LIST OF APPENDICES

- A** Laboratory Reports

1. Groundwater Monitoring Activities

1.1 Semi-Annual Groundwater Sampling Events

Two semi-annual groundwater-sampling events have been completed since the last report of remediation activities. These events were completed on June 20, 2007 and December 06, 2007.

Prior to sampling, the depth to water, and the depth to hydrocarbon where phase-separated hydrocarbons (PSH) were present, was determined for each monitoring well. The measured depth to water and the corresponding water table elevation for each monitoring well is presented in Table 1. Similar measurements obtained from the remediation wells are presented in Table 2.

Groundwater samples were collected from selected monitoring wells at the site. Samples were not collected from wells with accumulated PSH in the well casing. Groundwater samples were delivered to a laboratory for analysis for volatile organic compounds (VOCs) by EPA Method 8260, selected inorganic constituents by EPA Methods 6010 or 7470 (mercury), total dissolved solids by EPA Method 160.1, chlorides by EPA Method 325.2, nitrate and nitrite by EPA Method 353.1, and sulfate by EPA Method 375.4. A summary of field measured groundwater quality parameters (pH, temperature, electrical conductivity and dissolved oxygen) is presented in Table 3. A summary of organic and inorganic laboratory results is presented in Tables 4, 5, and 6. A copy of the laboratory results for each of the sampling events is included as an appendix to this report.

1.2 Results/Conclusions from Groundwater Sampling Events

1.2.1 Occurrence and Direction of Groundwater Flow

A water table elevation map based on measurements obtained in the course of the December 6, 2007 sampling event is included as Figure 3. The apparent direction of groundwater flow is consistent with water table elevation maps previously developed for this site.

1.2.2 Lateral Extent of Phase Separated Hydrocarbon

The lateral extent of PSH is currently defined by the intermittent occurrence of PSH at the water table in wells MW-2, RW-1, RW-2, RW-3, and RW-8, and the absence of a measurable thickness of PSH in all other wells. The thickness of accumulated PSH in monitor well MW-2 could not be measured during the last eleven sampling events due to the water table dropping below the total depth of the well.

1.2.3 Condition of Affected Groundwater

The condition of affected groundwater, based on the recent sampling events, has not changed significantly from previous sampling events as evidenced by the information presented in Table 4 and Table 6. The primary constituents of concern are benzene, 1,1-dichloroethane, and trichloroethylene. Distribution maps for BTEX, selected VOCs, and selected inorganic constituents are included as Figure 4, Figure 5, and Figure 6, respectively.

2. Status of Remediation Activities

2.1 Remediation Activities Completed through December 2007

The following remediation activities have been completed since the last report of groundwater remediation activities:

- 1) Two groundwater-sampling events were completed.

2.2 Remediation Activities Planned for January 2008 through December 2008

Semiannual groundwater sampling will continue.

3. Proposed Modifications

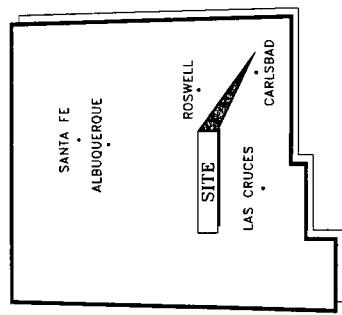

3.1 Modifications to the Routine Groundwater Sampling Plan

Sampling location, frequency and the sampling analysis plan will continue on a semiannual basis. A summary of the sample analysis plan is presented in Table 8.

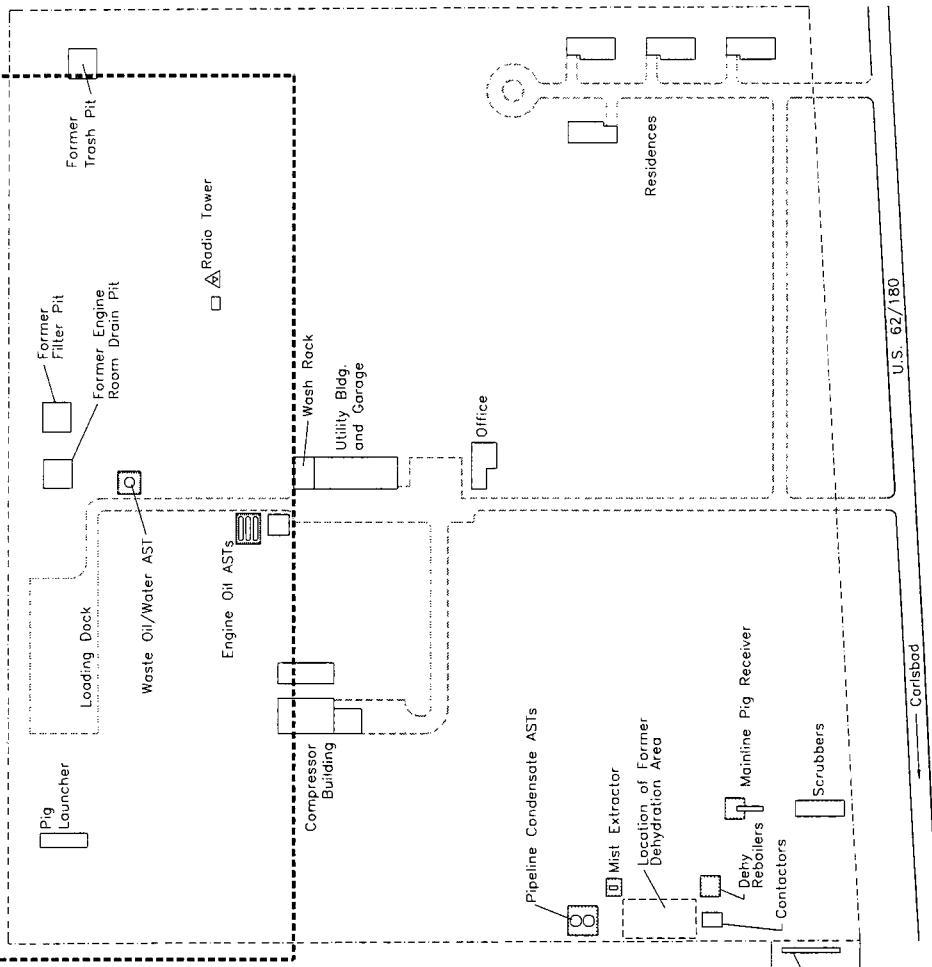

3.2 Reporting Frequency

Annual reporting will continue with the next scheduled report being submitted to the OCD by February 28, 2009.

NOTES:

- (a) Not applicable since no measurable thickness of hydrocarbon is present
- (b) Corrections to ground water surface elevation for presence of hydrocarbon is calculated assuming a specific gravity of 0.88 (0.80 used for 07/17/00 and prior)
- (c) Survey by John West Surveying Co. on October 31, 2000
- (d) Well damaged can no longer access to get water level.
