Release Notification and Corrective Action

OPERATOR

☒ Initial Report ☐ Final Report

Name of Company	Southern Union Gas Services	Contact	Curt Stanley
Address	801 S. Loop 464, Monahans, TX 79756	Telephone No.	575-390-7595
Facility Name	Trunk M (South of King Road)	Facility Type	Natural Gas Pipeline
Surface Owner	Millard Deck Estate	Lease No.	30-025-38822

LOCATION OF RELEASE

Unit Letter P	Section 25	Township 22S	Range 36E	Feet from the	North/South Line	Feet from the	East/West Line	County Lea
------------------	---------------	-----------------	--------------	---------------	------------------	---------------	----------------	---------------

Latitude 32 degrees 21.4355' North Longitude 103 degrees 12.6091' West

NATURE OF RELEASE

Type of Release	Natural Gas, Crude Oil and Produced Water	Volume of Release	> 5 bbls	Volume Recovered	None
Source of Release	20 inch Natural Gas Pipeline	Date and Hour of Occurrence	Unknown	Date and Hour of Discovery	August 8, 2012 - 1500 hours
Was Immediate Notice Given?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Not Required	If YES, To Whom?			
By Whom?		Date and Hour			
Was a Watercourse Reached?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If YES, Volume Impacting the Watercourse.			

If a Watercourse was Impacted, Describe Fully.\*

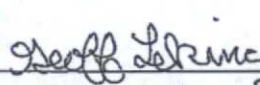

Describe Cause of Problem and Remedial Action Taken.\*

This release was initially deemed "non-reportable" to the NMOCD. Preliminary excavation of the release indicates the release is reportable to the NMOCD. The affected steel pipeline was fitted with a temporary pipeline clamp to mitigate the release; subsequently the steel pipeline segment was replaced with 20 inch polyline.

Describe Area Affected and Cleanup Action Taken.\*

The release is largely contained within the confines of the SUGS right-of-way. The release will be remediated to NMOCD regulatory standards.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

## **1.0 INTRODUCTION**

Nova Safety & Environmental (NOVA), on behalf of Southern Union Gas Services (SUGS), has prepared this Remediation Summary and Site Closure Request for the release site known as Trunk "M" (South of King Road). The legal description of the release site is Unit Letter "P" (SE ¼), Section 25, Township 22 South, Range 36 East, in Lea County, New Mexico. The property affected by the release is owned by the Millard Deck Estate. The release site GPS coordinates are 32° 21.4355' North and 103° 12.6091' West. Please reference Figure 1 for a Site Location Map and Figure 2 for a Site Map. The New Mexico Oil Conservation Division (NMOCD) Release Notification and Corrective Action (Form C-141) is provided as Appendix D.

In August 2012, evidence of a historical release was brought to the attention of SUGS by an agent of the landowner. This release was initially deemed to be "non-reportable" under NMOCD regulatory guidelines. Preliminary excavation of the release site indicated the release was of a greater magnitude and was designated "reportable" by SUGS personnel. In accordance with NMOCD regulatory guidelines, a Release Notification and Corrective Action (Form C-141) was submitted to the NMOCD Hobbs District Office on August 15, 2012. The affected SUGS twenty (20) inch steel pipeline was fitted with a temporary pipeline clamp to mitigate the release; subsequently, the affected steel pipeline segment was replaced with twenty (20) inch polyline. The release occurred adjacent to a SUGS high pressure 16" steel pipeline running parallel to the SUGS 20 inch steel pipeline. Due to safety issues associated with excavating beneath and supporting the 16 inch diameter high pressure pipeline, SUGS requested and received NMOCD approval to leave the soil adjacent to and beneath the 16 inch pipeline in-situ. General photographs of the site are provided as Appendix B.

