Artesia, New Mexico 88210

**Re: Closure Report for the COG Operating LLC., Loco Hills SWD #35-1, Unit P, Section 36, Township 17 South, Range 30 East, Eddy County, New Mexico.**

Mr. Bratcher:

Tetra Tech, Inc. (Tetra Tech) was contacted by COG Operating LLC. (COG) to assess a spill from the Loco Hills SWD #35-1 located in Unit P, Section 36, Township 17 South, Range 30 East, Eddy County, New Mexico (Site). The spill site coordinates are N 32.78548°, W 103.91982°. The site location is shown on Figures 1 and 2.

### **Background**

According to the State of New Mexico C-141 Initial Report, the leak was discovered on August 2, 2010, and released approximately fifty (50) barrels of produced water from the 8" PVC slip joint. To alleviate the problem, COG personnel replaced the PVC fill line. Zero (0) barrels of standing fluids were recovered. The spill initiated inside of a lined facility and 1 bbl of produced fluid was contained. The majority of fluids released outside the facility dike and migrated south in the pasture for a distance of approximately 330', with an average width of 3.0' wide and migrated into an area measuring approximately 135' x 190'. The initial C-141 form is enclosed in Appendix A.

### **Groundwater**

No water wells were listed within Section 36. According to the NMOCD groundwater map, the average depth to groundwater in this area appears to be greater than 300' below surface. The average depth to groundwater map is shown in Appendix A.

Tetra Tech

1910 North Big Spring, Midland, TX 79705

Tel 432.682.4559 Fax 432.682.3946 [www.tetratech.com](http://www.tetratech.com)

## Regulatory

A risk-based evaluation was performed for the Site in accordance with the New Mexico Oil Conservation Division (NMOCD) Guidelines for Remediation of Leaks, Spills and Releases, dated August 13, 1993. The guidelines require a risk-based evaluation of the site to determine recommended remedial action levels (RRAL) for benzene, toluene, ethylbenzene and xylene (collectively referred to as BTEX) and total petroleum hydrocarbons (TPH) in soil. The proposed RRAL for benzene was determined to be 10 parts per million (ppm) or milligrams per kilogram (mg/kg) and 50 ppm for total BTEX (sum of benzene, toluene, ethylbenzene, and xylene). Based upon the depth to groundwater, the proposed RRAL for TPH is 5,000 mg/kg.

## Soil Assessment and Analytical Results

On August 9, 2010, Tetra Tech personnel inspected and sampled the spill area. A total of eleven (11) auger holes (AH-1 through AH-11) were installed using a stainless steel hand auger to assess the impacted soils. Select samples were analyzed for TPH analysis by EPA method 8015 modified, BTEX by EPA Method 8021B and chloride by EPA method 300.0. Copies of laboratory analysis and chain-of-custody documentation are included in Appendix B. The sampling results are summarized in Table 1. The auger hole locations are shown on Figure 3.

Referring to Table 1, all the submitted samples were below RRAL for TPH and BTEX. The chloride impact was not vertically defined in the areas of AH-4, AH-5, AH-6, AH-7, AH-9, AH-10, and AH-11. The remaining auger holes were defined and showed a shallow impact to the soils.

On November 5, 2010, Tetra Tech personnel supervised the installation of a soil bores (SB-1 through SB-7) utilizing an air rotary drilling rig. The soil boring locations are shown in Figure 3. The area of AH-8 was not drilled due to access issues at the site. The soil borings were extended to a depth from 20' to 40' below surface, with samples collected at 2 to 3 foot intervals for the first 10 feet, 5 foot intervals to 30' and 10 foot intervals thereafter and submitted to the laboratory for chloride analysis. Copies of laboratory analysis and chain-of-custody documentation are included in Appendix C. The sampling results are summarized in Table 1.

Referring to Table 1, all the soil borings installed were vertically defined. The soil borings (SB-1, SB-2, SB-3, SB-4, SB-6 and SB-7) did show a impact to the soil at depth ranging from 1.0' to 10.0' below surface. The

**TETRA TECH**

deepest chloride impact was encountered in the area of SB-5, with elevated chloride concentrations greater than 5,000 extending down to 15.0' and declining to 264 mg/kg at 25.0' below surface.

