Re: Dry Creek #1,
I Sec. 5 - T24N - R10W
San Juan County, New Mexico

Dear Mr. Porter:

1650' FSL and 1180' FEL

The Dry Creek #1 wildcat well was drilled to a deeper horizon, being the Dakota formation, which proved to be dry. Casing was set on plug back T.D. of 5180', being the Bisti - Lower Gallup sand.

This well has been completed as a Bisti - Lower Gallup gas well with an oil-gas ratio of 111 MCF to one bbl. of oil and the S/2 Sec. 5, 24N, 10W is being dedicated as provided in Rule 6.

Since this well does not meet location requirements of Rule 3, we are asking for administrative approval of this Bisti - Lower Gallup gas well location under Statewide Rule C-104. We have notified the offset operators on this request.

Thank you for your attention to the above.

Yours very truly,
George E. Coleman
