Vernon,

Thanks for sending the diagram. I still do not know the depths the samples were taken, but assuming Terry is more familiar with this site than I am, and to keep things moving, I will say you are good to proceed.

Received these results late yesterday and reviewed them last night. The site is good to close for the BLM pending like approval from the OCD.

Subject Closure Request Turner B #118

Good morning,

Please see the attached lab results from the confirmation sampling at Linn's Turner B #118. All contaminant levels appear to be at or below closure levels. I request permission to to line the pit area and back fill the all open excavations with clean material and re-seed the area.

Thanks,
Vernon

Vernon,

Sorry to be like this, but I refer everyone back to Terry's correspondence dated May 17 and mine dated May 19. The discussion was about having a site diagram and more information included with analytical data. I have no idea where these samples were taken in relation to the release and no idea at what depth they were taken. A hand drawn diagram is fine, but once again, with the magnitude of projects that roll through this office, I gave up trying to remember each one individually a long time ago. While the numbers in the analytical data look ok, right now they are just numbers on a page.
