Re: Proof of Public Notice for Energen Resources' Carracas Mesa Compressor
Station

Dear Leonard

Environmental Services, Inc. (ESI) on behalf of Energen Resources, Inc. (Energen) is submitting the Proof of Public Notice for the Carracas Mesa Discharge Plan application. The sole neighboring landowner as well as the owner of the land the facility is sited on is the Carson National Forrest.

If you have any questions or would like to request any further information, please feel free to call me at (505) 266-6611.

Sincerely

Cale E. Swanson
Environmental Scientist III

cc: Ed Hasley (Energen)

November 28, 2007

NOTICE OF PUBLICATION

Notice is hereby given that pursuant to New Mexico Water Quality Control Commission Regulations (20.6.2.3106 NMAC), the following discharge permit application has been submitted to the Director of the New Mexico Oil Conservation Division ("NMOCD"), 1220 S. Saint Francis Drive, Santa Fe, New Mexico 87505, Telephone (505) 476-3440:

(GW-363) Energen Resources, Inc., Ms. Kellie Skelton, 2198 Bloomfield Highway, Farmington, New Mexico 87401, has submitted an application for a new discharge plan for their Carracas Mesa Compressor Station built in 2007. It is located in the SW/4 NW/4 of Section 28, Township 32 North, Range 4 West, NMPM, Rio Arriba County, New Mexico. The station provides metering, liquid removal and gas compression to local production lines. Approximately 400 bbl/month of waste water and hydrocarbon liquids, 205 bbl/year maximum waste water, and 605 gal/month of waste oil are generated and stored in NMOCD approved containers onsite within a bermed area prior to disposal at an NMOCD approved facility. Groundwater most likely to be affected by a spill, leak or accidental discharge is at a depth of approximately 800 feet, with a total dissolved solids concentration of approximately 600 - 800 mg/l. The discharge plan addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

The New Mexico Oil Conservation Division will accept comments and statements of interest regarding this application and will create a facility-specific mailing list for persons who wish to receive future notices. Persons interested in obtaining further information, submitting comments or requesting to be on a facility-specific mailing list for future notices may contact:

NOTA DE PUBLICACIÓN

Aviso es presentado conforme a la Comisión de Regulación de Control de Calidad de Agua de Nuevo México (20.6.2.3106 NMAC), un aplicación para permiso para descarga ha sido sometido a el director de la Division de Conservacion de Petroleo, ("NMOCD") 1220 S. Saint Francis Drive, Santa Fe, Nuevo Mexico 87505, (505) 476-3440:

(GW-363) Energen Resources, Inc., Sra. Kellie Skelton, 2198 Bloomfield Highway, Farmington, New Mexico, 87401, a sometido una aplicación para un nuevo plan de descarga para Carracas Mesa Compressor Station construido en 2007. El estación es localizada en la Sudoeste/4 Nordeste/4 de Sección 28, Municipio 32 al Norte, Gama 4 al Oeste, NMPM, Condado de Rio Arriba, Nuevo Mexico. La estación proporciona retiro y la compresión medidores, líquidos del gas a las cadenas de producción locales. Aproximadamente 400 barriles/mes de agua residual y del hidrocarburo, 205 barriles/año agua residual maxima, y 605 galones/mes de aceite residual se generan y se almacenan en envases aprobado por NMOCD en sitio dentro de a bermed área antes de la disposición en una facilidad aprobado por NMOCD. Agua mas probable de ser afectada por derrames accidentales sera de una profundidad de aproximadamente 800 pies con un total de solidos disueltos con concentracion de aproximadament 600-800 mg/L. El plan de descarga consiste de una descripcion de como derrames accidentales a la superficie seran manajados para proteger la agua fresca.

La Division de Conservacion de Petroleo de Nuevo Mexico (New Mexico Oil Conservation Division) aceptara comentarios y declaraciones de interes y creara una lista eespecifica a la facilidad para personas deseando recibir noticias futuras por correo. Personas interesadas en obtener informacion futura o deseando ser puesto en una lista especifica para recibir noticias futuras por correo deben ponerse en contacto con:

NOTA DE PUBLICACIÓN

Aviso es presentado conforme a la Comisión de Regulación de Control de Calidad de Agua de Nuevo México (20.6.2.3106 NMAC), un aplicación para permiso para descarga ha sido sometido a el director de la División de Conservación de Petróleo, (NMOCD) 1220 S. Saint Francis Drive, Santa Fe, Nuevo México 87505, Teléfono (505) 476-3440.

