NATURE OF RELEASE

Type of Release	Natural Gas, Crude Oil and Produced Water	Volume of Release	51 BBLS	Volume Recovered	46 BBLS
Source of Release	20-Inch Steel Pipeline (Low Pressure)	Date and Hour of Occurrence	June 23, 2011 - Unknown	Date and Hour of Discovery	June 23, 2011 - 1615 hrs
Was Immediate Notice Given?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Required	If YES, To Whom?	Geoffrey Leking - NMOCD Hobbs District Office		
By Whom?	Curt D. Stanley	Date and Hour	June 24, 2011 - 0711 hours (MDT)		
Was a Watercourse Reached?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If YES, Volume Impacting the Watercourse.			

If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*

Failure of a segment of the twenty (20) inch low-pressure steel pipeline resulted in the release of approximately fifty-one (51) barrels of a mixture of crude oil and produced water. The cause of the failure was attributed to internal corrosion. An unknown volume of natural gas was released to the atmosphere. Following discovery of the release, a temporary pipeline clamp was employed to mitigate the release. A vacuum truck was able to recover approximately forty-six (46) barrels of the released mixture.

Describe Area Affected and Cleanup Action Taken.*

An irregular shaped area of along the pipeline ROW measuring approximately 300 feet in length and two (2) to eight (8) feet in width was affected by the release. A contractor was employed to scrape the hydrocarbon saturated soil from the affected area and transport the impacted soil to Sundance, Inc. Delineation and remediation activities will follow NMOCD guidelines.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

1.0 INTRODUCTION & BACKGROUND INFORMATION

Basin Environmental Service Technologies, LLC (Basin), on behalf of Southern Union Gas Services (Southern Union), has prepared this *Remediation Summary & Site Closure Request* for the release site known as Trunk "M" #646 (6/23/11), henceforth referred to as Trunk "M" 6-23-11. The legal description of the release site is Unit Letter "P" (SE/SE), Section 24, Township 22 South, Range 36 East, in Lea County, New Mexico. The geographic coordinates of the release site are 32° 22.409' North latitude and 103° 12.654' West longitude. The property affected by the release is owned by the State of New Mexico and administered by the New Mexico State Land Office (NMSLO). The NMSLO Right of Entry permit number is ROE-2061 (Remediation). A "Site Location Map" is provided as Figure 1.

On June 23, 2011, Southern Union discovered a release had occurred on the Trunk "M" pipeline. The release was reported to the New Mexico Oil Conservation Division (NMOCD) Hobbs District Office on June 24, 2011. The "Release Notification and Corrective Action" (Form C-141) indicated failure of a segment of the twenty inch (20") low-pressure Trunk "M" steel pipeline resulted in the release of approximately fifty-one barrels (51 bbls) of a mixture of crude oil and produced water. An unknown volume of natural gas was also released to the atmosphere. The cause of the failure was attributed to internal corrosion. Following discovery of the release, a temporary pipeline clamp was employed to mitigate the release. A vacuum truck was utilized to recover approximately forty-six barrels (46 bbls) of the released mixture. Hydrocarbon saturated soil was excavated from the affected area and transported to Sundance Services, Inc. (NMOCD Permit # NM-01003), for disposal.

The release affected an irregularly shaped area of land along the Southern Union right-of-way measuring approximately three hundred feet (300') in length and two feet (2') to eight feet (8') in width.

The Form C-141 is provided as Appendix D. General photographs of the release site are provided as Appendix A.

2.0 NMOCD SITE CLASSIFICATION

A search of the New Mexico Water Rights Reporting System (NMWRRS) database maintained by the New Mexico Office of the State Engineer (NMOSE) indicated information was unavailable for Section 24, Township 22 South, Range 36 East. A depth-to-groundwater reference map utilized by the NMOCD indicates groundwater should be encountered at approximately one hundred and fifteen feet (115') below ground surface (bgs). Based on the NMOCD ranking system, zero (0) points will be assigned to the site as a result of this criterion.

A search of the NMWRRS database indicated there are no water wells within 1,000 feet of the release. Based on the NMOCD ranking system, zero (0) points will be assigned to the site as a result of this criterion.

