. An overall increase in price should be seen since the Blinebry oil is 1.3 degrees API above the break point.

Examples: Isolated Blinebry Production Gravity = 35.3 degrees API (No penalty) 8/17/90 Price (Texaco Bulletin 90-67) \$25.00/Bbl.

> Isolated Lower San Andres Production Gravity = 28.9 degrees API (Deduct \$0.765/Bbl) 8/17/90 Price \$25.00 - 0.765 = \$24.235/Bbl

> Combined Blinebry - Lower San Andres (50/50) Est. Gravity = 32.1 degrees API (Deduct \$0.285/Bb1) 8/17/90 Price \$25.00 - 0.285 = \$24.715/Bb1

Average value of separately produced oils = (\$25/Bb1 + 24.235/bb1) /2 = \$24.618/Bb1

OWNERSHIP OF COMMINGLED ZONES:

Both zones are spaced on a 40 acre tract which falls wholly within State Lease B-3009, which has been farmed out from Mobil Exploration and Production U.S. Inc. Working interest ownership for the well has remained consistent throughout all work to date, as have royalty and overriding royalty interests.

EFFECT OF COMMINGLING ON SECONDARY RECOVERY:

Neither the Blinebry or Lower San Andres produce within several miles of the Mobil "5" State #1. The pressure buildup test from the Blinebry indicates a limited, closely bounded reservoir. If this is the case it is unlikely to be a secondary recovery candidate. The Lower San Andres does not appear from production data to date to hold a great deal of promise for development either.

PRODUCTION ALLOCATION METHOD:

Since the Blinebry has the best historical basis, the projected Blinebry production stream will be used as the basis for allocation. The attached Blinebry curve is based on July 05 to Aug. 05, 1990 oil production instantaneous, nominal annual decline of 98.468% projected hyperbolically with "shaping factor", n = 1.6.

The difference between the actual production and the projected Blinebry production will be assumed to be from the Lower San Andres interval. A first year table of the projected monthly Blinebry production begining September 1990 will follow, (an adjustment for "flush production" from the Blinebry buildup since temporarily plugging back August 10, 1990 will probably be necessary during September 1990 and will be made based on swab test data from the Lower San Andres and projected Blineby production). Gas will be allocated based on a ratio of the calculated volumes for each zone (based on GOR) times the actual production.

Projected Blinebry Production

9/90 552 BO 10/90 467 BO 11/90 409 BO 12/90 367 BO 1/91 335 BO 2/91 309 BO 3/91 288 BO 4/91 270 BO 5/91 254 BO 6/91 242 BO 7/91 230 BO 8/91 220 BO

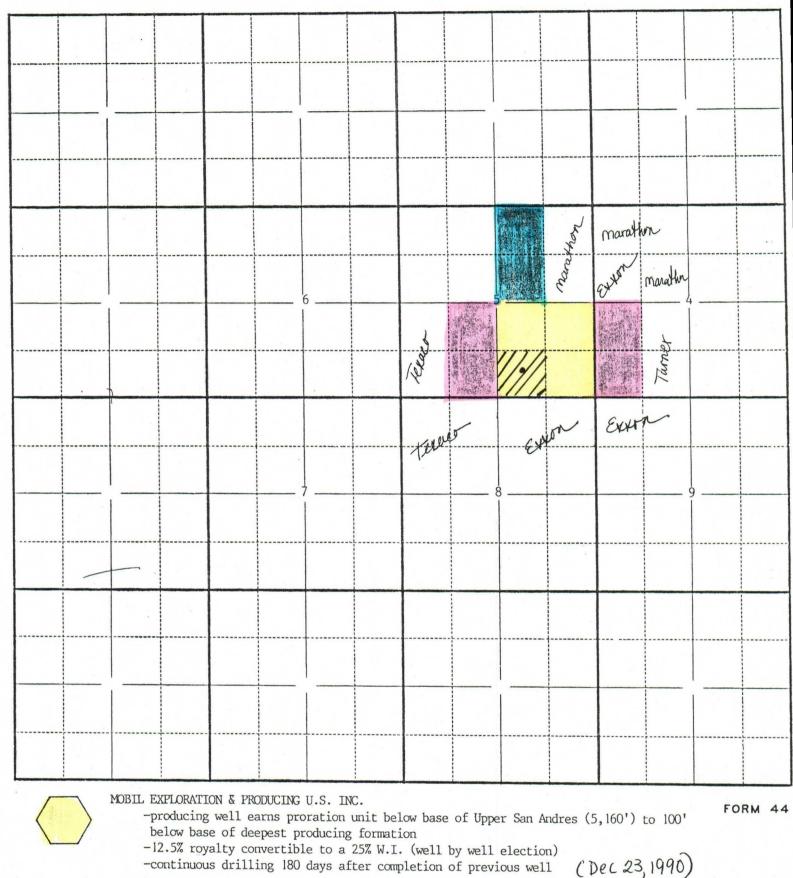

OFFSETING OPERATORS AND LEASE OWNERS:

Letters notifying all holders of acreage offsetting the proposed commingled spacing unit have been sent, copies are attached.

ADDITIONAL FACTOR IN COMMINGLING REQUEST:

The Mobil farmout agreement stipulates that after the assignments are prepared, after 60 consecutive days of non-production Mallon Oil Company will relinquish all rights below the deepest producing formation. This could lead to the non-production of the Blinebry reserves if commingling was not possible and the costs of squeezing the Lower San Andres or dual completing the zones was prohibitive.

A 180 day continuous drilling obligation under the farmout agreement will require the spudding of a second earning well by December 23, 1990 to keep the agreement effective. This factor prompted the Lower San Andres recompletion work to further evaluate the acreage.

OXY USA INC. (option)

-initial OXY option well drilled within 180 days from drilling rig release of Mobil well (Nov. 18,1990 -producing well earns 80 acres below 6500' to 100' below depth drilled

-12.5% royalty convertible to a 25% WI. (well by well election)

-continuous drilling 180 days after completion of previous well

-2nd option well 180 days from drilling rig release of OXY initial well

-producing well earns proration unit from base of upper San Andres to base of Abo or depth drilled whichever lesser

- -12.5% royalty convertible to a 25% WI (well by well election)
- -initial Phillips option well drilled within 180 of TD of Mobil well (November 17, 1990) -2nd option well drilled within 90 days of TD of initial Phillips well

Mobil Exploration & Producing U.S. Inc. 12450 Greenspoint Drive Houston, TX. 77060-1911

RE: Downhole Commingling Mobil "5" State #1 SW/4 SE/4 Sec. 5, T175, R36E Lea Co., New Mexico

Dear Sir:

Mallon Oil Company has filed with the New Mexico Oil Conservation Division for permission to downhole commingle production from the Lower San Andres and Blinebry intervals 5272-5344' and 7122-7350' respectively in the above captioned reference.

The estimated combined production from the zones is 25 BOPD, 27 MCFGPD, 6 BWPD. Both zones have shown steep decline trends during isolated testing.

Any objections or comments regarding the above described commingling should be directed to the New Mexico Oil Conservation Division within 20 days of receipt of this notification. Please feel free to call Mallon with any questions you may have.

Sincerely,

MALLON OIL COMPANY
