April 6, 2011

Mr. Mike Bratcher
Environmental Engineer Specialist
Oil Conservation Division, District 2
1301 West Grand Avenue
Artesia, New Mexico 88210

Re: Closure Report for the COG Operating LLC., Aoudad State #8, Unit A, Section 36, Township 17 South, Range 31 East, Eddy County, New Mexico.

Mr. Bratcher:

Tetra Tech, Inc. (Tetra Tech) was contacted by COG Operating LLC. (COG) to assess a spill from the Aoudad State #8 flow line, Unit A, Section 36, Township 17 South, Range 31 East, Eddy County, New Mexico (Site). The spill site coordinates are N 32.79222°, W 103.82318°. The site location is shown on Figures 1 and 2.

Background

According to the State of New Mexico C-141 Initial Report, the leak was discovered on January 29, 2010, and released approximately fifty five (55) barrels of produced water from a flow line that ruptured along a COG pipeline right-a-way. To alleviate the problem, COG personnel repaired the flow line and recovered fifty (50) barrels of standing fluids from the site. The spill initiated north of a two track right-of-away road impacting an area approximately 60' long by 10' wide and pooled in a native low-lying area. The initial and final C-141 forms are enclosed in Appendix A.

Groundwater

No water wells were listed within Section 36. According to the *Geology and Groundwater Resources of Eddy County, New Mexico* (Report 3), one well is located in Section 34, with a reported depth to water of 271' below surface. According to the NMOCD groundwater map, the average depth to groundwater in this area is greater than 350' below surface. The *Geology and Groundwater Resources of Eddy County, New Mexico* (Report 3) well report data is shown in Appendix B.

Regulatory

A risk-based evaluation was performed for the Site in accordance with the New Mexico Oil Conservation Division (NMOCD) Guidelines for Remediation of Leaks, Spills and Releases, dated August 13, 1993. The guidelines require a risk-based evaluation of the site to determine recommended remedial action levels (RRAL) for benzene, toluene, ethylbenzene and xylene (collectively referred to as BTEX) and total petroleum hydrocarbons (TPH) in soil. The proposed RRAL for benzene was determined to be 10 parts per million (ppm) or milligrams per kilogram (mg/kg) and 50 ppm for total BTEX (sum of benzene, toluene, ethylbenzene, and xylene). Based upon the depth to groundwater, the proposed RRAL for TPH is 5,000 mg/kg.

Soil Assessment and Analytical Results

On March 3, 2010, Tetra Tech personnel inspected and sampled the spill area. A total of three (3) auger holes (AH-1, AH-2 and AH-3) were installed using a stainless steel hand auger to assess the impacted soils. Select samples were analyzed for TPH analysis by EPA method 8015 modified, BTEX by EPA Method 8021B and chloride by EPA method 300.0. The sampling results are summarized in Table 1. The auger hole locations are shown on Figure 3. Copies of laboratory analysis and chain-of-custody documentation are included in Appendix B.

Referring to Table 1, the hydrocarbon impact showed a shallow impact to the soils. The auger holes (AH-1, AH-2, and AH-3) exceeded the RRAL for TPH and BTEX from surface down to 1-1.5', 0-1', and 1-1.5' below surface, respectively. The chloride concentrations were not defined in all the auger hole locations, with chloride concentrations of 6,320 mg/kg at AH-1 (9.0'), 6,020 mg/kg at AH-2 (9.0') and 29,900 mg/kg at AH-3 (5.0').

To delineate the chloride impact, on April 23, 2010, Tetra Tech supervised the installation of two boreholes (BH-1 and BH-2) utilizing an air rotary drilling rig. Soil samples were collected to a total depth of 40' below surface and the results are summarized in Table 1. Referring to Table 1, the chloride concentrations declined in SB-1 to 260 mg/kg and SB-2 to 716 mg/kg at 40' below surface. A spike in chloride concentrations for SB-1 at 20' appears to be cross contaminated from the upper zone.

Corrective Action

On June 4, 2010, Tetra Tech met with Mike Bratcher of the NMOCD to discuss the assessment results, proposed excavation depths and concerns regarding with a deep excavation plan. In order to remediate the site, COG proposed to excavate the impacted soils. Since the impacted area is in the native sand dunes, the proposed excavation depths may not be reached due to wall cave ins and safety concerns for onsite personnel. In addition, impacted soil around the buried lines may not be feasible or practicable to be removed due to safely concerns. As approved in that meeting, if the depths could not be reached, a 40 mil liner would be installed at depth of 4' to 5' below surface to cap the impacted area.