There are no surface water bodies within 1,000 feet of the release. Based on the NMOCD ranking system, zero (0) points will be assigned to the site as a result of this criterion.

NMOCD guidelines indicate the Trunk "M" 6-23-11 release site has an initial ranking score of zero (0) points. The soil remediation levels for a site with a ranking score of zero (0) points are as follows:

- Benzene – 10 mg/Kg (ppm)
- BTEX – 50 mg/Kg (ppm)
- TPH – 5,000 mg/Kg (ppm)

The New Mexico Administrative Code (NMAC) does not currently specify a remediation level for chloride concentrations in soil. Chloride remediation levels are set by the NMOCD on a site-specific basis.

3.0 SUMMARY OF SOIL REMEDIATION ACTIVITIES

On June 29, 2011, following initial response activities, excavation of impacted soil commenced at the site. Hach Quantab Chloride Low Range (30-600 mg/Kg) Titrators were used to field-screen the horizontal and vertical extent of impacted soil and to guide the excavation. As a safety and environmental precaution, Southern Union requested and received NMOCD approval to leave in-place soil beneath the pipeline, to support the pipeline during remediation activities.

From June 29 through July 6, 2011, approximately six hundred and eighty-four (684) cubic yards (cy) of impacted soil was excavated and transported to Sundance Services, Inc., for disposal. Soil disposal manifests are provided as Appendix C.

On July 6, 2011, twenty-eight (28) soil samples (Samples #1 through #28) were collected from the floor and sidewalls of the excavation. Samples were collected at fifty foot (50') horizontal intervals, beginning with Sample #1 in the southeast wall of the excavation and ending with Sample #28 in the northeast wall. The soil samples were submitted to Xenco Laboratories, Inc., in Odessa, Texas, for analysis of benzene, ethylbenzene, toluene, and xylene (BTEX), total petroleum hydrocarbons (TPH), and/or chloride concentrations using EPA Methods SW 846-8021b, SW 846-8015M, and 300.1, respectively. Table 1 summarizes the "Concentrations of Benzene, BTEX, TPH & Chlorides in Soil". Soil sample locations are depicted in Figure 2, "Site & Sample Location Map". Laboratory analytical reports are provided as Appendix B.

Laboratory analytical results indicated BTEX and TPH concentrations were less than the appropriate laboratory method detection limit (MDL) in all soil samples submitted. Chloride concentrations ranged from 14.0 mg/Kg in soil sample Sample #26 to 878 mg/Kg in soil sample Sample #9. Review of laboratory analytical results indicated TPH, Benzene, BTEX, and chloride concentrations were less than NMOCD regulatory standards for all submitted soil samples.

On August 1, 2011, based on laboratory analytical results, Southern Union requested and received NMOCD approval to backfill the excavation with locally purchased non-impacted soil.

From August 2 through August 5, 2011, the excavation was backfilled in eighteen-inch (18") lifts, compacted, and contoured to fit the surrounding topography. Prior to backfilling, final dimensions of the excavation were approximately three hundred and twenty-one feet (321') in

length, approximately twelve feet (12') to twenty-four feet (24') in width, and ranging in depth from approximately three feet (3') to twelve feet (12') bgs.

The release site will be seeded with an NMSLO-approved seed mixture during the 2012 and 2013 calendar years.

4.0 QA/QC PROCEDURES

4.1 Soil Sampling

Soil Samples were delivered to Xenco Laboratories, Inc., in Odessa, Texas, for analysis of BTEX, TPH, and/or chloride concentrations using the methods described below. Soil samples were analyzed for BTEX, TPH, and/or chloride concentrations within fourteen (14) days following the collection date.

The soil samples were analyzed as follows:

- BTEX concentrations in accordance with EPA Method SW 846-8021b
- TPH concentrations in accordance with modified EPA Method SW 846-8015M
- Chloride concentrations in accordance with EPA Method 300.1

4.2 Decontamination of Equipment

Cleaning of the sampling equipment was the responsibility of the environmental technician. Prior to use, and between each sample, the sampling equipment was cleaned with Liqui-Nox® detergent and rinsed with distilled water.

