RECEIVED
MAR -1 2012
NMOCD ARTESIA

Describe Cause of Problem and Remedial Action Taken.*
Cause:
A well in the field had just been pulled and the production tech failed to purge oxygen from the well and went straight to normal operations. This caused oxygen content in the plant to rise.
Remedial Action Taken:
Operations contacted OXY personnel in the gas gathering and measurment to determin if any wells had been put on without notifying the plant. Operations also took a portable O2 meter to check lines and determine which line the O2 was coming from.
Describe Area Affected and Cleanup Action Taken.*
N/A

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
