Sample PID (field) GRC DRC Chloride Location ppm mg/kg mg/kg mg/kg mg/kg GRAB BELOW FORMER JUNCTION 0.1 <10.0 <10.0 <16 This junction was moved 30 ft west where a new, watertight box was built as part of the pipeline replacement/upgrade program. After the box lumber was removed from the former site, the site was inspected and the surrounding soils did not exhibit any signs of adverse impact from the junction. Soil samples were collected using a hand auger and chloride field tests were conducted on them. All samples yielded low chloride concentrations similar to that of the background sample. Organic vapors were also measured which resulted in very low concentrations as well. The deepest sample (6 ft bgs) collected below the junction was analyzed at a commercial laboratory for confirmation of field tests. Results indicate that neither TPH nor chloride were present within the laboratory's detection limit. The hole from the former junction box was backfilled with clean, imported soil and contoured to the surrounding surface. The surface was seeded with a blend of native vegetation on 9/21/2007 and is expected to return to productive capacity at a normal rate. I HEREBY CERTIFY THAT THE INFORMATION ABOVE IS TRUE AND COMPLETE TO THE BEST OF MY KNOWLEDGE AND BELIEF.