## **2.0 NMOCD SITE CLASSIFICATION**

According to data obtained from The New Mexico Office of the State Engineer (NMOSE), no water wells are registered in Section 25, Township 22 South, Range 36 East. A depth to groundwater reference map utilized by the NMOCD indicates groundwater should be encountered at approximately one hundred eighteen (118) feet below ground surface (bgs). The inferred depth to groundwater at the Trunk M (South of King Road) Release Site results in a score of zero (0) points being assigned to the site based on the NMOCD depth to groundwater criteria.

The water well database, maintained by the NMOSE, indicates there are no water wells located less than 1,000 feet from the release point, resulting in zero (0) points being assigned to the site as a result of this criteria.

There are no surface water bodies located within 1,000 feet of the site. Based on the NMOCD ranking system zero (0) points will be assigned to the site as a result of the criteria.

The NMOCD guidelines indicate the Trunk "M" (South of King Road) Release Site has ranking score of zero (0). Based on this score, the soil remediation levels for a site with a ranking score of zero (0) points are as follows:

- Benzene – 10 mg/Kg (ppm)
- BTEX – 50 mg/Kg (ppm)
- TPH – 5,000 mg/Kg (ppm)

The NMOCD chloride cleanup level concentrations are site specific and are determined by the NMOCD Hobbs District Office.

The landowner's agent requested impact soil excavated from the release be transported off site. SUGS honored the agent's request and remediated the release to a more stringent standard than required by the NMOCD.

### 3.0 SUMMARY OF SOIL REMEDIATION ACTIVITIES

On August 07, 2012, NOVA, at the request of SUGS, commenced remediation activities at the Trunk "M" (South of King Road) Release Site. Approximately 1,848 cubic yards (yds<sup>3</sup>) of impacted soil was excavated and stockpiled on-site, pending final disposition. The excavated soil was placed on a plastic liner to minimize leaching of contaminants into the underlying soil. The resulting excavation measured approximately one hundred fifty (150) feet in length, and ranged from approximately fifty-three (53) feet to sixty-nine (69) feet in width and ranged in depth from approximately five (5) feet to eleven (11) feet bgs. The soil beneath and adjacent to the SUGS sixteen inch (16) inch high pressure pipeline was left in-situ, due to safety concerns associated with excavating in the vicinity of and support of the high pressure pipeline. Please reference Figure 2 for site details. The affected steel pipeline was temporarily clamped to mitigate the release; subsequently, the affected steel pipeline segment was replaced with a segment of twenty (20) inch polyline.

On August 17, 2012, ten (10) soil samples (RP Floor @ 11', North S/W-1 @ 5.5', South S/W-1 @ 5.5', West S/W-1 @ 5.5', East S/W-1 @ 5.5', Floor-1 @ 5', East S/W-2 @ 2.5', South S/W-2 @ 2.5', North S/W-2 @ 2.5', and West S/W-2 @ 2.5') were collected from the sidewalls and floor of the excavation. The soil samples were submitted to the laboratory for determination of concentrations of benzene, toluene, ethyl-benzene and xylene (BTEX), total petroleum hydrocarbon (TPH), and chlorides using EPA SW-846 8021b, SW-846 8015M, and E 300, respectively. Laboratory analytical results indicated benzene concentrations were less than the appropriate laboratory MDL of 0.00100 mg/Kg for all the submitted soil samples. Laboratory analytical results indicated BTEX concentrations were less than the laboratory MDL of 0.00100 mg/Kg for all the submitted soil samples, with the exception of soil sample Floor-1 @ 5', which exhibited a BTEX concentration of 0.01296 mg/Kg. Laboratory analytical results indicated TPH concentrations were less than the appropriate laboratory MDL for all the submitted soil samples, with the exception of soil samples South S/W-1 @ 5.5', East S/W-1 @ 5.5', and Floor-1 @ 5', which exhibited TPH concentrations ranging from 26.6 to 1,510 mg/Kg. Chloride concentrations ranged from 3.10 mg/Kg for soil sample East S/W-2 @ 2.5' to 10,500 mg/Kg for soil sample South S/W-1 @ 5.5'. A review of the laboratory analytical results indicated benzene, BTEX, TPH and chloride concentrations were less than NMOCD regulatory guidelines for all submitted soil samples with the exception of soil samples South S/W-1 @ 5.5' and West S/W-1 @ 5.5', which exceeded regulatory guidelines for chloride concentrations and soil sample Floor-1 @ 5', which exceeded regulatory guidelines for TPH concentrations. Based on the laboratory analytical results, additional excavation was required in the areas represented by soil samples South S/W-1

