**Subject:** OXY-U.S. 13 Federal #2-Remediation Plan

Mike,

This e-mail is to confirm our conversation on December 18, 2013 about the remediation plan for the above referenced site. I have attached the materials that we used in our discussion. As discussed, Oxy will be allowed to close this site with no further action. As you recall and review the attached e-mail chain discussion between you, Chris Jones, and Jim Amos and the attached lab data for the resampling of SP2 at 6 inches, the contaminant levels are reduced to below guidelines allowing for no further action. Oxy appreciates your working with them to get this site to closure.

If you would please e-mail your concurrence with this remediation plan, it would be greatly appreciated.

Thanks, Cliff

OCD Tracking Number: 2RP-885 \* DOR: 8/19/11

Cliff,

As discussed, the remediation proposal submitted for cleanup of the above referenced produced fluid release is approved with the following conditions and/or stipulations:

- Notify OCD District 2 office 48 hours prior to commencement of remedial activities.
- Notify OCD District 2 office 48 hours prior to obtaining any samples where the analyses will be submitted to OCD.
- Confirmation samples are to be obtained for hydrocarbon analyses, prior to backfilling, in the areas of SP-1, SP-2, and SP-3.
- OCD approval required for backfilling excavations.
- Submit a Form C-141 Final Report and closure report upon satisfactory completion of project.
- Project is to be completed and closure documentation submitted to OCD not later than December 12, 2011.
- Like approval by BLM or any other regulatory authority as may be applicable.

Be advised, OCD approval does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that may pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, local laws and/or regulations.

If you have any questions or concerns, and for notifications, please contact me.

**Subject:** Oxy US Federal 13-2

Mike,

This e-mail is to confirm our discussion on September 13, 2011 concerning the remediation plan for the release that occurred at the Oxy US Federal 13-2. As agreed, Oxy will excavate 6 inches of the impacted soil in the spill area and in the area of SP-2, the excavation will be 1 foot and a confirmation sample will be collected to verify the hydrocarbons are below 5,000 ppm which is the NMOCD guideline. The excavation will then be backfilled with clean soil. The depth to groundwater in this area is approximately 100 feet.

I have attached the site drawing and laboratory data and a few pictures that we reviewed during our discussion for your files. If you would please reply back via e-mail with your concurrence of this remediation plan, it would be greatly appreciated.

Oxy and I thank you for your assistance in handling this matter.

Thanks, Cliff

Guys, regarding the spill at the US 13 Fed 2, I discussed this with Terry a while back, you can look through the email sting, about this site. We did and do have an approved cleanup plan, however we have had substantial growth over the past year out in the spill site. As I explained to Terry, I would hate to go through with the plan and tear up the plants that are out there and destroy cultured root systems. I would like to put this on a year monitoring as the initial spill happened almost 2 years ago and after one year the growth is good I figured another year would be a good determining guide. Your thoughts and approvals moving forward would be greatly appreciated.

**Subject:** RE: Undesirable Event: 11NU120TG, US 13 Federal 2, Cleanup Plan Approval Stipulations

Terry,

In regards to the US 13 Fed #2 an archeological survey is going to be done as soon as we can get a surveyor to do so. I want to discuss some concerns with you however. My hopes were that you had a chance to go out and look at the spill site as to get a better picture of what I was trying to explain to you on the phone. With the new growth and the continued growth in that area I would hate to go in and tear all of that out and destroy the root system of the indigenous plants and brush. That being said I would like for us to put this area in a monitoring stage instead of going ahead with the original cleanup plan. We can go ahead forward with that plan if you think that would be better but after looking at it I think we would be doing more harm than good. Let me know your thoughts as it pertains to this issue asap as we can move forward either way. I have also attached the signed written order and prevention measures we will be taking in this area. A signed copy will be mailed as well. Thanks

**From:** Gregston, Terry G [<mailto:tgregsto@blm.gov>]  
**Sent:** Wednesday, November 07, 2012 6:44 PM  
**To:** Jones, Christopher K; [mike.bratcher@state.nm.us](mailto:mike.bratcher@state.nm.us)  
**Subject:** Undesirable Event: 11NU120TG, US 13 Federal 2, Cleanup Plan Approval Stipulations

Mr. Jones,

This notification is in regard to the following location and undesirable event:

Event Number: 11NU120TG  
Event Date: 8/19/2011  
Event Name: US 13 Federal 2  
Legals: T22S/R24E, sec. 13, SENE

The submitted cleanup plan from BBC International for the above location is approved with the following conditions of approval:

