**Subject:** Remediation Plan (1R425-20) Termination - ROC Vacuum Phillips 'B' Santa Fe EOL Site

**RE: Termination Request  
for the Rice Operating Company's  
Vacuum Phillips 'B' Santa Fe EOL Site  
Unit Letter O, Section 30, T17S, R35E, NMPM, Lea County, New Mexico  
Remediation Plan (1R425-20) Termination**

Dear Mr. Conder:

The New Mexico Oil Conservation Division (OCD) has received Rice Operating Company's report and request to close the above-referenced site, dated April 17, 2012 (received April 20, 2012). The report is acceptable to the OCD.

The above-referenced report, submitted in accordance with 19.15.29 NMAC (Rule 29; formally, Rule 116), indicates that Rice Operating Company has met the requirements of 19.15.29 NMAC; therefore, the OCD approves the report and hereby notifies you that the remediation plan (1R425-20) is terminated in accordance with 19.15.29 NMAC.

Please be advised that OCD approval of this report does not relieve the owner/operator of responsibility should operations pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the owner/operator of responsibility for compliance with any OCD, federal, state, or local laws and/or regulations.

If you have any questions regarding this matter, please contact me at 505-476-3489.

Edward J. Hansen

RE: Termination Request  
Vacuum Phillips 'B' Santa Fe EOL (1R425-20): UL/O, Sec. 30, T17S, R35E  
RICE Operating Company – Vacuum SWD System

Mr. Hansen:

Rice Operating Company (ROC) is the service provider (agent) for the abandoned Vacuum Saltwater Disposal (SWD) System and has no ownership of any portion of the pipeline, well, or facility. The System is owned by a consortium of oil producers, System Parties, who provide all operating capital on a percentage ownership/usage basis.

## **Background**

In 2005, ROC initiated work on the former Phillips 'B' Santa Fe EOL junction box as part of the system abandonment. The site is located in UL/O, Sec. 30, T17S, R35E. NM OSE records indicate that groundwater would likely be encountered at a depth of approximately 117 +/- feet. The site was delineated using a backhoe to collect soil samples at regular intervals, creating an 8x3x6-ft deep excavation. Each sample was field titrated for chlorides and field screened using a PID for hydrocarbons, resulting in low concentrations of each. The 6-ft sample was sent to a commercial laboratory for analysis of chloride and TPH, resulting in a chloride concentration of 25.7 mg/kg, and concentrations of gasoline range organics (GRO) and diesel range organics (DRO) below detectable limits. The excavated soil was blended on site then returned to the excavation to ground surface and contoured to the surrounding area. On 12/23/2005, the site was seeded with a blend of native vegetation and is expected to return to a productive capacity at a normal rate. The junction box final report, photo documentation, laboratory analysis, and PID sheet are attached.

**Recommendations**

Site investigation demonstrates that residual chloride and hydrocarbons in the vadose zone will not with reasonable probability contaminate groundwater in excess of NMOCD standards. This site meets the requirements of the NMOCD-approved Revised Junction Box Upgrade Work Plan (July 16, 2003). As such, ROC request termination of the regulatory file, or similar closure status.

Please contact me at (575)393-9174 if you have any questions or wish to discuss this site. Thank you for your time and consideration.

Sincerely,  
RICE Operating Company

**General Description of Remedial Action:**

This junction box was addressed

as part of the Vacuum SWD System Abandonment. After the box materials were removed, a delineation trench was made at the junction using a backhoe while soil samples were collected every ft of depth to 6 ft BGS. Chloride field tests conducted on the samples yielded low concentrations that exhibited a conclusive trend of decline with depth, indicative of unsaturated historical vadose conditions. PID screenings were also performed on the samples and yielded no VOC readings, all 0.0 ppm. The laboratory analysis of the deepest sample (6 ft) confirmed the field tests and TPH concentrations were not present within the lab's detection limits (<10.0 ppm), meeting NMOCD guidelines. The excavated soil was blended on site and then backfilled into the trench and contoured to the surrounding terrain. The disturbed surface was seeded with a blend of native vegetation and is expected to return to productive capacity at a normal rate. Since the SWD System is no longer active, a replacement box is not required at this site.

enclosures: chloride graph, photos, lab results, PID field screenings