On November 8, through November 10, 2010, Tetra Tech personnel supervised the removal of impacted soils. Due to the loose sand caving, the proposed depths could not be reached. As a result, the entire excavation was excavated to depth of 10'.0' below surface and lined with a 40 mil liner at approximately 4.0' below ground surface. The excavation was backfilled with clean soil and approximately 600 yds^3 of soil was hauled to Controlled Recovery, Inc. for disposal. The excavation depth and liner installation area are shown on Figure 4.

Closure Request

Based upon the remediation performed at this site, COG Operating LLC respectfully requests closure of this site. A form C-141 final is included in Appendix A. If you have any question or comments concerning the activities performed at the Site, please call me at (432) 682-4559.

Respectfully submitted,
TETRA TECH

Ike Tavarez
Senior Project Manager

A flowline ruptured and leaked, releasing produced fluids into the pasture. The ruptured flowline was immediately repaired.

Describe Area Affected and Cleanup Action Taken.*
50 barrels of fluid was picked up with a vacuum truck. Saturated soil was removed. Tetra Tech inspected site and collected samples to define spills extent. Soil that exceeded RRAL was removed and hauled away for proper disposal. Site was then brought up to surface grade with clean backfill material. Tetra Tech prepared closure report and submitted to NMOCD for review.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

17.28.2.240	27.6	Dec. 1, 1948	3	W	S	Depth to water measured while pumping.
14.220	80	–	61	W	S & D	Driller: Cy Hinshaw. See analysis, Table 3.
19.200	224.3	Dec. 2, 1948	1.2	W	S	Depth to water measured while pumping.
22.230	45.5	Dec. 1, 1948	–	N	N	Abandoned stock well.
17.29.22.110	79.7	Nov. 29, 1948	3 E.	W	S	Depth to water measured while pumping.
29.400	210	Dec. 3, 1948	1.1	W	S	do.
17.31.34.000	271+	Dec. 6, 1948	3.5	W	S	do. See analysis, Table 3.
18.21.13.310	505	–	10 R.	W	S & D	Formerly C.C.C. well. Cased to 30 ft.
27.440	530	–	–	W	S	Cased to 120 ft.
32.430	800 (?)	–	12 R.	W	S & D	Lowered cylinder 5 ft. in 1948 because water level declined. Cased to 380 ft.
18.23.6.140	440	Jan. 12, 1950	–	W	S & D	
18.25.23.111	117.8	Jan. 1950	–	W	S	

See explanation at beginning of table.
1 Measured Dec. 3, 1948.

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

Michael Abel

Dr. Blair Leftwich, Director
Dr. Michael Abel, Project Manager

Standard Flags

B - The sample contains less than ten times the concentration found in the method blank.

Case Narrative

Samples for project COG/Aoudad State #8 were received by TraceAnalysis, Inc. on 2010-03-09 and assigned to work order 10031010. Samples for work order 10031010 were received intact at a temperature of 7.6 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep Batch	Prep Date	QC Batch	Analysis Date
BTEX	S 8021B	58349	2010-03-11 at 15:00	68187	2010-03-11 at 14:27

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 10031010 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

Analytical and Quality Control Report

Ike Tavarez
Tetra Tech
1910 N. Big Spring Street
Midland, TX, 79705

Report Date: May 4, 2010

Work Order: 10042612

Project Location: Eddy County, NM
Project Name: COG/Aoudad State #8
Project Number: 114-6400434

Enclosed are the Analytical Report and Quality Control Report for the following sample(s) submitted to TraceAnalysis, Inc.

Sample	Description	Matrix	Date Taken	Time Taken	Date Received
229537	SB-1 5' (1' BEB)	soil	2010-04-23	00:00	2010-04-23

229551	SB-2 30' (1' BEB)	soil	2010-04-23	00:00	2010-04-23
229552	SB-2 40' (1' BEB)	soil	2010-04-23	00:00	2010-04-23

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

Dr. Blair Leftwich, Director
Dr. Michael Abel, Project Manager

Standard Flags

B - The sample contains less than ten times the concentration found in the method blank.

Case Narrative

Samples for project COG/Aoudad State #8 were received by TraceAnalysis, Inc. on 2010-04-23 and assigned to work order 10042612. Samples for work order 10042612 were received intact at a temperature of 24.0 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep Batch	Prep Date	QC Batch	Analysis Date
Chloride (Titration)	SM 4500-Cl B	59456	2010-04-28 at 08:51	69515	2010-04-29 at 12:17
Chloride (Titration)	SM 4500-Cl B	59457	2010-04-28 at 08:51	69630	2010-05-03 at 15:07

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 10042612 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.
