NSC-2487 RULE-104 F (E)

March 8, 1988

Mr. David Catanach, U.I.C. Director New Mexico Energy and Minerals Dept. Oil Conservation Div. P. O. Box 2088 Santa Fe, New Mexico 87504

Undwignated Cedar Point Strawn Poul 80 - Aou ded. W/2 NEI4 Sect 27

Re: Unorthodox Well Location: 2310' FNL & 1980' FEL, Sec. 27-T15S-R30E Cedar Point Fed., Well No. 1 for Read & Stevens, Inc.

Dear Mr. Catanach:

Read & Stevens, Inc. is applying for administrative approval of an unorthodox well location for the above captioned well under the provisions of paragraph F of rule 104 of the New Mexico Oil Conservation Commission Rules and Regulations.

Field rules require that the SW4 and NE4 of a 160 acre unit be drilled with 80 acre spacing and a 200 foot radius limit from the center of the forty. Due to the field rules and terrain problems, as noted in enclosed copy of letter, the location needs to be on top of the large sand hill and not on the sides.

A lease ownership plat of the area of the proposed well is enclosed. Each offset operator is being notified, by certified mail, with three copies of this letter and is asked to indicate waiver of objection, by authorized signature in the space provided, on two copies of this letter.

The operators are requested to mail one signed copy to Mr. David Catanach, New Mexico Oil Conservation Dept. and one signed copy to George R. Smith, Energy Administrative Services Co., in the stamped, self addressed envelopes enclosed.

Sincerely yours,

ENERGY ADMINISTRATIVE SERVICES CO.

edezil Smith

Re: Unorthodox Location: 2310' FNL & 1980' FEL, Sec. 27-T15S-R30E Cedar Point Fed., Well No. 1 for Read & Stevens, Inc.

Dear Ms. Davidson:

Read & Stevens, Inc. is filing an APD with the Roswell office of the Bureau of Land Management for the above captioned well. According to the field rules for the Cedar Point Strawn field, a well must be located within a 200 foot radius of the center of the SW4 or NE4 of each quarter section. The above location is correct as to the SW4 of the NE4, but because of terrain this location is 130' south of the 200' radius.

This area is part of the Mescalero Sands which form many sand dunes and deflation basins. This location is on top of a very large sand hill, some 1000 feet across, and is 20 to 30 feet above the surrounding terrain. The entire hill is made up of sand dunes and deflation basins, with the basins being 10 to 15 feet below the top level as you move away from the location. Any move to the north, east or west would require cutting into the side of the sand hill with a 10 to 12 foot cut on one side, which would be difficult to work around because of the blowing exposed sand, and the Bureau of Land Management does not like cuts of this magnitude. Lack of approval from BLM for alternate locations would make it very difficult to drill this 80 acres. For this reason, Read & Stevens, Inc. is requesting administrative approval to use the present location at 2310' FNL & 1980' FEL of this section.

Very Truly Yours, ENERGY ADMINISTRATIVE SERVICES CO.

Deorge R. Smith
