We are going to need a delineation, that was a lot of lost produced water. Is there any way of achieving a delineation without damaging the liner? This is also an area of very shallow groundwater.

Yes.

Being that this is an active facility, how would you like us to handle this? The liner has been repaired. Do we need to delineate?

Should this be just an initial C-141 then?

All,

I need to make a correction to this C-141.

Apparently after gauging the tank and looking at water haul tickets, it was realized that the total volume of water released was 160 bbls. We did only recover 20 bbls and this is a lined facility. When the dirt covering was removed from the liner two (2) rips were discovered. That would make total volume lost 140 bbls of produced water.

This is an active production facility. Please advise as to how you'd like us to move forward.

Mike,

Please find attached the C-141 for the Jumping Spring 16 State 1.

Please call me if you have any questions.

Thank you,

Gloria Garza