Energen Resources, Inc. Sr. Kellie Skelton, 2198 Bloomfield Highway, Farmington, Nuevo México 87401, ha presentado una aplicación para un nuevo plan de descarga para Carracas Mesa Compressor Station construido en 2007. Se encuentra en el SW/4 NW/4 de la Sección 28, Township 32 North, Range 4 West, NMPM, Rio Arriba County, Nuevo México. La estación provee medición, eliminación de líquidos y compresión de gas para líneas de producción locales. Aproximadamente 400 bbl/mes de agua de desecho y líquidos de hidrocarburo, 205 bbl/año máximo de agua de desecho, y 605 gal/mes de aceite de desecho se generan y se almacenan en contenedores aprobados por NMOCD dentro de un área enrejada antes de su disposición en una instalación aprobada por NMOCD. El agua subterránea más probable de ser afectada por un derrame, fuga o otro tipo de descarga accidental es a una profundidad de aproximadamente 800 pies, con una concentración de sólidos disueltos totales de aproximadamente 600 - 800 mg/l. El plan de descarga aborda cómo se manejarán los productos y desechos del campo petrolero, cómo se almacenarán, cómo se manejarán y cómo se dispondrán, incluyendo cómo se manejarán los derrames, fugas y otros tipos de descargas accidentales a la superficie para proteger el agua dulce.

(GW-363) Energen Resources, Inc., Ms. Kellie Skelton, 2198 Bloomfield Highway, Farmington, New Mexico 87401, has submitted an application for a new discharge plan for their Carracas Mesa Compressor Station built in 2007. It is located in the SW/4 NW/4 of Section 28, Township 32 North, Range 4 West, NMPM, Rio Arriba County, New Mexico. The station provides metering, liquid removal and gas compression to local production lines. Approximately 400 bbl/month of waste water and hydrocarbon liquids, 205 bbl/year maximum waste water, and 605 gal/month of waste oil are generated and stored in OCD approved containers on-site within a bermed area prior to disposal at an NMOCD approved facility. Groundwater most likely to be affected by a spill, leak or accidental discharge is at a depth of approximately 800 feet, with a total dissolved solids concentration of approximately 600-800 mg/l. The discharge plan addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

(GW-004) Chevron U.S.A., Inc., 11111 South Wilcrest, Houston, TX 77099, has submitted a renewal application to the New Mexico Energy, Minerals and Natural

Resources Department, Oil Conservation Division for the previously approved discharge plan (GW-004) for its Eunice North Gas Plant, located in the NE/4 SE/4 of Section 28, Township 21 South, Range 37 East, NMPM, Lea County, New Mexico. The gas plant is shut down, partially dismantled, and is out of operation with the exception of some compression equipment. The address of the facility is State Highway 207 (Eunice-Hobbs Highway), Eunice, New Mexico, 88231. As a result of historical operations at the site, ground water has been contaminated by chromium. Chevron is proposing to remediate the contaminated ground water by injecting calcium polysulfide at fourteen injection wells to reduce the hexavalent chromium to trivalent chromium, with subsequent precipitation of the trivalent chromium from solution on a monthly basis. Materials generated or used at this facility include calcium polysulfide stored in 55-gallon drums. Approximately 900 gallons of make-up water will be mixed with fifty-five gallons of calcium polysulfide to generate a chemical injection solution which will then be pumped into the Ogallala aquifer at 14 injection wells on a monthly schedule. The depth to ground water in the Ogallala aquifer is 37 to 73 feet below the surface and the background total dissolved solids con-

centration is approximately 1200 mg/l.

The NMOCD has determined that the application is administratively complete and has prepared a draft permit. The NMOCD will accept comments and statements of interest regarding this application and will create a facility-specific mailing list for persons who wish to receive future notices. Persons interested in obtaining further information, submitting comments or requesting to be on a facility-specific mailing list for future notices may contact the Environmental Bureau Chief of the Oil Conservation Division at the address given above. The administrative completeness determination and draft permit may be viewed at the above address between 8:00 a.m. and 4:00 p.m., Monday through Friday, or may also be viewed at the NMOCD web site <http://www.emnrd.state.nm.us/ocd/>. Persons interested in obtaining a copy of the application and draft permit may contact the NMOCD at the address given above. Prior to ruling on any proposed discharge permit or major modification, the Director shall allow a period of at least thirty (30) days after the date of publication of this notice, during which interested persons may submit comments or request that NMOCD hold a public hearing. Requests for a public hearing shall set forth

the reasons why a hearing should be held. A hearing will be held if the Director determines that there is significant public interest.

