CC:
New Mexico Oil Conservation Division
Attn.: Mr. Frank Chavez
1000 Rio Brazos Road
Aztec, New Mexico 87410

Dear Mr. LeMay:

Union Oil Company of California d.b.a. UNOCAL requests approval to down-hole commingle hydrocarbon production from the Blanco Mesa Verde and Basin Dakota formations in the following Rincon Unit wells, Rio Arriba County, New Mexico.

Well	Legal Location
186M	1670' FSL, 1240' FWL, S33, T27N, R7W
187E	790' FSL, 990' FEL, S35, T27N, R7W

Both wells were drilled during the summer of 1994 and completed into the Basin Dakota. UNOCAL originally intended to complete, in addition to the Dakota, the Largo Gallup pay, however open-hole logs indicated poor Gallup net pay. It is UNOCAL's intent to complete the 186M and 187E into Mesa Verde, produce both zones up one string of 2-3/8" tubing, combine oil/condensate production into one 300 bbl stock tank and meter gas through one custody transfer meter. UNOCAL will flow test each Mesa Verde zone in order to establish a stabilized oil, gas and water production rate. The rates from these test in conjunction with established rates from the Dakota will be used to calculate an allocation factor. Royalty rates for both the Dakota and Mesa Verde in each well are identical.

If you have any questions in regard to this application, please contact me at (505) 632-1811 ext.14. Thank you for your consideration in this matter.

Sincerely,

Union Oil Company of California
d.b.a. UNOCAL

Supplemental Data for C-107-A, Rincon Unit Well No. 187E

Well History: The Rincon Unit Well No. 187E was originally permitted as a Dakota / Gallup dual. Due to poor reservoir quality the completion was changed to a Dakota / Mesaverde commingle. The Dakota first delivered in December 1994. Downhole commingling was approved on December 21, 1995 by Administrative Order DHC-1176. The Mesaverde was added in November of 1995 but was completed as a dual well. The Mesaverde first delivered in January 1996. Unocal plans to downhole commingle this well as it will allow liquids to be removed with greater efficiency. The well work is planned for July, 1999.

Allocation of Production: Unocal proposes to use a fixed allocation based on the last 26 months of production history. Over this period of time the Mesaverde has consistently averaged 14% of the total gas volume produced from this well. The Dakota completion has had an additional year to produce and is now beginning to exhibit a flattening trend in the annual decline that is compatible with the Mesaverde. Unocal feels this percentage accurately represents the production capabilities of these two horizons.

and;

~~Rincon Unit Well No. 186M~~
Unit P, Section 35;

both in Township 27 North, Range 7 West, NMPM, Rio Arriba County, New Mexico.

Commingling of Basin Dakota (Prorated Gas 71559) and
Blanco Mesaverde (Gas 72319) Pools.

Dear Mr. Liggett:

Reference is made to your recent application for an exception to Rule 303-A of the Division Rules and Regulations to permit the subject well to commingle production from both pools in the wellbore.

It appearing that the subject well qualifies for approval for such exception pursuant to the provisions of Rule 303-C, and that reservoir damage or waste will not result from such downhole commingling, and correlative rights will not be violated thereby, you are hereby authorized to commingle the production as described above and any Division Order which authorized the dual completion and required separation of the two zones is hereby placed in abeyance.

In accordance with the provisions of Rule 303-C-4., total commingled oil production from the subject well shall not exceed 40 barrels per day, and total water production shall not exceed 80 barrels per day. The maximum amount of gas which may be produced daily from the well shall be determined by Division Rules and Regulations or by the gas allowable for each respective prorated pool as printed in the Division's San Juan Basin Gas Proration Schedule.

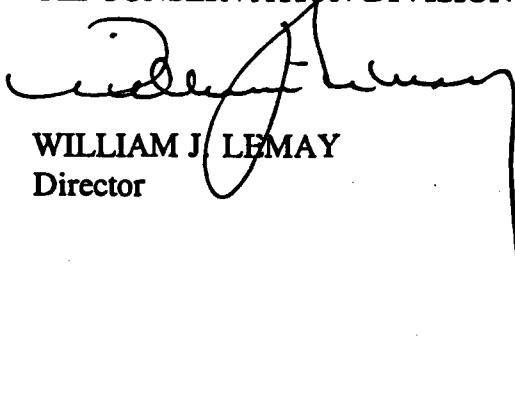

In accordance with the provisions of Rule 303-C, the supervisor of the Aztec District Office of the Oil Conservation division shall determine the proper allocation of production from the subject well following its completion.

FURTHER: The operator shall notify the Aztec District Office of the Division upon implementation of the commingling process.

Pursuant to Rule 303-C-5, the commingling authority granted by the order may be rescinded by the Division Director if, in his opinion, conservation is not being best served by such commingling.

Approved at Santa Fe, New Mexico on this 21st day of December, 1995.