@ 5.5', West S/W-1 @ 5.5', and Floor-1 @ 5'. Table 1 summarizes the Concentrations of Benzene, BTEX, TPH and Chlorides in Soil. Laboratory analytical reports are provided as Appendix A.

The soil proximal to the SUGS sixteen (16) inch high pressure pipeline, which is adjacent to the location of soil sample West S/W-1 @ 5.5', was left in-situ due to safety concerns associated with excavating and supporting the high pressure pipeline. Consequently, an area approximately five feet to the west of the pipe line was trenched and a sample (Trench-1 @ 11') was collected from the floor of the trench and submitted to the laboratory to determine concentrations of benzene, BTEX, TPH, and chlorides. Laboratory analytical results indicated benzene, BTEX, TPH, and chlorides were less than the laboratory MDL and less than NMOCD regulatory guidelines for the submitted soil sample.

In addition, two (2) composite soil samples (SP-1 and SP-2) were collected from the stockpiled soil. The soil samples were submitted to the laboratory for determination of concentrations of TPH using method SW-846 8015M. Laboratory analytical results indicated TPH concentrations ranging from 3,980 mg/Kg for sample SP-2 to 6,060 mg/Kg for sample SP-1. Based on laboratory analytical results, it was determined the stockpiled soil would be transported to Sundance Services for disposal.

Based on the results of the August 17, 2012 sampling event, additional excavation was completed in the areas represented by soil samples South S/W-1 @ 5.5' and Floor -1 @ 5'.

On August 28, 2012, two (2) soil samples (Floor-2 @ 11' and South S/W-1A @ 5.5') were collected from the south sidewall and floor of the excavation. The soil samples were submitted to the laboratory for benzene, BTEX, TPH, and chloride analysis. Laboratory analytical results indicated benzene, BTEX, and TPH concentrations were less than the appropriate laboratory MDL for all the submitted soil samples. Chloride concentrations ranged from 4.11 mg/Kg for soil sample South S/W-1A @ 5.5' to 53.4 mg/Kg for soil sample Floor-2 @ 11'. A review of the laboratory analytical results indicated benzene, BTEX, TPH and chloride concentrations were less than NMOCD regulatory guidelines for all submitted soil samples.

On August 29, 2012, three (3) soil samples (Floor-1 @ 7', East S/W-3 @ 5.5', and West S/W-3 @ 5.5') were collected from the floor and sidewalls of the excavation. The soil samples were submitted to the laboratory for BTEX, TPH, and chloride analysis. Laboratory analytical results indicated benzene, BTEX, and TPH concentrations were less than the appropriate laboratory MDL for soil samples East S/W-3 @ 5.5' and West S/W-3 @ 5.5'. Chloride concentrations ranged from 9.75 mg/Kg for soil sample East S/W-3 @ 5.5' to 2,180 mg/Kg for soil sample West S/W-3 @ 5.5'. A review of the laboratory analytical results indicated benzene, BTEX, TPH and chloride concentrations were less than NMOCD regulatory guidelines for all submitted soil samples with the exception of soil sample West S/W-3 @ 5.5'.

The soil proximal to the SUGS sixteen (16) inch high pressure pipeline, which lies adjacent to the location of soil sample West S/W-3 @ 5.5', was left in-situ due to safety concerns associated with excavating and supporting the large diameter pipeline. Consequently, an area to the west of the pipeline was trenched and sample Trench-2 @ 5.5' was collected and submitted to the laboratory for analysis. Laboratory analytical results for soil sample Trench-2 @ 5.5' did not

exceed NMOCD regulatory guidelines, indicating no further excavation was warranted in the area of Trench-2 @ 5.5' soil sample.

