	to a depth of 2.5-feet bgs. Field chlorides titration testing was used to
guide the excavation. Once field results indicate that the impacted soil was below NMOCD Recommended Remedial Action Level's	
(RRAL's) confirmation soil samples were taken to insure all of the impacted material was removed. The impacted area in the vicinity of sample point S-2 was excavated to a depth of 2-feet deep. The impacted areas at sample point S-1 and S-5 were	
excavated to a depth of 0.5-feet deep. All of the excavated material was hauled to an NMOCD approved solid waste disposal	
facility, Lea Land, LLC. The excavated areas on location were backfilled with caliche and re-contoured to match the surrounding	
location. We ask that no further actions be required.	
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and	
regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability	
should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health	
or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other	
federal, state, or local laws and/or regulations.
