Subject: Re: Cottonwood

Bob,

I personally don't think the trenches will cover the area of the largest impacts. I think we need the boreholes to fully delineate the impact. Thanks

Jim and Mike.... Regarding the Cottonwood, in the report that I left you when we last met, we had previously found the vertical extent of contamination at all thirteen "hot spots" determined by surface sampling previously. Please take a look at the report (attached) and see if the test trenches around the well head will suffice in lieu of installing boreholes. Thank you