On September 20, 2012, SUGS and NOVA representatives met with an NMOCD Hobbs District Office representative to present the results of the soil sampling events, and request permission to backfill the excavation. The NMOCD representative verbally granted SUGS approval for the disposal of the impacted soil at Sundance Services in Eunice, New Mexico as well as the backfill of the excavation with non-impacted soil.

A total of approximately 1,848 cubic yards of impacted soil was transported to Sundance Services, Inc. (NMOCD Permit # 01-0003) for disposal. The excavation was backfilled with locally obtained non-impacted soil and water compacted. On completion of backfilling activities the disturbed area was contoured to fit the surrounding topography. Manifests documenting soil disposal are provided as Appendix C.

#### **4.0 QA/QC PROCEDURES**

##### **4.1 Soil Sampling**

Soil samples were delivered to Permian Basin Environmental Lab, LP., of Midland, Texas for BTEX and/or TPH and/or chloride analyses using the methods described below. Soil samples were analyzed for BTEX and/or TPH and/or chloride concentrations within fourteen (14) days following the sampling event.

The soil samples were analyzed as follows:

- BTEX concentrations in accordance with EPA Method 8021B, 5030
- TPH concentrations in accordance with modified EPA Method 8015M GRO/DRO
- Chloride concentration in accordance with Method E 300.

##### **4.2 Decontamination of Equipment**

Cleaning of the sampling equipment was the responsibility of the environmental technician. Prior to use and between each sample, the sampling equipment was cleaned with Liqui-Nox® detergent and rinsed with distilled water.

##### **4.3 Laboratory Protocol**

The laboratory was responsible for proper QA/QC procedures after signing the chain-of-custody (COC) form. These procedures were either transmitted with the laboratory reports or are on file at the laboratory.

#### **5.0 SITE CLOSURE REQUEST**

Based on the analytical results of confirmation soil samples, NOVA recommends SUGS provide the NMOCD a copy of this Remediation Summary and Site Closure Request and request the NMOCD grant closure to the Trunk "M" (South of King Road) Release Site.

## **6.0 LIMITATIONS**

NOVA Safety and Environmental has prepared this Remediation Summary and Site Closure Request to the best of its ability. No other warranty, expressed or implied, is made or intended.

NOVA Safety and Environmental has examined and relied upon documents referenced in the report and has relied on oral statements made by certain individuals. NOVA Safety and Environmental has not conducted an independent examination of the facts contained in referenced materials and statements. We have presumed the genuineness of the documents and that the information provided in documents or statements is true and accurate. NOVA Safety and Environmental has prepared this report, in a professional manner, using the degree of skill and care exercised by similar environmental consultants. NOVA Safety and Environmental also notes that the facts and conditions referenced in this report may change over time and the conclusions and recommendations set forth herein are applicable only to the facts and conditions as described at the time of this report.

