NW/4 Section 19, T29N – R13W
San Juan County, New Mexico
Administrative Order SWD - 974

Dear Mr. Catanach:

Lance Oil and Gas Company, Inc. respectively requests a modification to previously approved Administrative Order SWD – 974 dated April 4, 2005. The original order specified a Maximum Allowable Operating Pressure (MAOP) of 1,356 psig. Lance has fracture stimulated the Entrada Formation on June 18, 2006 pursuant to our Sundry Notice dated 06/05/06 and re-ran the step rate test on July 7, 2006. An increase in the MAOP up to 2,246 psig is justified with the newest step rate test analysis and is discussed below.

The Salty Dog #6 well was spud on October 9, 2005 and reached total depth of 7,220' KB on November 25, 2005. The well was perforated in the Entrada Sandstone Formation from 6,775' – 6,825' KB and 6,845' – 6,880' KB with 4 SPF and 120 degree phasing. The two perforated intervals were isolated with a bridge plug and packer and acidized with a total of 3,520 gallons 15% HCL. The 2-7/8" internally plastic coated tubing was run in the hole with a 5-1/2" packer. The packer was set at 6,680' KB with packer fluid circulated up the backside. The well was ready for water injection pursuant to the originally approved Administrative Order SWD – 974 with an MAOP of 1,356 psig.

Additional Completion Operations

The originally perforated and completed Entrada Sandstone Formation intervals were acidized with 15% HCL and rock salt pursuant to Sundry Notice dated 06/28/06. Injection commenced immediately following the acid and rock salt stimulation. However, the service company experienced a multitude of surface problems pumping the rock salt, thus the stimulation did not effectively increase injection.

Injection operations following the acid and rock salt stimulation continued to fall short of expectations. Finally, a fracture stimulation was approved by the NMOCD and pumped by Halliburton Energy Services on June 18, 2006. A total of 400,000 lbs of 20/40 Ottawa sand was placed into the Entrada formation. The ISIP at shutdown was 1,742 psig with a frac gradient of 0.69 psi/ft. Initial injection rates and pressures following the fracture stimulation appear satisfactory, however, the injection quickly approached the MAOP of 1,356 psig and the well shut down due to exceeding the MAOP on June 30, 2006.

2006 JULY 14 AM 11:00

In addition, the casing pressure increased and the packer was determined to have come unset on July 3rd or 4th, 2006 and injection operations ceased. During the shutdown period and after workover operations commenced, Lance requested approval to run another Step Rate Test in anticipation of increasing the MAOP. Field operations proceeded with a new 5-1/2" packer set at 6,680' KB with the wellbore prepared for a Mechanical Integrity Test (MIT) and Step Rate Test (SRT) on last Friday morning, July 7, 2006. The MIT and SRT were witnessed by Ms. Monica Kuehling from the NMOCD on Friday, July 7, 2006.

Step Rate Test #2 (7/07/06)

The latest SRT bottomhole pressure data from Tefteller, Inc. is attached for your perusal (Attachment 1). Tefteller, Inc pressure gauges were set at 6,850' KB and the SRT commenced at approximately 10:15 am, July 7, 2006. The test started at 1/4 bpm and increased in 1/2 bpm increments every 30 minutes up to 6-1/2 bpm. Lance became concerned with the amount of water left and increased the injection rate from 6-1/2 bpm to 8-1/4 bpm with intentions of increasing to 10-1/4 bpm with the next step. Unfortunately, Halliburton pump trucks started experiencing pump problems along with an emergency shutdown of 7 minutes with rates in excess of 8-1/4 bpm and the data from 8-1/4 bpm to 10-1/4 bpm is suspect. The Halliburton Energy Services SRT operations summary is also attached for your perusal (Attachment 2).

Lance has prepared Table 1 with the injection rate, surface pressure (Halliburton data) and bottomhole pressure (Tefteller data) values. It is preferable to plot bottomhole pressure versus rate to eliminate any friction pressure affects indicating the maximum surface pressure at the formation injection pressure. The injection rate, surface and bottomhole pressures have been graphed and are included as Figure 1. Lance believes that the formation breakdown pressure has not been observed even at 8-1/4 bpm, surface pressure of 3,111 psig and a bottomhole pressure of 4,060.3 psig. In our opinion, the formation breakdown pressure utilizing bottomhole pressure data was never achieved in this test.

Lance is requesting a maximum allowable operating pressure (MAOP) of 2,246 psig based upon the step rate test at 6-1/2 bpm. This rate equated to a bottomhole pressure of 3,994.5 psi or 0.582 psi/ft injection pressure gradient. Your timely approval would be appreciated. Pls feel free to call Tom Erwin (505-598-5601 Ext 5563) if you have any questions.

