If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*
A lowboy (trailer) struck a steel linebacker that contained a 2 inch line that is coming from the Mean Green 27 Federal 1H. The movement of the linebacker when hit by the lowboy pulled the pipe threads out of a 2 inch steel fitting; allowing the spillage of produced water from the broken 2 inch line. The pipe fitting was repaired. The linebacker was repositioned and a 10 foot wide approach on each side of the linebacker was constructed from road building material.

Describe Area Affected and Cleanup Action Taken.*
Area was approximately 135 cubic ft. and because of the sand soil, all fluid soaked in.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