If no public hearing is held, the Director will approve or disapprove the proposed permit based on information available, including all comments received. If a public hearing is held, the director will approve or disapprove the proposed permit based on information in the permit application and information submitted at the hearing.

STATE OF NEW MEXICO ENERGY, MINERALS AND NATURAL RESOURCES DEPARTMENT OIL CONSERVATION DIVISION

Notice is hereby given that pursuant to New Mexico Water Quality Control Commission Regulations (20.6.2.3106 NMAC), the following discharge permit application(s) has been submitted to the Director of the New Mexico Oil Conservation Division ("NMOCD"), 1220 S. Saint Francis Drive, Santa Fe, New Mexico 87505, Telephone (505) 476-3440:

(GW-364) Williams Four Corners, Mr. David Bays, Senior Environmental Specialist, 188 County Road 4900, Bloomfield, N.M. 87413, has submitted an application for a new discharge plan for their Bancos Compressor Station built in 2006. It is located in the NW/4 NE/4 of Section 36, Township 32 North, Range 6 West, NMPM, Rio Arriba County, New Mexico, approximately 34 miles east-northeast of Aztec, New Mexico. The station provides metering, compression, and dehydration services to various producers for the gathering of natural gas for treatment and delivery. Approximately 100 - 8000 bbl/year of condensate/produced water; 500 - 2000 gal/year/unit of wash down/waste water and 500 - 2000 gal/year/engine of used oil are generated and stored in OCD approved containers onsite within a bermed area prior to disposal at an NMOCD approved facility. Groundwater most likely to be affected by a spill, leak or accidental discharge is at a depth of approximately 100 - 500 feet, with a total dissolved solids concentration of approximately 200 - 2000 mg/l. The discharge plan addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

(GW-365) Williams Four Corners, Mr. David Bays, Senior Environmental Specialist, 188 County Road 4900, Bloomfield, N.M. 87413, has submitted an application for a new discharge plan for their Eul Compressor Station built in 2005. It is located in the SE/4 SW/4 of Section 24, Township 32 North, Range 6 West, NMPM, Rio Arriba County, New Mexico, approximately 33 miles east-northeast of Aztec, New Mexico. The station provides metering, compression, and dehydration services to various producers for the gathering of natural gas for treatment and delivery. Approximately 100 - 6000 bbl/year of condensate/produced water; 500 - 5000 gal/year/engine of waste water and 500 - 2000 gal/year/engine of used oil are generated and stored in OCD approved containers onsite within a bermed area prior to disposal at an NMOCD approved facility. Groundwater most likely to be affected by a spill, leak or accidental discharge is at a depth of approximately 100 - 500 feet, with a total dissolved solids concentration of approximately 200 - 2000 mg/l. The discharge plan addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

(GW-132) Black Hills Gas Resources Inc., Mr. Randy Fox, 350 Indiana Street, Suite 400, Golden Colorado, 80401, has submitted a renewal application for the previously approved discharge plan for their Gavilan Compressor Station, located in the SW/4 SE/4 of Section 11, Township 25 North, Range 2 West, NMPM, Rio Arriba County, New Mexico. The facility compresses natural gas from nearby gathering systems. Antifreeze, methanol gas, new and used lube oil are used at the facility. Approximately 210 bbls of condensate and waste water are stored onsite within a bermed area prior to disposal at an NMOCD approved facility. Groundwater most likely to be affected by a spill, leak or accidental discharge is at a depth of approximately 200 - 500 feet, with a total dissolved solids concentration of approximately 12,000 mg/l. The discharge plan addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

(GW-363) Energen Resources, Inc., Ms. Kellie Skelton, 2198 Bloomfield Highway, Farmington, New Mexico 87401, has submit

(GW-363) Energen Resources, Inc., Ms. Kellie Skelton, 2198 Bloomfield Highway, Farmington, New Mexico 87401, has submitted an application for a new discharge plan for their Carracas Mesa Compressor Station built in 2007. It is located in the SW/4 NW/4 of Section 28, Township 32 North, Range 4 West, NMPM, Rio Arriba County, New Mexico. The station provides metering, liquid removal and gas compression to local production lines. Approximately 400 bbl/month of waste water and hydrocarbon liquids, 205 bbl/year maximum waste water, and 605 gal/month of waste oil are generated and stored in OCD approved containers onsite within a bermed area prior to disposal at an NMOCD approved facility. Groundwater most likely to be affected by a spill leak or accidental discharge is at a depth of approximately 800 feet, with a total dissolved solids concentration of approximately 600 - 800 mg/l. The discharge plan addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