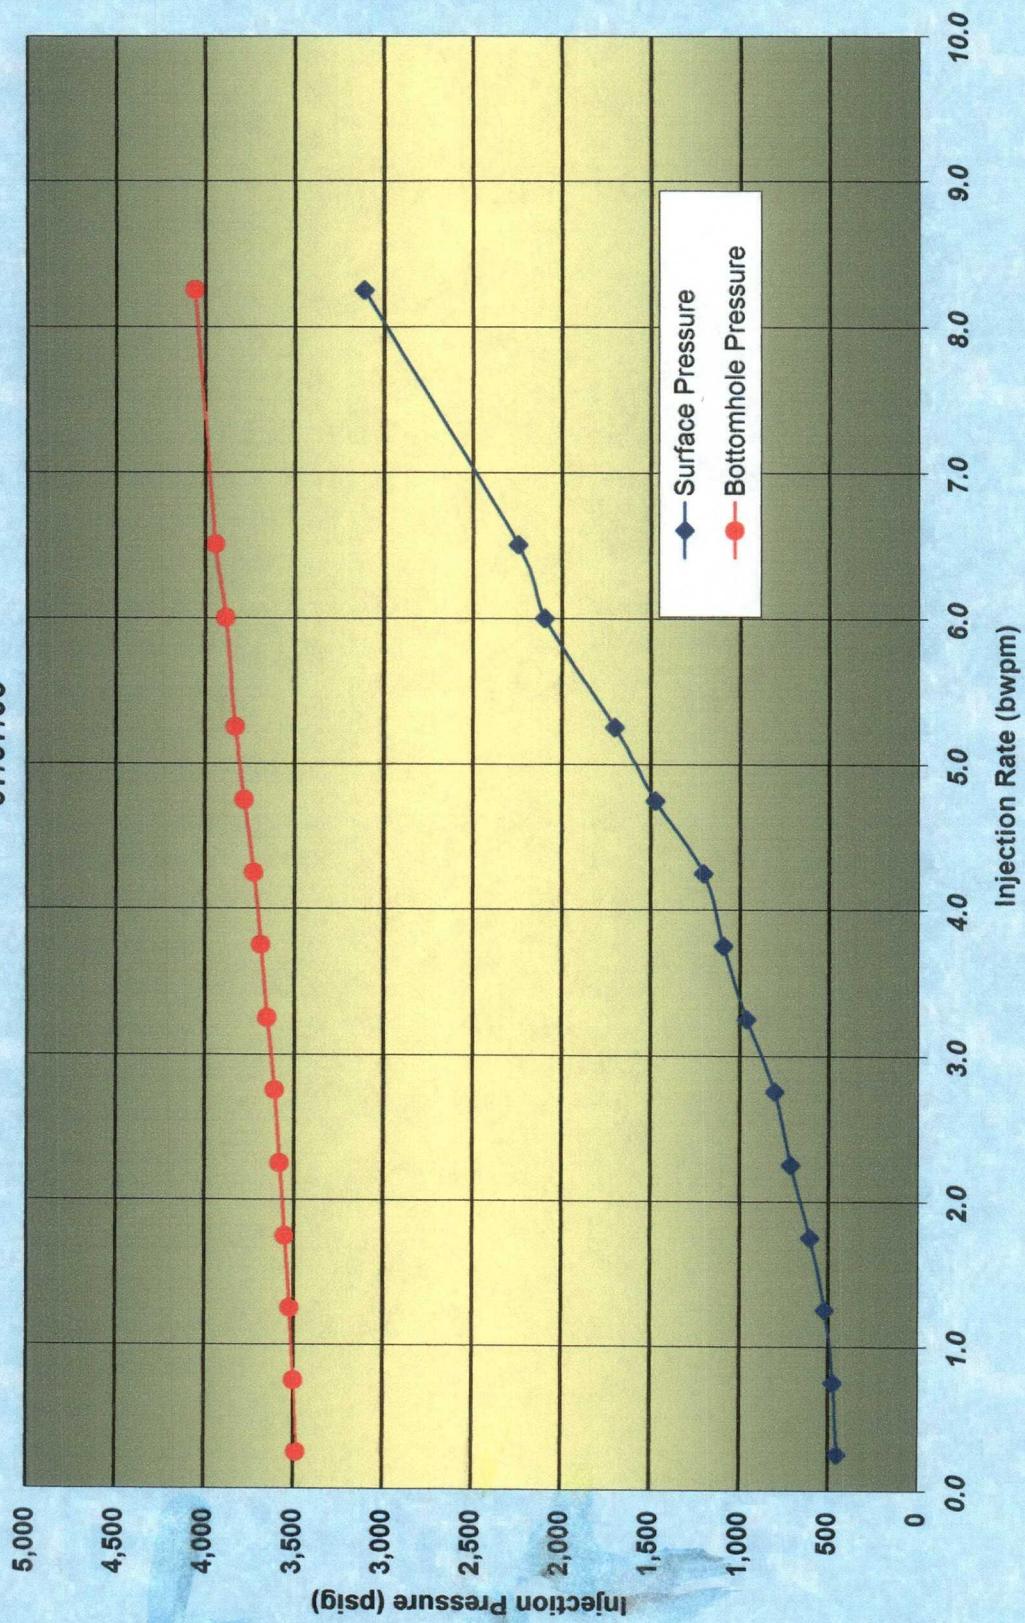

Sincerely,
LANCE OIL AND GAS COMPANY, INC.

Thomas M. Erwin

Lance Salty Dog 6 SWD Additional Perforation Recommendations

Add a 3rd set of perforations to the Entrada Sandstone completion interval for water disposal.

It has been determined that the Entrada interval needs a stimulation to adequately take the volumes of water we need to inject without pressuring-up. To facilitate this further still, more of the Entrada sandstone section will be opened. Below are the NEW perforations to add to the existing ones that currently go from 6775 – 6880, gross. Although porosity greater than 10% is found all the way to the top of the Chinle at 6930, the base of the new perforations will be at 6918 to help avoid any tendency for the frac to drift out of zone.

Additional perfs, Entrada Sandstone – 80 total shots

Perforation Interval #3	Total Ft	Density	# Shots	Shot Dia.	Phasing
6898 - 6918	20 ft	4 SPF	80 Shots	.42 in	120 Deg

1.0 EXECUTIVE SUMMARY

Tom Erwin
Lance Oil & Gas
, NM

Dear Tom Erwin,

Halliburton appreciates the opportunity to perform the stimulation treatment on the Salty Dog #6. A pre-job safety meeting was held where details of the job were discussed, potential safety hazards were reviewed, and environmental compliance procedures were outlined. Pump time was 477.14 min.

The proposed treatment for Lance Salty Dog Injection Test consisted of:

- 57960 gal of FIELD SALT WATER.

The treatment actually pumped consisted of:

- 84106 gal of FIELD SALT WATER.

The average BH treating rate was 4.1 bpm and average WH pressure was 1428 psi.
The total liquid load to recover is 84106 gal.

