Re: Application for Non-Standard Location
Basin Fruitland Coal
San Juan 32-8 # 267
Unit Letter A, Section 23 T32N-R8W
61' FNL & 391' FEL
San Juan County, New Mexico

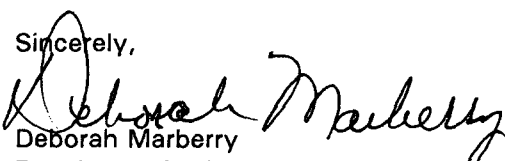

Mr. Stogner:

ConocoPhillips plans to drill the San Juan 32-8 # 267 located 61' FNL and 391' FEL, Section 23, T32N, R8W, San Juan County, New Mexico in 2006. The well will be drilled to access Fruitland Coal reserves from the NE/4 of Section 23. The current reservoir pressure in the area is 1500-1600 psi. The infill well is required to ensure complete drainage of remaining Fruitland Coal reserves. The offset drillblock to the north is operated by ConocoPhillips and the offset drillblock to the east is operated by Burlington.

Due to the topography (Wilmer Canyon) located in the NE/4 of Section 23 the well will require a surface location at 61' FNL and 391' FEL. Please see the attached letter from Gordon Chenault, Chenault Consulting Inc., stating: "The variation in elevation and the multitude of prominent drainages in this quarter section only provided two areas for the staking of a location. One is the proposed NSL location and the other was staked at 853' FNL and 748 FEL with 2,135' of access road, which the BLM would not allow"

There are currently no other wells present in the NE/4 Section 23 therefore there is no opportunity to drill from an existing well pad or expand an existing well pad. A horizontal well is not recommended due to the presence of multiple coal seams. Additional drilling/completion costs, possible completion and operational problems, and anticipated high water production (over 70 bbls/day) preclude the drilling of a deviated well.

ConocoPhillips respectfully requests that a non-standard location for the Fruitland Coal well be issued for the reasons cited above. If there are any questions concerning this application, please feel free to call Brad Peterson at (832)-486-2055.

