BP America Production Company respectfully requests permission to Surface Commingle the two subject wells, Florance 119S (Basin Fruitland Coal) and Florance 25A (Blanco-Mesaverde).

Surface commingling production from the existing Florance 119S (FC) and Florance 25A (MV) will not reduce the economic life of the wells.

After separation, the production from each of the two wells is metered individually prior to commingling. The commingled gas will then be sent through compression prior to entering the sales meter. The difference between what is measured prior to commingling and what is sold through the sales meter is the fuel usage. The fuel usage is allocated back to each well based on the well production (see attached schematic).

The working interest, royalty and overriding royalty interest owners in the subject wells are not identical therefore notification is required and was sent by certified mail to Conoco Phillips/Burlington Resources. Please see the attached Land Letter. The proposed commingling of production is to reduce operating expenses between the 2 wells and will result in increased economic life of the wells.