Halliburton is strongly committed to quality control on location. Before and after each job all chemicals, proppants, and fluid volumes are measured to assure the highest level of quality control. Tank fluid analysis, crosslink time, and break tests are performed before each job in order to optimize the performance of the treatment fluids.

Halliburton maintains a continuous quality improvement process and appreciates any comments or suggestions that you may have. Halliburton again thanks you for the opportunity to perform service work on this well. We hope to be your solutions provider for future projects.

Respectfully,

Donald Moats

Serving the Rocky Mountain Area

07/11/06
File Reference F162711.RED

Page A

Customer LANCE OIL AND GAS CO., INC.
Street P.O. BOX 70
City/State KIRTLAND, NM 87417
Country USA
Service Company TEFTELLER, INC.

Well Name SALTY DOG NO. 6
Well Location SAN JUAN COUNTY, NM
Field / Pool
Status (Oil, Gas, Other) SALT WATER DISPOSAL WELL

Test Type STEP RATE/FALL-OFF TEST
Date of Test 7-7-2006
Producing Interval
Recorder Depth 6850'
Recorder Position 6850'
Shut In Date Start: 7-7-2006
Stop: 7-8-2006
Duration: 24 HRS. TANDEM ELEC. MEMORY INST. TIME

Bottom Hole Temperature

Gauge Identification

Gauge Manufacturer MICRO-SMART SYSTEMS
Serial Number 162
Model Number SP2000
Pressure Range
Battery Type
Calibration I.D.
Last Calibration 8/26/ 5

Gauge Setup Parameters

Probe Set Up Time 7/ 7/ 5 8: 3: 0
Time Delay to First Reading
Test Type Selection STEP RATE/FALL-OFF TEST
Test Duration Selection 24 HRS. TANDEM ELEC. MEMORY INST. TIME

COMPANY: LANCE OIL AND GAS CO., INC.