4.3 Laboratory Protocol

The laboratory was responsible for proper QA/QC procedures after signing the chain-of-custody form(s). These procedures were either transmitted with the laboratory analytical reports or are on file at the laboratory.

5.0 SITE CLOSURE REQUEST

Soil samples collected from the floor and sidewalls of the Trunk "M" 6-23-11 excavation were analyzed by an NMOCD-approved laboratory, and concentrations of Benzene, BTEX, TPH, and chlorides were less than the remediation action levels established for the site. Based on these laboratory analytical results, Basin recommends Southern Union provide the NMOCD Hobbs District Office and the NMSLO a copy of this *Remediation Summary & Site Closure Request* and request the NMOCD grant site closure to the Trunk "M" 6-23-11 release site.

6.0 LIMITATIONS

Basin Environmental Service Technologies, LLC, has prepared this *Remediation Summary & Site Closure Request* to the best of its ability. No other warranty, expressed or implied, is made or intended. Basin has examined and relied upon documents referenced in the report and on oral statements made by certain individuals. Basin has not conducted an independent examination of the facts contained in referenced materials and statements. Basin has presumed the genuineness of these documents and statements and that the information provided therein is true and accurate. Basin has prepared this report in a professional manner, using the degree of skill and care exercised by similar environmental consultants. Basin notes that the facts and conditions referenced in this report may change over time, and the conclusions and recommendations set forth herein are applicable only to the facts and conditions as described at the time of this report.

This report has been prepared for the benefit of Southern Union Gas Services. The information contained in this report, including all exhibits and attachments, may not be used by any other party without the express consent of Basin Environmental Service Technologies, LLC, and/or Southern Union Gas Services.

Reference: XENCO Report No: **422250**
Trunk M 6-23-11
Project Address: Eunice, NM

Rose Slade:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number 422250. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. Estimation of data uncertainty for this report is found in the quality control section of this report unless otherwise noted. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 422250 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Brent Barron, II

Odessa Laboratory Manager

CASE NARRATIVE

Client Name: Southern Union Gas Services- Monahans

Project Name: Trunk M 6-23-11

Project ID:

Work Order Number: 422250

Report Date: 13-JUL-11

Date Received: 07/07/2011

Sample receipt non conformances and comments:

None

Sample receipt non conformances and comments per sample:

None

Analytical non nonformances and comments:

Batch: LBA-863238 TPH By SW8015 Mod
SW8015MOD_NM

Batch 863238, o-Terphenyl recovered above QC limits . Matrix interferences is suspected; data not confirmed by re-analysis
Samples affected are: 422250-009.

SW8015MOD_NM

Batch 863238, C6-C12 Gasoline Range Hydrocarbons recovered below QC limits in the Matrix Spike. C12-C28 Diesel Range Hydrocarbons recovered below QC limits in the Matrix Spike and Matrix Spike Duplicate.

Samples affected are: 422250-026, -010, -015, -025, -012, -013, -014, -016, -023, -024, -011, -017, -028, -009, -018, -027.

The Laboratory Control Sample for C12-C28 Diesel Range Hydrocarbons, C6-C12 Gasoline Range Hydrocarbons is within laboratory Control Limits

Batch: LBA-863362 Anions by E300

RPD recovered outside QC Limits for Chloride between the sample and sample duplicate.

Samples affected are: 422250-011, -013, -012, -014, -015, -016, -017, -018, -019, 0-20, -022, -021, -022, -023, 0-24, -025, -026, -027, -028

Batch: LBA-863561 TPH By SW8015 Mod
SW8015MOD_NM

Batch 863561, o-Terphenyl recovered above QC limits . Matrix interferences is suspected; data not confirmed by re-analysis

Samples affected are: 422572-008 S, 422250-006, 422250-003, 422250-004.

Flagging Criteria

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the quantitation limit and above the detection limit.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.
- JN** A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

BRL Below Reporting Limit.

RL Reporting Limit

MDL Method Detection Limit **SDL** Sample Detection Limit **LOD** Limit of Detection

PQL Practical Quantitation Limit **SQL** Method Quantitation Limit **LOQ** Limit of Quantitation

DL Method Detection Limit

NC Non-Calculable
