Subject: Stage 1 Abatement Plan

Glenn,

AP-119 Stage 1 Workplan: Proposal

Basin Environmental will check the integrity and depth of the wells, as well as the depth of the water using the "as-built" well construction diagrams. If it is determined that these monitor wells are capable to yield viable water samples, Basin Environmental will purge and sample the wells and analyze the ground water for BTEX and carbon tetrachloride using standard EPA procedures and test methods. These wells will be monitored and sampled on a quarterly basis.

Thank you,

David Sherman
