# COG OPERATING LLC

June 28, 2005

Fasken Center, Tower II 550 W. Texas Ave., Ste. 1300 Midland, Texas 79701

(432) 683-7443 Fax 683-7441

Michael E. Stogner Oil Conservation Division 1220 South St. Francis Drive Santa Fe, New Mexico 87505

Dear Mr. Stogner:

Pursuant to Division Rule 104.F.(2), COG Operating LLC applies for approval of an unorthodox oil well location for the following well:

Well:

M. D. Self Well No. 9

Location:

1770 feet FWL & 1350 feet FNL

Well Unit:

SENW of Section 6, Township 26 South, Range 38 East,

N.M.P.M., Lea County, New Mexico

The well will be drilled to test the Queen formation (Wildcat-Queen Pool). The pool is spaced on 40 acres, with wells to be located no closer than 330 feet to a quarter-quarter section line.

The location is based on topographical reasons. An unorthodox location is required in order to avoid disturbing an archaeological site at the original location. Attached is a land plat and other relative documentation. There are no affected offset working interest owners or royalty owners as the lease is federal lease BLM NMNM 0889 which covers the entirety of Section 6, Township 26 South, Range 38 East, as well as other acreage not herein set forth and is owned in its entirety by COG Oil & Gas LP of which COG Operating LLC is the general partner.

Should you have any questions or require any further information or clarification, please contact me at 432-685-4352 or by email at jspradlin@conchoresources.com. Again, thank you for your prompt attention to this matter.

Very truly yours,

COG OPERATING, LLC

Preston Smidh

Jan Preston Spradlin, CPL

Senior Landman

16. Project Data:

a. Records Search:

Date(s) of BLM field Review: March 28, 2005

Name of Reviewer(s): Allen Rorex

Date of ARMS Data Review: March 22, 2005

Name of Reviewer(s): Gail Wimberly

Findings (see Field Office requirements to determine area to be reviewed during records search):

The records search revealed three previously recorded sites (LA 33068, LA 33067, and LA 33066) located within a quarter-mile radius of the project. There are three sites located within a mile radius. There is one

previous inventory in the project area, listed under SNMAS-05NM-1682.

- b. Description of Undertaking: COG Operating, LLC, requested a Class III cultural resource inventory of the proposed M.D. Self Number 9 well location and access road, staked in Section 6, T.26S, R.38E, Lea County, New Mexico. The survey area staked for the proposed well location is 600 ft by 720 ft. The impact area is 300 ft by 300 ft. An area 120 ft by 720 ft was surveyed for the proposed well location, as it overlaps the M.D. Self Number 8 proposed well location, inventoried under SNMAS-05NM-1682. The proposed access road is 371 ft in length, with an impact area of 30 ft by 371 ft. The proposed access road will be used for both the M.D. Self Number 9 and M.D. Self Number 8 well locations, and the surveyed area is included under the M.D. Self Number 8 well location project (see SNMAS-05NM-1682). The proposed access road begins on an existing capped lease road and trends east 371 ft, ending on the northwest corner of the proposed well pad.
- c. Environmental Setting (NCRS soil designation: vegetative community; elevation; etc.):

The project area is located in open, rolling coppice dunes, with varied dune height/blowout depth ranging from .2 to 4 meters. Exposure is open and drainage is internal. Soils are tan/red loamy silty sands, mixed with occasional small lag gravels and/or caliche nodules. The vegetation in the project area consists of shinoak, various grasses, mesquite, yucca, prickly pear, and various annuals and other forbs. The elevation is 3,033 ft above msl.

**d. Field Methods (transect intervals; crew size; time in field, etc.):** The field crew consisted of one archaeologist. The survey for the proposed well location was conducted by walking zigzag transects (at 15-m intervals) over the staked well location. The proposed access road was inventoried by walking 15-m-interval transects, parallel to and 50 ft on both sides of the right-of-way centerline (see SNMAS-05NM-1682). Time spent in the field was 1.5 hours.

