Ben: RU 229E DK/GL production Figures For
DHC permit.

Zone	GAS (mcf/d)	Oil (bbl/day)	Water (bbl/day)
DK (Ave 4/95)	69 58%	2 100%	0
GL (24 hr, 3/19/95)	50 42%	0 %	0

GL zone tested up 23/8", 4.7" for 24 hrs against 60 psig back pressure. DK produced for month of April at a separator pressure of 270 psig. Our experience w/ well head compression indicates no significant change in GL production, over the long term, by raising or lowering flowing tubing pressure. When on line the GL zone (229E) will produce @ 270 psig separator pressure.