Sincerely,

Deborah Marberry

Re: San Juan 32-8 #267
61 FNL 391 FEL
Section 23, T32N R8W
San Juan Co., NM

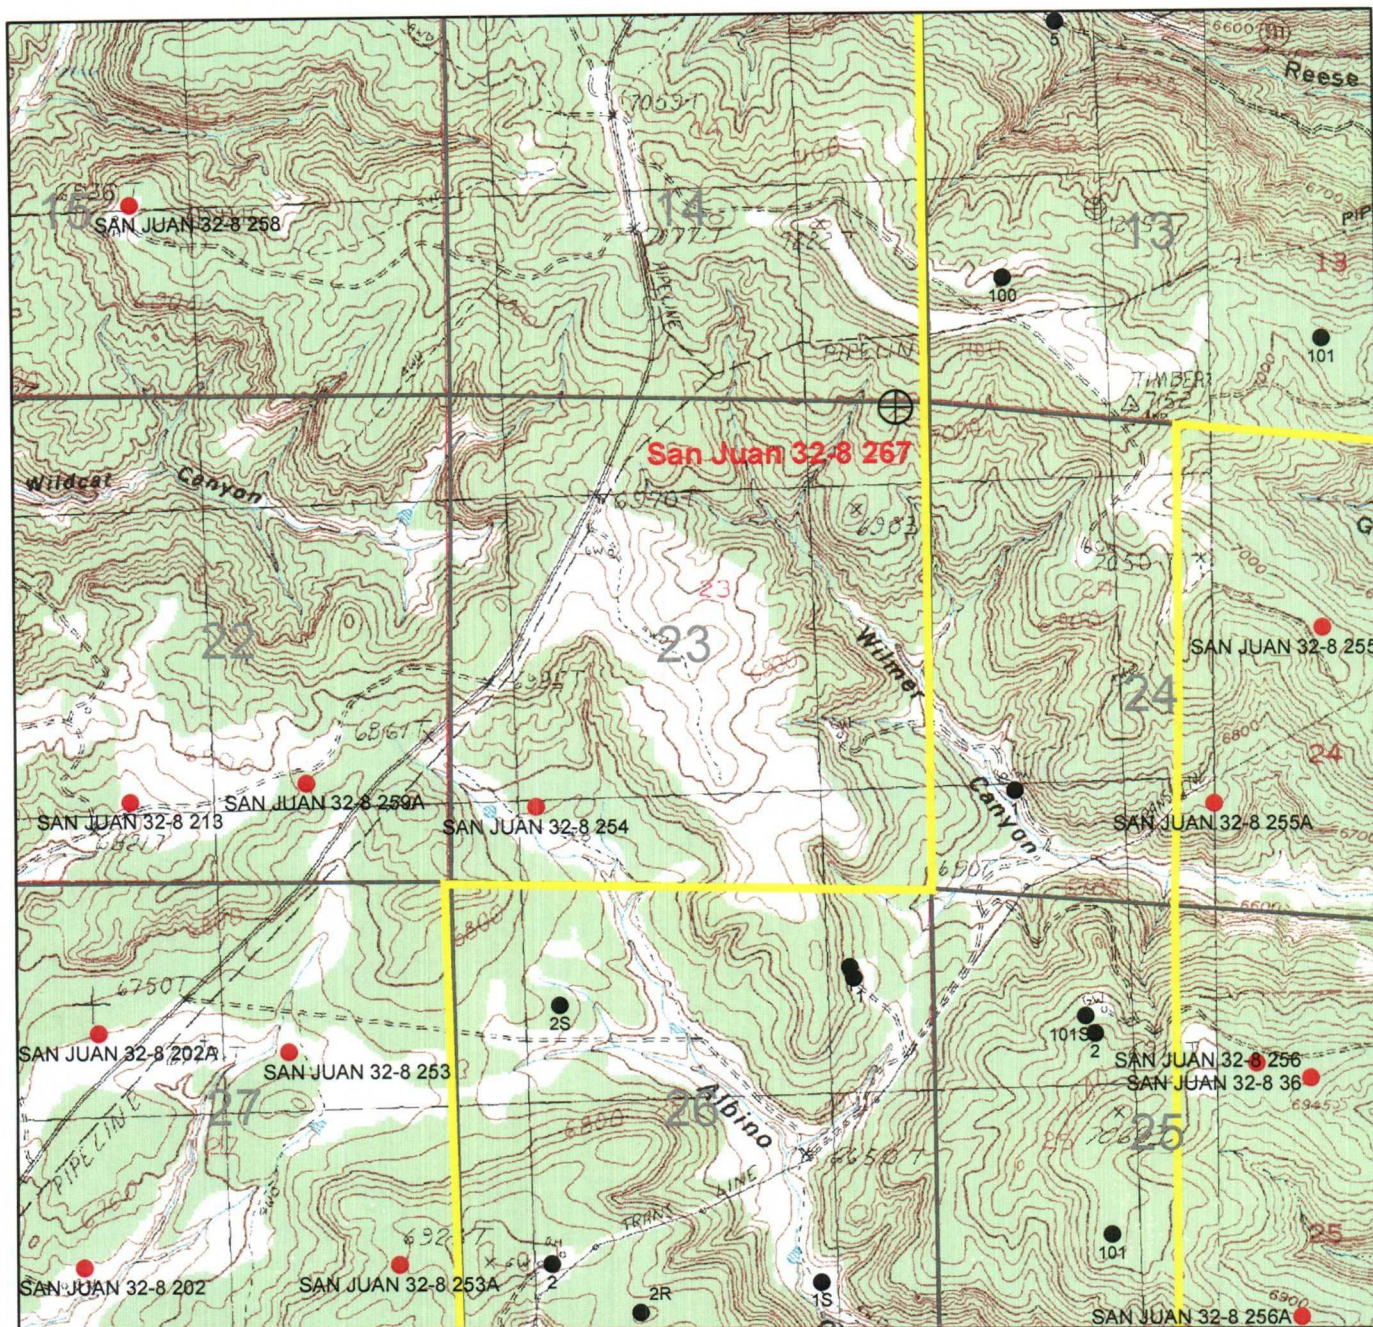

To Whom It May Concern:

The San Juan 32-8 #267 is a proposed Basin Fruitland Coal and is located inside a Federal Unit. This well was staked at 61 feet from the north line and 391 feet from the east line of Section 23, T32N R8W because of the Bureau of Land Management request that we reduce the length of the access road as much as possible. The variations in elevation and the multitude of prominent drainages in this quarter section only provided two areas for the staking of a location. One is listed above and the other was staked at 853 FNL 748 FEL with 2135 feet of access road, which the BLM wanted to move. If anyone has any questions or would like to field review the proposed well location please contact me at 505-599-3456.

Sincerely,

Gordon Chenault