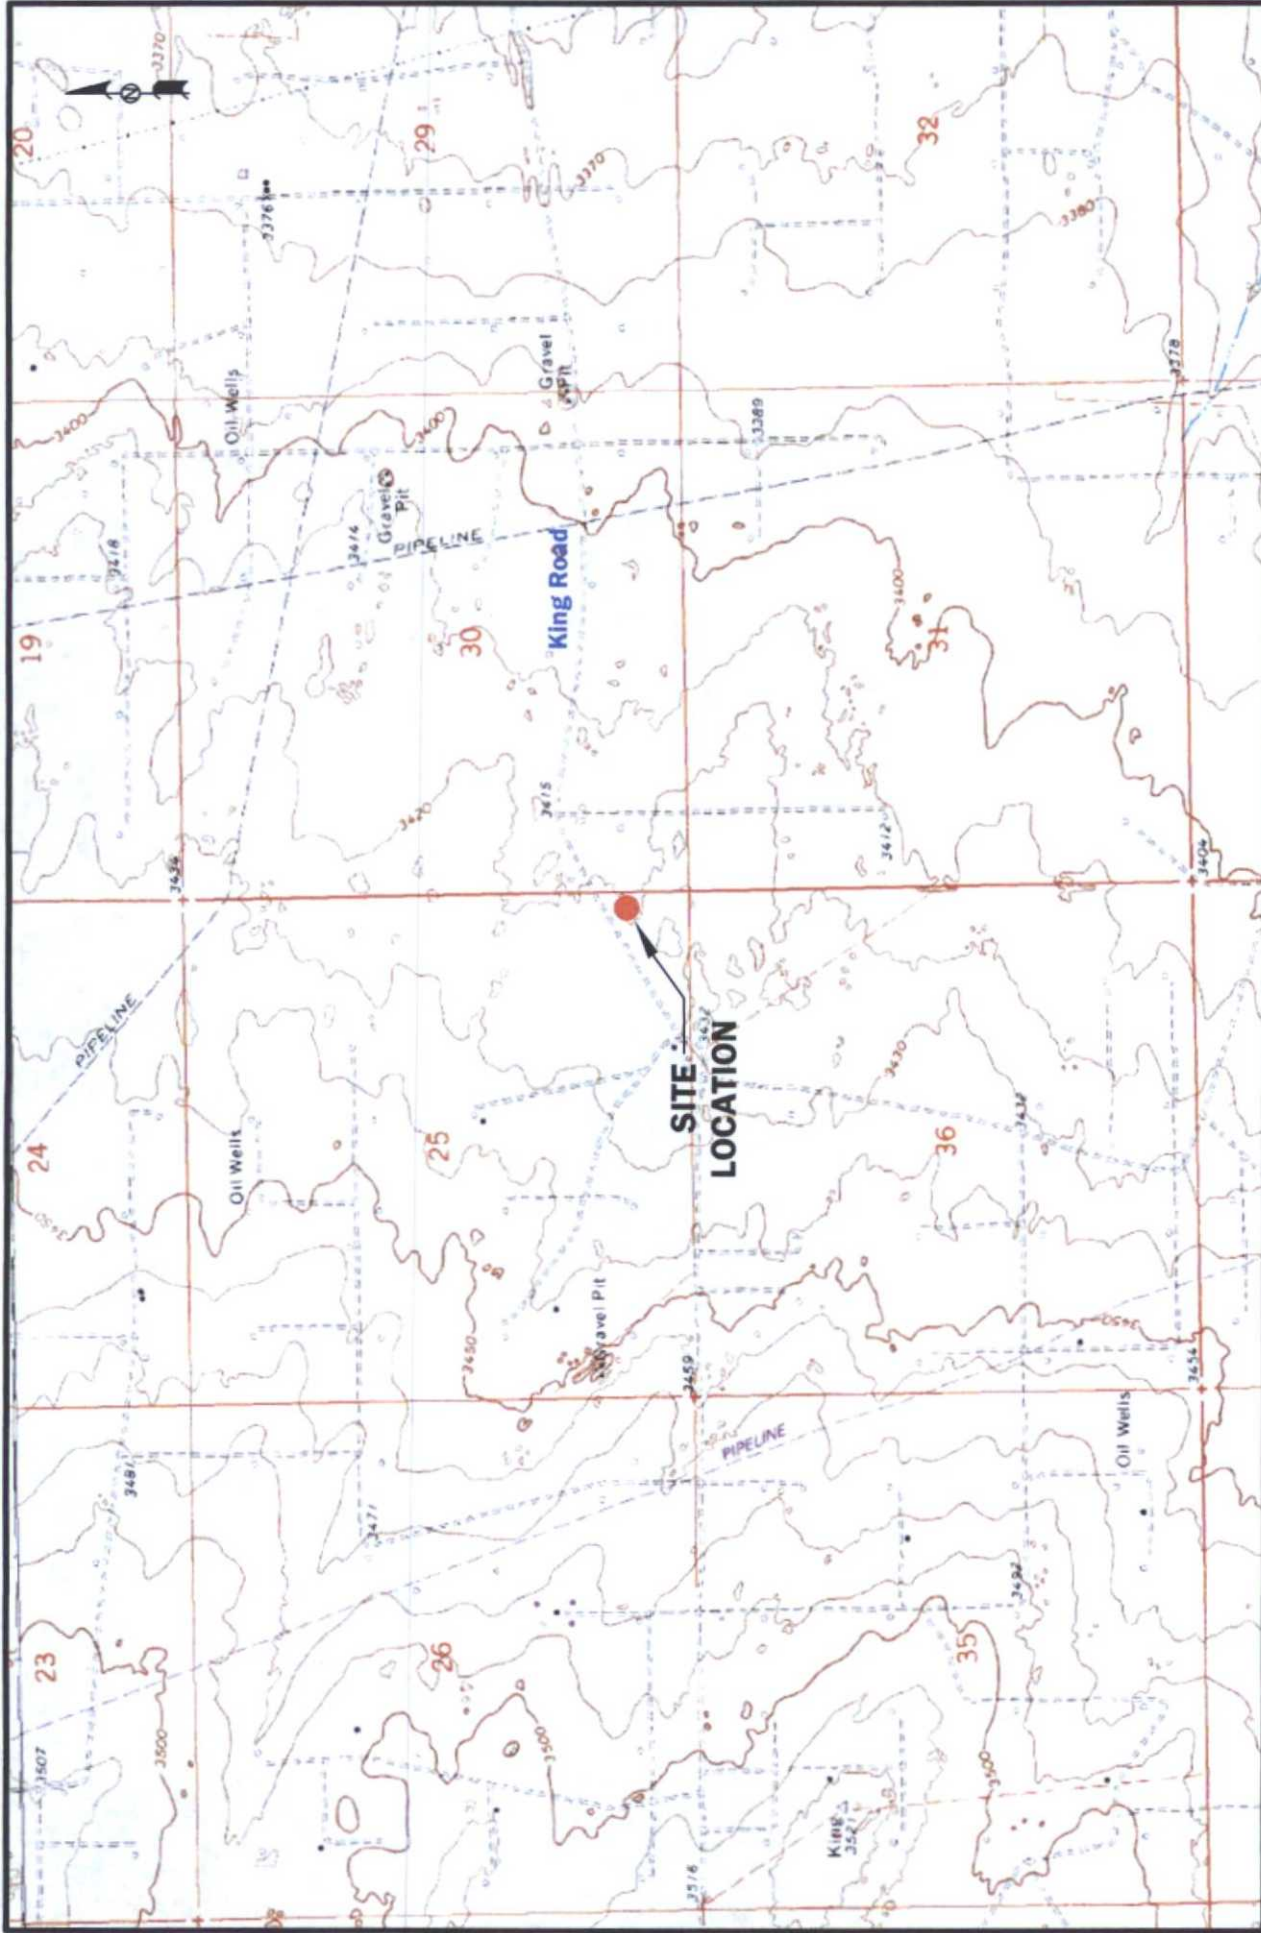

This report has been prepared for the benefit of Southern Union Gas Services. The information contained in this report, including all exhibits and attachments, may not be used by any other party without the express consent of NOVA Safety and Environmental and/or Southern Union Gas Services.

### Notes and Definitions

QM-05 The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data is acceptable.

### Notes and Definitions

QM-05     The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data is acceptable.

DET        Analyte DETECTED

ND        Analyte NOT DETECTED at or above the reporting limit

NR        Not Reported

dry        Sample results reported on a dry weight basis

RPD       Relative Percent Difference

LCS       Laboratory Control Spike

MS        Matrix Spike

Dup       Duplicate

Report Approved By:

Date:

8/31/2012

Brent Barron, Laboratory Director/Technical Director