**Special Stipulations:**

1. As stated previously in an email to the operator dated 11/02/11, an archeological survey must be completed prior to beginning cleanup operations on this location. No archeological survey has been conducted or submitted to the BLM as of this date of plan approval. (See plan implementation requirements listed below.)
2. This location and associated facilities had four spills in an 18 month period during which a total release of 1,743 barrels occurred. As requested in an email to the operator dated 11/02/11, OXY shall submit a spill prevention plan with specified actions, increased maintenance/testing measures, and/or equipment replacement that will be implemented to prevent future large spills from occurring in a critical cave/karst area from this well location, associated facility, and associated infrastructure. (See attached Written Order 13TG001, paper copy will be sent by certified mail to the operator). As per the written order, the abatement date for plan submission is 12/07/12. The plan should be submitted in conjunction with a Sundry Notice.

**Notification Stipulations:**

1. A copy of the cleanup plan and conditions of approval must be given to the contractor or site work personnel and be present on the location during all cleanup operations.
2. The authorized officer must be notified at the following phases of cleanup or conditions:
  - a. Prior to moving equipment on location for cleanup
  - b. When the excavation is nearing completion and a BLM inspection of the excavation or witnessing of sampling is required by the cleanup plan COA's.
  - c. When the cleanup work is nearing completion and to schedule a final onsite prior to removal of equipment.
  - d. Three days before the site is seeded.
  - e. Any time that a variance of the approved plan or conditions of approval is required.
  - f. In the event that you encounter excavation difficulties, unexpected void areas, or archeological artifacts the Authorized Officer must be contacted immediately. An onsite may be required to assess the situation.
3. The authorized officer on this undesirable event case is:

**Terry Gregston**  
**(575) 361-2635**  
**[tgregsto@blm.gov](mailto:tgregsto@blm.gov)**

**Plan Implementation:**

1. Archeological survey must be completed within 30 days of plan approval and submitted to the BLM for review, clearance, or archeological monitoring stipulations.

2. Cleanup operations will begin within **20** days of BLM archeological review.

**Archeology Stipulations:**

1. An archeological survey is required for this location prior to beginning any cleanup work.

**Depending on the results of the archeological survey:**

2. An archeological monitor may be required for this location during all work operations.

In the event that archeological artifacts are discovered during cleanup operations, contact the authorized officer on this case immediately. An onsite will be required to assess the situation.

**Pasture Impacted Areas:**

1. The BLM requires horizontal cleanup of the spill impacted areas in addition to vertical cleanup/mitigation measures.

2. The BLM may wish to inspect the excavation once it reaches cleanup depth/width. Confirmation samples of excavation bottoms, sidewalls and any visibly affected areas outside of the excavation trench will be required; the BLM may witness the sampling. Contact the authorized officer to schedule.

3. Lab analysis of the confirmation sampling must be forwarded to the authorized officer for final approval before backfilling. Based on the sampling results, additional cleanup may be required or the site may be approved for closure.

4. Once final approval of cleanup is given, the excavation can be backfilled with clean soil to the level of the original native contour plus enough loft to accommodate the settling and compaction of unconsolidated fill soils.

5. The top 6 inches of the backfill material must be topsoil similar to that in the surrounding native terrain.

6. If pastures are not contaminated but are impacted by cleanup operations, the impacts to the pasture areas will be mitigated by recontouring the impacted areas and restoring the surface as listed in items 7 through 9 of this section.

7. Install erosion control measures in the pasture-affected areas to prevent the unconsolidated reclamation materials from washing or blowing away until reclaimed areas settle and begin to revegetate.

8. Rip and seed reclaimed and equipment-impacted pasture areas with BLM seed mix #3 and #4, 50/50 mix.

9. Barricade entrance to reclaimed pasture areas with fencing or an earthen barrier sufficient to prevent vehicular access.

10. Continue to monitor spill reclamation area to ensure impacted pasture areas revegetate and that erosion issues do not develop.

**Other Stipulations:**

1. At the time of the final onsite for this location, the production facilities, well pad, access road, and the surrounding pasture areas must be in a condition that will pass a routine inspection.

2. All household trash, debris, disconnected pipe and equipment must be removed from the area and the surrounding pasture and hauled to an authorized landfill. Do not bury cleanup trash, equipment debris, or household garbage in the cleanup excavation.