### **Closure Activities**

Based on the approved work plan, Tetra Tech personnel supervised the excavation of the site. The final excavation depths of the soil remediation were met as stated in the approved work plan. A total of 6,240 cubic yards of soil were excavated and hauled away for proper disposal. The excavation depths are highlighted in Table 1 and shown on Figure 4. Once excavated to the appropriate depths, the excavation was backfilled with clean soil to grade.

Based on the remedial activities performed, COG request closure of the site. A copy of the C-141 (Final) is included in Appendix A. If you have any questions or comments concerning the remedial activities, please call at (432) 682-4559.

Respectfully submitted,

8" PVC slip joint broke off the 8" inlet auto valve. All repairs on the PVC fill line have been made.

Describe Area Affected and Cleanup Action Taken.\*

Tetra Tech personal inspected the site and collected samples to define the spills extent. The areas that exceeded the RRAL were excavated to approximately 2.0-10.0' below surface. The impacted material was removed and hauled away for proper disposal. The site was then brought up to surface grade with clean backfill material. Tetra Tech has prepared a closure report and submitted it to the NMOCD for review.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations:

Was a Watercourse Impacted?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If YES, Volume Impacting the Watercourse.			

If a Watercourse was Impacted, Describe Fully.\*

Describe Cause of Problem and Remedial Action Taken.\*

8" PVC slip joint broke off of the 8" inlet line valve. All repairs on the PVC fill line have been made.

Describe Area Affected and Cleanup Action Taken.\*

Initially 50bbls of produced water was released from the fill line at the SWD tanks. 1bbl of the produced water was contained inside the lined facility walls. This contaminated gravel was removed and replaced with clean gravel. The other 49bbls were released outside of the dike wall and ran west of dike and off location with a total spill area of 3 yards x 150 yards. Tetra Tech will sample the spill site area to delineate any possible contamination from the release and we will present a remediation work plan the to NMOCD for approval prior to any significant remediation work.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

This report consists of a total of 45 pages and shall not be reproduced except in its entirety, without written approval of TraceAnalysis, Inc.

**B** - The sample contains less than ten times the concentration found in the method blank.

## Case Narrative

Samples for project COG/Loco Hills SWD #1 were received by TraceAnalysis, Inc. on 2010-08-13 and assigned to work order 10081702. Samples for work order 10081702 were received intact at a temperature of 18.0 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep Batch	Prep Date	QC Batch	Analysis Date
BTEX	S 8021B	62422	2010-08-20 at 12:00	72835	2010-08-21 at 17:17

TPH GRO	S 8015 D	62422	2010-08-20 at 12:00	72808	2010-08-21 at 17:46
TPH GRO	S 8015 D	62423	2010-08-21 at 17:00	72815	2010-08-22 at 11:05

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 10081702 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

Samples were received on ice.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

This report consists of a total of 27 pages and shall not be reproduced except in its entirety, without written approval of TraceAnalysis, Inc.

---

Dr. Blair Leftwich, Director  
Dr. Michael Abel, Project Manager

**Standard Flags**

**B** - The sample contains less than ten times the concentration found in the method blank.

## Case Narrative

Samples for project COG/Loco Hills SWD #35 were received by TraceAnalysis, Inc. on 2010-10-07 and assigned to work order 10100710. Samples for work order 10100710 were received intact at a temperature of 3.4 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep Batch	Prep Date	QC Batch	Analysis Date
Chloride (Titration)	SM 4500-Cl B	63774	2010-10-11 at 10:21	74376	2010-10-13 at 14:50
Chloride (Titration)	SM 4500-Cl B	63774	2010-10-11 at 10:21	74377	2010-10-13 at 14:51
Chloride (Titration)	SM 4500-Cl B	63774	2010-10-11 at 10:21	74378	2010-10-13 at 14:52
Chloride (Titration)	SM 4500-Cl B	63774	2010-10-11 at 10:21	74379	2010-10-13 at 14:53
Chloride (Titration)	SM 4500-Cl B	63790	2010-10-12 at 10:00	74380	2010-10-13 at 14:54
Chloride (Titration)	SM 4500-Cl B	63790	2010-10-12 at 10:00	74381	2010-10-13 at 14:55

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 10100710 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.
