a Watercourse was Impacted, Describe Fully.\*

**NM OIL CONSERVATION**  
ARTESIA DISTRICT

Describe Cause of Problem and Remedial Action Taken.\* JUN 06 2014

A 4" valve separated at thread seam on the production tank. Replaced the 4" valve.

**RECEIVED**

Describe Area Affected and Cleanup Action Taken.\*

Initially 20 bbls of oil were released due to a 4" valve that failed on the production inside the tank battery. We were able to recover 15 bbls of oil with a vacuum truck. The spill was contained inside the tank battery. All free fluid has been recovered. BBC International completed remediation in accordance with the remediation plan approved by Mike Bratcher of NMOCD on April 1, 2014.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
