If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*

While replacing the H pump at the SRO 103, the transfer pump kicked on at the F.U.N. #001H battery causing it to run against the closed inlet valve at the SRO 103.

Describe Area Affected and Cleanup Action Taken.*

Initially 70bbbls of produced water were released due to a closed inlet valve. We were able to recover 65bbbls of produced water with a vacuum truck. The entire release was contained inside the lined facility. All free fluid has been recovered. Contaminated gravel has been removed and we have replaced with fresh gravel as necessary. This location has been returned to its prior condition.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