---

**BLM approval of this proposal does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that may pose a threat to groundwater, surface water, human health, or the environment, or if the location fails to reclaim properly. In such an event that location does not revegetate, or future issues with contaminants are encountered, the operator will be asked to address the issues until contaminant issues are fully mitigated and the location is successfully reclaimed. In addition, BLM approval does not relieve the operator of responsibility for compliance with any other federal, state, or local laws/regulations.**

Thank you for your attention to these concerns,

**Terry Gregston**

## Prevention Plan

### US 13 Federal #2

- Oxy will get with its Mechanical Integrity group to do a survey on the lines in that area and come up with a recommended replacement plan.
- The flow line after the last leak was replaced with new.
- These lines will be visually checked daily.

**To:** Bratcher, Mike, EMNRD  
**Subject:** US 13 Fed #2

Mike, this site has been on the books for some time, I know that there was spill on top of spill. We had received an approved plan from you but could never get BLM to concur until lately. However after visiting this site the vegetation that was in question by the BLM being killed because of the spill has recovered and we have determined that the vegetation problems were due to the drought as vegetation going up the hill where no spill or fluids touched looked the same. With the new growth and the continued growth in that area I would hate to go in and tear all of that out and destroy the root system of the plants and brush. That being said I would like for us to put this area in a monitoring stage instead of going ahead with the original cleanup plan. We can go forward with that plan if you think that would be better but after looking at it I think we would be doing more harm than good. Let me know your thoughts as it pertains to this issue asap as we can move forward either way. Thanks.

**From:** Bratcher, Mike, EMNRD  
**Sent:** Tuesday, September 10, 2013 8:49 AM  
**To:** 'Christopher\_Jones@oxy.com'  
**Subject:** RE: Closure

Chris,

The biggest issue I see for this release, just looking at the analytical data, is one spot that had some fairly high hydrocarbon numbers. (TPH 19,700 @ surface - most of it was DRO and then went to 5500 @ 6"). It looks like this area was right around the cluster of flowlines as they come out (or go under) the road on I believe the north side. Do you know if any of that was removed? The proposal was to attempt removal to 1' in that area. Cliff and I discussed this release and I believe he had indicated that the 1' excavation may not be achievable in this area due to lines and in most areas out there, you hit rock fairly shallow. I would need something in the closure report to address that area, then if Jim is good with the re-veg, I would be ok with it.

I also have another open C-141 for this site - 2RP-726 was an 80 bbl release in Feb 2010. Elke environmental did the investigation on it and got low chloride and TPH numbers, and mentioned encountering rock within 1'-2'. We could close this one with a C-141 final requesting closure based on low numbers and shallow rock. I have a copy of the Elke report, it just hasn't been imaged yet.

There was also a large volume release (around 1600 bbls) out there in later 2010. The C-141 was submitted as initial and final, and accepted for record. It stated a water sample was taken and reported analysis for chloride was around 1600 - 1700 ppm. Not sure if this was a field test @ ppm or lab test, which should have been reported in mg/L. Either way, it seems the produced water is relatively low in chloride content. This C-141 stated the area would be monitored for re-veg. It is not open in our system, but if you wanted to mention in the closure for one of the other releases, that the area has re-veg, and refer to this release specifically, it would clear things up in the well file for this site if someone is looking at it down the road. There was never an RP number assigned to this release, but all of the C-141s are in the well file. 30-015-34272

Let me know if you need anything from me or want to discuss any of this. It would be a good thing to get all of these closed out.

Chris,

I did look at the multiple spills associated with the US 13 Federal #2 well. I am good for closing out the releases. The Chloride levels do not appear to be a big issue, can only see the locations improve. I did have some issues with the location. Plastic catchments with fluids and no netting. Some minor trash and scrap around the adjacent pasture .Need to address.

Thanks

Jim, I also went and looked at the US 13 Fed #2 site again, I had asked you a while back for closure here as well. The growth is even better now than it was the last time I looked. You had said that you were going to look at this site and get back with me. Please let me know what you think.

As discussed several months ago requesting closure at this site you expressed concern at the spill area around the pipes and heavy contaminated area. We resampled the area and we are clean. We would like permission to close these spills that are open for this location.

RE: US 13 FED #2

Enclosed are the results of analyses for samples received by the laboratory on 11/11/13 10:45.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-11-3. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (\*). For a complete list of accredited analytes and matrices visit the TCEQ website at [www.tceq.texas.gov/field/qa/lab\\_accred\\_certif.html](http://www.tceq.texas.gov/field/qa/lab_accred_certif.html).

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Coley D. Keene". The signature is written in a cursive, flowing style.

Celey D. Keene

Lab Director/Quality Manager
