**Subject:** Remediation Plan (1R427-112) Termination - ROC EME I-1-A & I-1-C Site

**RE: Termination Request  
for the Rice Operating Company's  
EME I-1-A & I-1-C Site  
Unit Letter I, Section 1, T20S, R36E, NMPM, Lea County, New Mexico  
Remediation Plan (1R427-112) Termination**

Dear Mr. Conder:

The New Mexico Oil Conservation Division (OCD) has received Rice Operating Company's report and request to close the above-referenced site, dated April 11, 2013 (received April 12, 2013). The reports are acceptable to the OCD.

The above-referenced report, submitted in accordance with 19.15.29 NMAC (Rule 29; formally, Rule 116), indicates that Rice Operating Company has met the requirements of 19.15.29 NMAC; therefore, the OCD approves the report and hereby notifies you that the remediation plan (1R427-112) is terminated in accordance with 19.15.29 NMAC.

Please be advised that OCD approval of this report does not relieve the owner/operator of responsibility should operations pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the owner/operator of responsibility for compliance with any OCD, federal, state, or local laws and/or regulations.

If you have any questions regarding this matter, please contact me at 505-476-3489.

Edward J. Hansen

RE: Termination Request  
EME I-1-A & I-1-C (1R427-112): UL/I, Sec. 1, T20S, R36E  
RICE Operating Company – Eunice Monument Eumont SWD System

Mr. Hansen:

Rice Operating Company (ROC) is the service provider (agent) for the EME Saltwater Disposal (SWD) System and has no ownership of any portion of the pipeline, well, or facility. The System is owned by a consortium of oil producers, System Parties, who provide all operating capital on a percentage ownership/usage basis.

## **Background**

In 2001, ROC initiated work on the former I-1-A and I-1-C junction boxes. The site is located in UL/I, Sec. 1, T20S, R36E. NM OSE records indicate that groundwater would likely be encountered at a depth of approximately 26 +/- feet. To investigate the depth of chloride presence, a soil bore was installed on November 14, 2001 to a total depth of 25 ft below ground surface (bgs). Samples were collected every 5 ft and field titrated for chlorides, resulting in low concentrations. The 15 ft sample was sent to a commercial laboratory for analysis, resulting in a chloride concentration of 62 mg/kg, a DRO concentration of 22 mg/kg, and GRO and BTEX concentrations below detectable limits.

The site was delineated using a backhoe to collect soil samples at regular intervals, creating a 42x30x8.5 ft deep excavation. Each sample was field titrated for chlorides, resulting in slightly elevated concentrations. Representative samples were collected from the excavation walls and excavation bottom and sent to a commercial laboratory for analysis. The sidewall sample resulted in a chloride concentration of 128 mg/kg, a gasoline range organics (GRO) concentration below detectable limits and a diesel range organics (DRO) concentration of 404 mg/kg. The bottom composite sample resulted in a chloride concentration of 656 mg/kg, a GRO concentration below detectable limits and a

RECEIVED OCD  
2013 APR 12 P 1:22

DRO concentration of 220 mg/kg. Both samples were also analyzed for BTEX resulting in a sidewall benzene concentration below detectable limits, 0.014 mg/kg for toluene, 0.012 mg/kg for ethyl benzene and 0.19 mg/kg for total xylenes. The bottom concentration of benzene was below detectable limits, a toluene concentration of 0.015 mg/kg, an ethyl benzene concentration of 0.017 mg/kg, and a total xylenes concentration of 0.19 mg/kg.

A total of 396 cubic yards of excavated soil was properly disposed of at a NMOCD facility. A compacted clay liner was installed and the excavation was backfilled with clean imported soil to ground surface and contoured to the surrounding area. A new, watertight junction was installed.

The junction box site location map, final report, laboratory analysis, soil bore log, disposal manifests and current photodocumentation are attached.

**Recommendations**

Site investigation demonstrates that residual chloride and hydrocarbons in the vadose zone will not with reasonable probability contaminate groundwater in excess of NMOCD standards. This site meets the requirements of the NMOCD-approved Revised Junction Box Upgrade Work Plan (July 16, 2003). As such, ROC request termination of the regulatory file, or similar closure status.

Please contact me at (575)393-9174 if you have any questions or wish to discuss this site. Thank you for your time and consideration.

Sincerely,  
RICE Operating Company

Boring @ 15'	<0.025	<0.025	<0.025	<0.025	<10	22	62

General Description of Remedial Action: The site is located adjacent to an oil tank

battery with historic oily hard pan surrounding this junction box. The current battery operator

determined the junction box responsibility at this site as the 30' pipeline right-of-way. A soil boring

was completed 11/14/01 and demonstrated impact stopped before reaching groundwater.

The 15' soil sample was lab verified at 62 ppm chlorides and 22 ppm TPH. The site was delineated

to a 15' radius and 8.5' deep. The high impact soil was hauled to a permitted disposal facility

and fresh soil brought in for backfill. A clay barrier and water tight junction box was installed

and backfilled. Natural attenuation will remediate the remaining hydrocarbon.
