THIRD MONTHLY MONITORING REPORT
AMOCO PRODUCTION CORPORATION
SAN JUAN GRAVEL A-1 - TANK BATTERY
PRODUCTION TANK PIT AREA
SE/4, SE/4 (P) SECTION 21, T29N, R13W, NMPM
FARMINGTON, SAN JUAN COUNTY, NEW MEXICO

INTRODUCTION

Amoco Production Company has installed a pump and treat system as part of a proposed Remedial Action Plan (RAP) to abate groundwater contamination from the production equipment and storage system associated with the subject well located south of Farmington, in the Southeast 1/4 of the Southeast 1/4 of Section 21, Township 29N, Range 13W, NMPM, San Juan County, New Mexico (refer to Vicinity Map - Appendix A). Monthly monitoring of the remediation system has been required by the New Mexico Oil Conservation Division (NMOCD) for the initial three months of the system operation.

Included in this Monthly Monitoring Report (MMR) is the treatment system analyses and an outline of the future sampling schedule for the remaining 1993 calendar year and the first three quarters of 1994 (located within the Purpose and Scope of Work section on the following page).

PURPOSE AND SCOPE OF WORK

The purpose of this monthly monitoring is to verify that the pump and treat system is effectively remediating groundwater contamination at the referenced site. Verification is conducted by monitoring the Air Stripper Effluent.

The scope of work includes collection of groundwater samples for benzene, toluene, ethylbenzene, and xylenes (BTEX), Polynuclear Aromatic Hydrocarbons (PAH), heavy metals, and major cations and anions analyses using appropriate EPA laboratory methods.

The scope of work consisted of the following:

- A. Sampling of the Air Stripper effluent to verify the treated water contaminant concentrations during the remediation.
- B. Documentation of analytical results from the sampling event.
- C. The remaining 1993 calendar year and first 3 quarters of

FUTURE SAMPLING SCHEDULE

MW - 3	X		X	
MW - 4		X		X
MW - 5	X		X	
MW - 6		X		X
MW - 7	X		X	
EFFLUENT	X	X	X	X

ANALYTICAL RESULTS

For this monthly monitoring, only the effluent from the Air Stripper was required to be sampled. The BTEX groundwater sample was collected in laboratory supplied new 40 ml VOA vials and preserved with 5% HgCl_2 ; Polynuclear Aromatic Hydrocarbons (PAH) in a new 1 liter amber coated glass container with teflon closure, heavy metals in a 250 ml plastic container, and the major cations and anions in a 1 liter plastic container. The groundwater samples were placed on ice and transported to Envirotech's laboratory later that day. Sampling was performed in accordance with USEPA SW-846 protocol.

The field and laboratory results are summarized as follows:

1. Table 1 summarizes the field sampling conditions for this monthly monitoring report.
2. Table 2 summarizes the laboratory analyses for the effluent.
3. Table 3 summarizes the Clean-up Standards for groundwater for the State of New Mexico.

All analytical results for the laboratory analyses, laboratory QC/QA, and Chain-of-Custody for this monthly sampling event are presented in Appendix B.

mg/L - equivalent to parts per million.

DISCUSSION

Laboratory Analyses

All laboratory analyses conducted for the Air Stripper Effluent reveal non-detect at the stated detection limit or they are well below regulatory standards. The Polynuclear Aromatic Hydrocarbons analyses have consistently been reported as non-detect at the stated detection limit since the initiation of the remediation system. Most of the heavy metals constituents have steadily decreased to non-detect for the analyses conducted.

In addition, the Total Dissolved Solids analysis for the Air Stripper Effluent continues to indicate that the groundwater contains less than 10,000 ppm.

System Effectiveness

The data presented within this report clearly shows that Benzene present in the Effluent are effectively stripped by the Air Stripper unit. Based on observations, the recovery wells are delivering hydrocarbon contaminated water into the oil/separator tank where any free product is removed prior to routing to the Air Stripper.

LIMITATIONS AND CLOSURE

The scope of Envirotech's services was limited to sampling of the Air Stripper Effluent. All work has been performed in accordance with generally accepted professional practices in geotechnical/environmental engineering and hydrogeology.

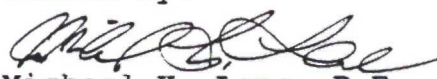

The Monthly Monitoring Report has been prepared for the exclusive use of Amoco Production Company as it pertains to their San Juan Gravel A -1 - Tank Battery facility located on the SE/4 of the SE/4 of Section 21, Township 29N, Range 13W, NMPM, San Juan County, New Mexico.

I certify that I am personally familiar with the investigative work at the site, the site conditions, and the reported information as described and this document.

