If a Watercourse was Impacted, Describe Fully.\*

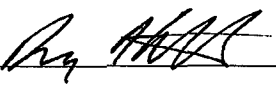

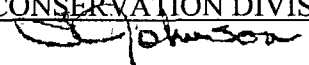

Describe Cause of Problem and Remedial Action Taken.\*

Produced water tank overflowed. Spill was primarily contained within the firewall. Approximately 92 bbl of fluid was removed from the tank battery firewall by vacuum truck. Impacted caliche is being excavated and hauled to a disposal facility.

Describe Area Affected and Cleanup Action Taken.\*

The spill covered an area approximately 120' x 80' within the battery and well pad area. The spill covers an area approximately 10' x 30' off the well pad to the west of the site. Liquid was removed from the site by vacuum truck, and impacted soil was removed and disposed at an NMOCD approved disposal facility. Soil samples will be collected, and laboratory results will be attached to the final C-141 form. The site will be backfilled with clean soil, once closure approval is granted by the NMOCD.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
