NM OIL CONSERVATION
ARTESIA DISTRICT

JUN 06 2014

Describe Cause of Problem and Remedial Action Taken.*

A stainless steel 90 on the chemical injection line broke. Replaced the stainless steel 90.

RECEIVED

Describe Area Affected and Cleanup Action Taken.*

Initially an estimated 5 bbls of oil and 5 bbls of produced water were released from a stainless steel 90. We were able to recover 4 bbls oil and 2 bbls of produced water with a vacuum truck. The spill was located on the well pad. Remediation was completed in accordance with a remediation plan approved verbally by Mike Bratcher of NMOC and approved by Mike Burton of the BLM via email on 02/26/2014.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOC rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOC marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOC acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