The NMOCD has determined that the application is administratively complete and has prepared a draft permit. The NMOCD will accept comments and statements of interest regarding this application and will create a facility-specific mailing list for persons who wish to receive future notices. Persons interested in obtaining further information, submitting comments or requesting to be on a facility-specific mailing list for future notices may contact the Environmental Bureau Chief of the Oil Conservation Division at the address given above. The administrative completeness determination and draft permit may be viewed at the above address between 8:00 a.m. and 4:00 p.m. Monday through Friday or may also be viewed at the NMOCD web site: <http://www.emnrd.state.nm.us/ocd/>. Persons interested in obtaining a copy of the application and draft permit may contact the NMOCD at the address given above. Prior to ruling on any proposed discharge permit or major modification, the Director shall allow a period of at least thirty (30) days after the date of publication of this notice, during which interested persons may submit comments or request that NMOCD hold a public hearing. Requests for a public hearing shall set forth the reasons why a hearing should be held. A hearing will be held if the Director determines that there is significant public interest.

If no public hearing is held the Director will approve or disapprove the proposed permit based on information available, including all comments received. If a public hearing is held, the director will approve or disapprove the proposed permit based on information in the permit application and information submitted at the hearing.

Ms. Kellie Skelton,

The submitted new discharge plan application for the Carracas Mesa Gas Compressor Station has been deemed **Administratively Complete**.

I have attached the **Administratively Complete** letter, the **Draft Permit** and the **NMOCD Public Notice** for this facility to this e-mail.

Please submit to me a public notice for approval. I have attached all details required for public notice, please review and submit to me your version of the public notice. Note all the public notices required carefully for a NEW facility. NOTE: THE NMOCD NEEDS TO APPROVE YOUR PUBLIC NOTICE PRIOR TO PUBLISHING. IF THE NOTICES IS DEEMED ERROUNOUS BY THE NMOCD, THE AGENCY WILL REQUIRE THAT THE APPLICATION RESUBMIT THE NOTICES CORRECTLY.

Thank you for your attention and have a nice day.

llowe

Kellie Skelton,

The yet approved/unapproved discharge plan application process for the Carracas Mesa Compressor Station will not hinder you from "starting up" the station.

If during the technical review portion of the application process the NMOCD finds areas of concern we will require modification of the facility and will annotate the change/modification within the permit and give the applicant allotted time to address it.

Typo, that's her fax number. Her phone number is correctly listed on page 1 of the text of the plan under item #2 - (505) 566-4682

Lowe, Leonard, EMNRD wrote:

Cale,

Thank you for the reply.

Can you get me the number for Kellie Skelton? The number (505-326-6112) noted on the application for her appears to be a wrong number.

My overall question is whom should I address the administrative completeness letter and such documents to for the milestones in the process. It appears that Kellie will be this person and that Cale you will be the one addressing the public notices and further questions pertaining to the application itself.

The final permit appears to be addressed to Mr. Gary Brink, General Manager.

I have attached the Rules and Regulations for the public notice requirements for NEW discharge plans and a flow chart of this process works.

Thank you,

llowe

Leonard,

Anything that requires a legally responsible company representative to sign should have Gary Brink's named on it. He is Energen's General Manager.

Anything that you mail to Energen should be addressed to Kellie Skelton. She is an Environmental/Safety Coordinator for the company. If it is something that Mr. Brink has to sign, she will make sure it gets signed and returned. She will also be your primary contact for anything regarding inspections, monitoring, recordkeeping, reporting, etc.

During processing of the application things sent by mail should be sent to Kellie but I would appreciate being cc:ed. During processing of the application I will be the primary contact for any questions regarding the application. If I am unavailable for some reason Kellie should be able to answer any questions for you.

The newspaper of greatest common circulation in the area of the Carracas Mesa Compressor Station is the Farmington Daily Times. Therefore, we propose to run the public notice in the Farmington Daily Times.

If you have any more questions, please let me know.

 Mr. Cale Swanson,

I have a few initial questions pertaining to the Carracas Mesa Compressor Station.

On the application it notes the following individuals:

Kellie Skelton and Gary Brink.

To whom should I write the permit too?

Who should I contact to inspect this facility?

What newspaper do you intend on publishing your public notice in?

Thank you,

llowe
