*Sandy Federal #23 has been renamed the Forty Niner Ridge 25 Fed #222H – Paperwork is pending approval at BLM & NMOCD.

Please see attached plats for information regarding well location.

The BLM's interest is common for the two leases.

Oil – Off Lease Measurement, Sales and Storage – No commingle between leases

The central-tank battery is located on the Forty Niner Ridge Drill Island in the SESE, Sec. 23-T23S-R30E. The facility will handle the production for all wells in the three sections; however, oil production is produced into separate tanks for each federal lease. The central facility reduces liability with primary exposure to one facility and reduces lease road/location maintenance. The surface disturbance is minimal due to having one production facility. Allocation to the well is based upon monthly well tests.

The Forty Niner Ridge Battery will have five oil tanks and two water tanks for the oil and water production from the Forty Niner Ridge 23 Federal and Forty Niner Ridge 25 Federal wells and three oil tanks and two water tanks for the oil and water production from the Sandy Federal wells. Oil will be sold by truck load LACT at each federal lease (Sandy – 08388099 & Forty Niner – 07778599).

Oil production will be allocated to each well based upon the volume measured at the oil allocation meter for each well.

Gas – Off Lease Measurement and Sales and Lease Commingling

The primary sales meter is located on the Forty Niner Ridge Drill Island in the SESE, Sec. 23-T23S-R30E. The production from each well will have its own three phase separator and gas allocation meter to meter the gas.

The Forty Niner Ridge battery will have a common DCP central delivery point #13135413 which is located on the west side of the facility.

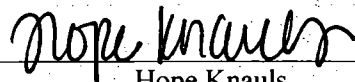

Gas production will be allocated on a daily basis based on the volume measured at the allocation meter and the volume sold at the DCP Gas Sales Meter. The gas production from the production equipment will be metered at the allocation meter and then commingled and sold at the DCP Gas Sales meter. The meters will be calibrated on a regular basis per API, NMOCD, and BLM specifications. The BLM & OCD will be notified of any future changes in the facilities.

Process and Flow Descriptions:

The flow of produced fluids is shown in detail on the enclosed facility diagram, along with a description of each vessel and location of wells, and gas sales meter. A map is also enclosed with lease boundary information. The proposed commingling is appropriate based on the BLM's guidance in IM 2013-152. The proposed commingling will maximize the ultimate recovery of oil and/or gas from the federal leases and will reduce environmental impacts by minimizing surface disturbance and emissions. The proposed commingling will reduce operating expenses, as well as, not adversely affect federal royalty income, production accountability, or the distribution of royalty.

Cimarex Energy Co. understands the requested approval will not constitute the granting of any right-of-way or construction rights.

Working, royalty, and overriding interest owners have been notified of this proposal via certified mail (see attached).

A handwritten signature in black ink, reading "Hope Knauls", is written over a horizontal line.
