### Oil & Gas Metering:

The production from all wells will flow to the Fred Turner Jr. B Central Tank Battery through a 4' x 20' production heater treater. The oil will flow to two tanks and then will be sold through a LACT meter (S/N LM 22485) and sent down a Holly EP sales pipeline.

Gas from the wells is sent from the production heater treater to Targa sales meter (S/N 11800115).

All water will be sent to the Warren McKee Central Tank Battery.

All wells have been on production for at least 10 years and are in Range 3 of decline. The wells can be reasonably expected to have a decline rate of less than 5 percent, as specified in Hearing Order R-14299. Therefore, wells will be tested at least once per month for a minimum of 24 hours through a 3' x 10' three-phase test separator with turbine meters for oil (S/N 314109), water (S/N 313872) and an orifice meter for gas (S/N 333613).

The oil and gas meters will be calibrated on a regular basis per API and OCD specifications. The OCD will be notified of any future changes to the facility.

### Process and Flow Descriptions:

The flow of production is shown in detail on the enclosed facility diagram. Also enclosed is a map showing the locations of wells and facilities. The commingling of this production is the most effective means of producing the reserves and will reduce the surface facility footprint.

OXY USA WTP LP understands the requested approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument. These applications will be submitted separately for approval per NMOCD regulations.

\* Pursuant to Statewide rule 19.15.12.10(C)(4)(g) OXY USA WTP LP requests the option to include additional pools or leases within the defined parameters set forth in the order for future additions.

The working interest, royalty interest and overriding royalty interest owners have been notified of this proposal by certified mail (see attached).
