Gentlemen:

The above referenced well is a Chacra/Mesaverde/Gallup commingle. Attached is a copy of the allocation for the commingling of the subject well completed on April 17, 2002. DHC-2972 was issued for this well.

Gas:	Gallup	0%
	Mesaverde	65%
	Chacra	35%
Oil:	Gallup	100%
	Mesaverde	0%
	Chacra	0%

The existing Gallup formation is an oil producer. Because the two formations added are gas producers, the percentages are based upon separator tests done during workover operations. Because the oil production did not increase with the addition of the Chacra and Mesaverde formations, oil production remains allocated solely to the Gallup formation. Please let me know if you have any questions.

Sincerely,

Peggy Cole
Regulatory Supervisor

Production Allocation Documentation

Albright #12

Production Allocation

Based on Remaining Reserves

Mesaverde Recomplete April 2002

SEPARATOR TEST*

*Since the existing Gallup well was an oil producer, a separator test was run on the two gas-producing formations added.

	<u>RR</u>	<u>Allocation %</u>
Chacra	278.0	35%
Mesaverde	<u>526.0</u>	65%
Both	804.0	

CONDENSATE

Since oil production did not increase with the addition of the Chacra and Mesaverde formations, oil production remains allocated solely to the Gallup Formation.
