If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*

A bleed valve at the circulating pump failed during the freeze, releasing produced fluids into the facility berm. The valve was replaced. All fluid was contained within the facility berm.

Describe Area Affected and Cleanup Action Taken.*

Area affected was located entirely inside the facility berm area. Oil was vacuumed and returned to the oil tank. Oil did not significantly soak into the soils due to the frozen/ice surface. All standing fluid was recovered. Photos and further clean-up will be submitted.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