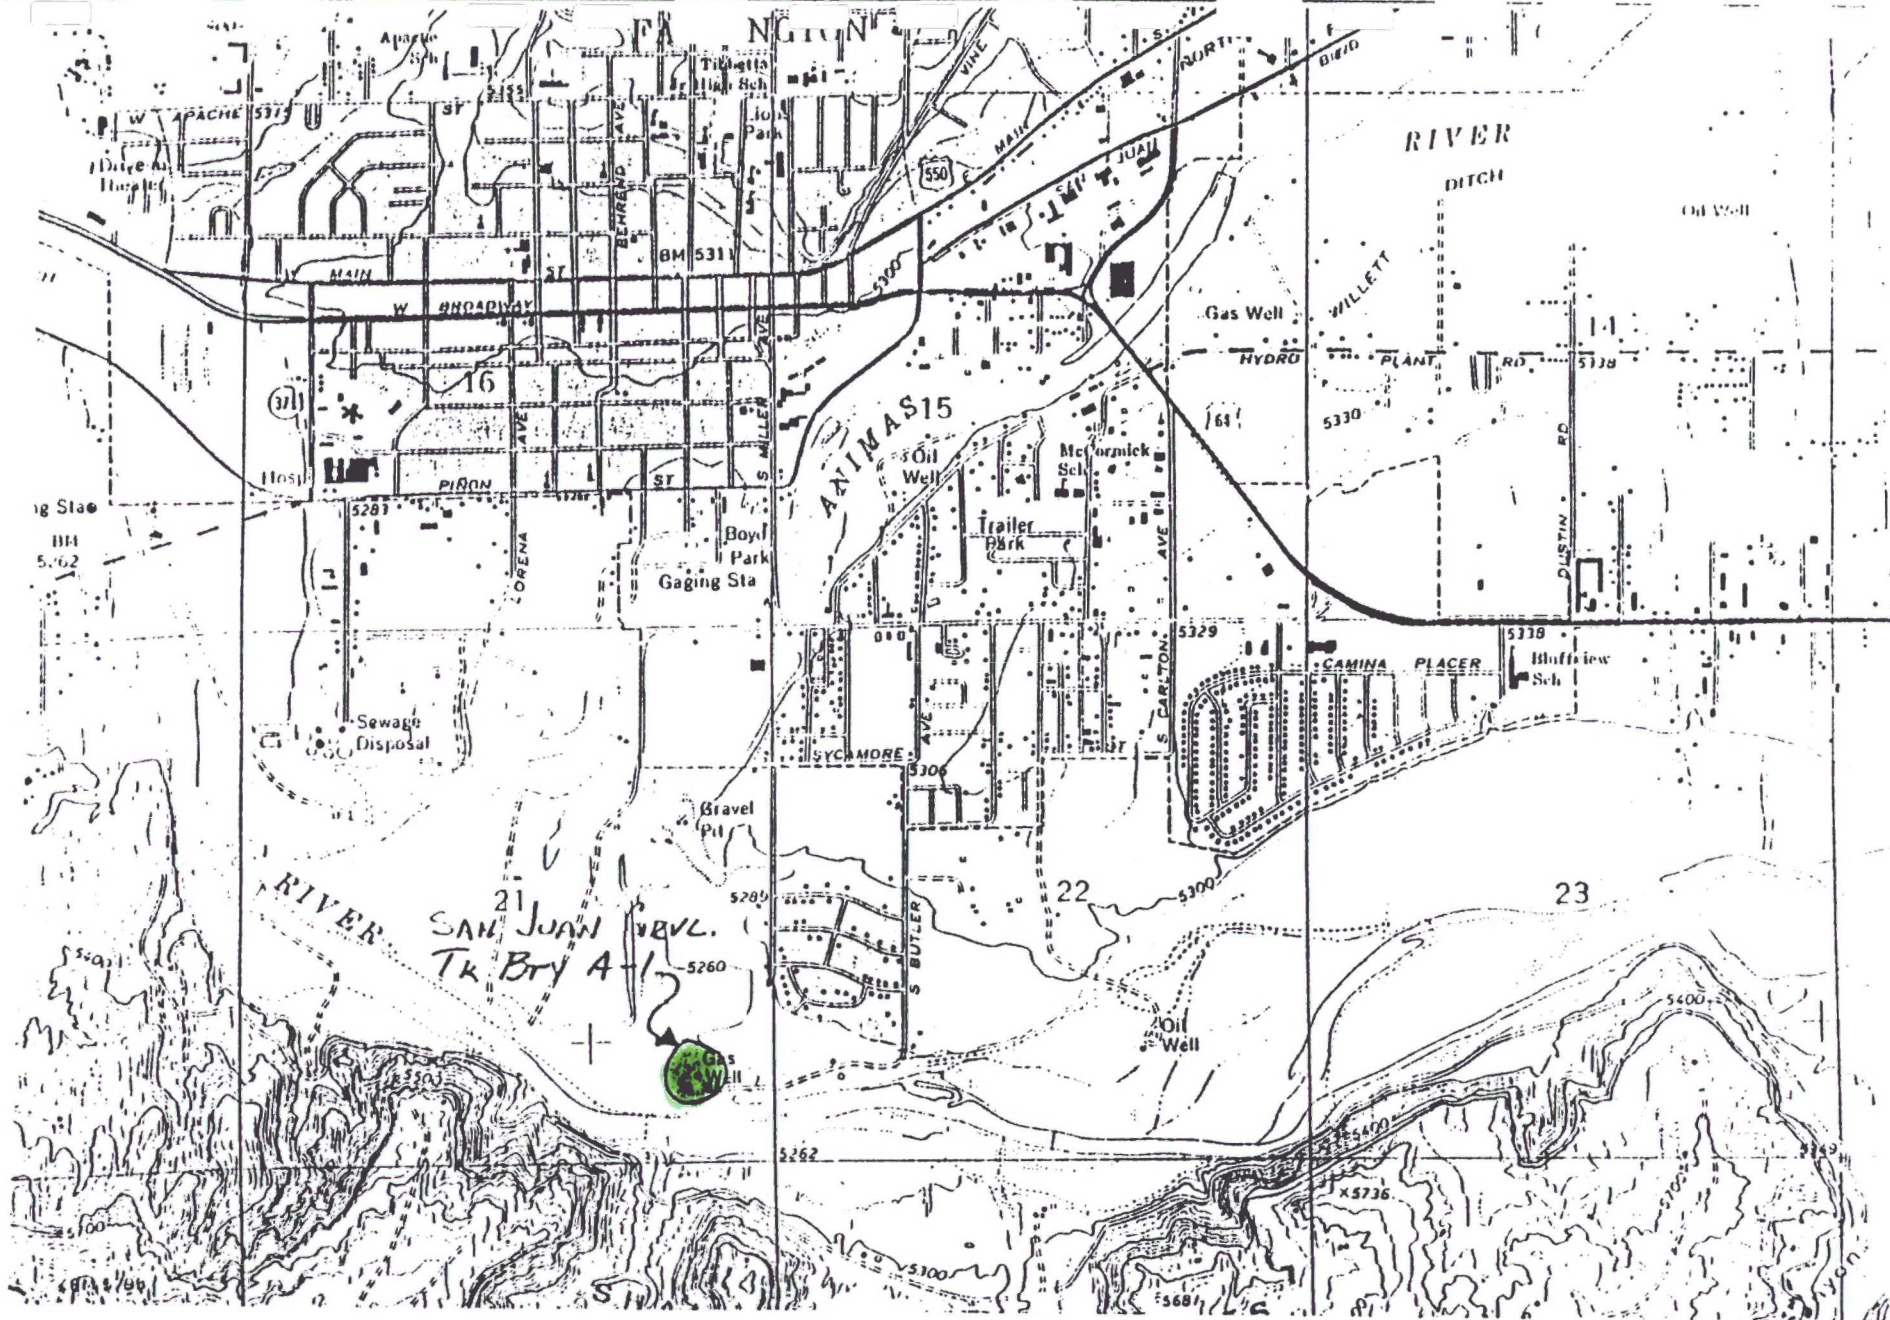

Respectfully Submitted,
ENVIROTECH, INC.

CHAIN OF CUSTODY RECORD

C4028

Client/Project Name <i>Amoco 92140</i>			Project Location <i>PROD. PIT</i> <i>ST GUL A-1</i>		ANALYSIS/PARAMETERS								
Sampler: (Signature) <i>Kelly Johnson NV</i>			Chain of Custody Tape No.		No. of Containers <i>STEX (8020)</i>	<i>2</i>	<i>✓</i>						Remarks
Sample No./ Identification	Sample Date	Sample Time	Lab Number	Sample Matrix									
<i>INJECTION SIDE</i>	<i>10/11/93</i>	<i>1006</i>	<i>6282</i>	<i>WATER</i>									
Relinquished by: (Signature) <i>Kelly Johnson NV</i>			Date <i>10/11/93</i>	Time <i>1135</i>	Received by: (Signature) <i>Tony Tinstano</i>			Date <i>10/11/93</i>	Time <i>1140</i>				
Relinquished by: (Signature)					Received by: (Signature)								
Relinquished by: (Signature)					Received by: (Signature)
