Describe Cause of Problem and Remedial Action Taken Bleeder valve on receiver was not securely tightened which resulted in release of sour crude oil. The line is a 6-inch steel gathering line that produces approximately 593 barrels of oil per day. The pressure on the line is approximately 60 psi and the gravity of the sour crude oil is 34.3. The sour crude has an H₂S content of <10 ppm.

Describe Area Affected and Cleanup Action Taken.* The impacted soil was excavated and stockpiled on plastic. Aerial extent of surface impact was 1,400 square feet.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