#### e. Artifacts Collected? No

17. Cultural Resource Findings: During the current inventory, two isolated occurrences were encountered. Previously recorded Site LA 33068 was not encountered during the current project. An area 100 ft to the south/southeast off the staked southeast corner of the proposed well location was inspected for cultural materials, with negative results. No further action was carried out by SNMAS as the impact area for the proposed well location is 300 ft by 300 ft, and the site is located over 100 ft outside the current project. None of the area located to the southeast should be encountered by the proposed project. Site LA 33068 was recorded by ENMU in 1975 as a lithic debitage scatter approximately 446 ft by 180 ft in size. No eligibility to the NRHP was determined by SHPO or the lead agency. ARMS provides UTM coordinates for the site datum as (NAD 1927, Zone 13) 679360 E and 3550093 N, which is located in the far southern portion of the site area plotted on BLM maps. In addition, the site area plotted on BLM maps is approximately 800 ft by 500 ft, which is much larger than the area previously reported on the LA Site Record. This site may be located further south and/or may be buried by shifting sands and/or has been misplotted on BLM topo maps. Further fieldwork would have to be carried out to locate this site and to update the actual location of cultural remains.

#### a. Location/Identification of Each Resource:

Isolate one is a manuport of opalized caliche and sandstone, looking very similar to welded soil matrix. There are possible flake scars, but this fact or how many could not be determined, and it measures  $110 \times 80 \times 70$  mm. Isolate one is located at UTM coordinates (NAD 1927, Zone 13) 679246 E and 3550229 N.

#### Page 3

Isolate two is a core of white to grey, opalized caliche, with unidirectional platforms, six flake scars, no cortex or use, and measuring  $30 \times 60 \times 40$  mm. Isolate two is located at UTM coordinates 679181 E and 3550135 N.

**b. Evaluation of Significance of Each Resource:** The research potential of these isolated occurrences is considered exhausted by field recordation.

### 18. Management Summary (Recommendations):

During the current inventory, two isolated occurrences were encountered and their research potential exhausted by recordation. Therefore, it is recommended that the proposed project proceed as planned.

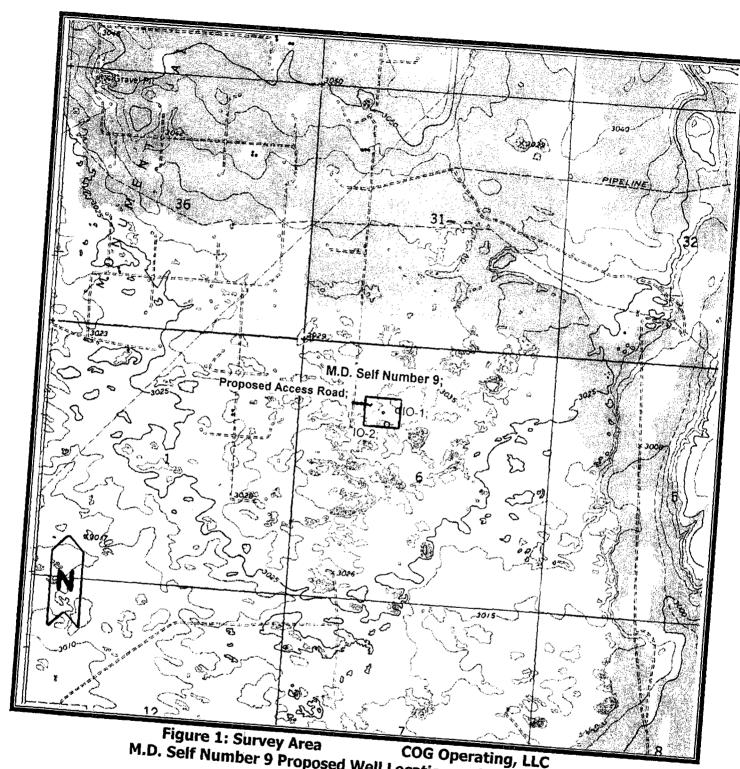

19.

I certify that the information provided above is correct and accurate, and meets all applicable BLM Standards.
