Re: Amendment of Commingling Orders PLC-124, PLC-144, PLC-175, CTB-482, and CTB-484

<u>State and Federal Leases and Communitization Agreements Affected:</u> E-10169, E-10170, E-7906, NM-1832, NM-0251099-A, NM-34446, NM-384623, NM-384625, NM-384628, NM-4827-B, NM-51107, NM-05551, NM-05551-A, NM-05607, NM-05608, NM-05612-A, NM-06953, NM-70522-A, NM-81677, Unit Agreement 891008508-O and Com Agreements NM SW-242, SW-342, SW-280 and NM 91035, located in Townships 20, 20.5, 21 and 22 South, Ranges 23 and 24 East, Eddy County, New Mexico

Dear Sir:

Marathon Oil Company is proposing to amend the Indian Basin Field Commingling, Off-Lease Storage, Measurement, and Sales agreement in order to increase gas and oil production by reducing system operating pressures. This amendment will supersede Oil Conservation Division Commingling Orders PLC-124, 2<sup>nd</sup> Amendment, PLC-144, 1<sup>st</sup> Amendment, PLC-175, CTB-482, 1<sup>st</sup> Amendment, and CTB-484. Currently separator pressures must be kept high to push oil into the Indian Basin Gas Plant liquid gathering system. This work will allow separator pressures to be reduced by up to 50 psi immediately at some sites and will allow for additional pressure reduction in the future. As reservoir pressure at Indian Basin continues to decline, the ability to reduce separator pressure becomes critical to keeping production rates higher for a longer period of time. While the main value of this work is increased gas and oil production, it is likely that a higher price will be received for the condensate by commingling it with other oil at the MOC Central Facility rather than sending it to the Gas Plant for sale.

Marathon proposes to change only the point of sale for some of the liquid hydrocarbon production covered by the above referenced Commingling Orders. These changes will not affect the measurement methods already agreed upon in these documents. A copy of the application is attached and explains the proposed changes in detail.

If you have any questions, please call me at (915) 687-8321. If you will call me, I will e-mail you the spreadsheet files with the list of interest owners for each lease and the list of wells with their API numbers, Lease numbers, Pools, etc.

Sincerely, Linny Larke

Ginny Larke Engineer Technician

## AMENDMENT TO INDIAN BASIN FIELD COMMINGLE AGREEMENT September 23, 2003

Marathon Oil Company is proposing to amend the Indian Basin Field Commingling, Off-Lease Storage, Measurement, and Sales agreement superseding Oil Conservation Division Commingling Orders PLC-124, 2<sup>nd</sup> Amendment, PLC-144, 1<sup>st</sup> Amendment, PLC-175, CTB-482, 1<sup>st</sup> Amendment, and CTB- 484. In order to increase production by allowing lower operating pressures and to increase the economic producing life of all the wells covered by this Commingling agreement by reducing operating costs, Marathon proposes to change the point of sale for some of the liquid hydrocarbon production covered by the above mentioned Commingling Orders. A brief description of the proposed changes is shown below.

In addition to the wells already being served by the MOC Central Facility (PLC-124), Marathon Oil Company proposes to take the liquid hydrocarbon and water production from the Station 210 Satellite Facility, the Station 215 Satellite Facility, the Station 226 (SIB) Satellite Facility, the Station 235 Satellite Facility, and the Station 311 Satellite Facility, AFTER MEASUREMENT, and recombine them and send them, via pipeline, to the gun barrel tank at the MOC Central Facility. Through settlement, the liquid hydrocarbon production will separate from the water and will be floated over into the oil storage tanks at the MOC Central Battery. It will then be sold through the LACT Units. The water will be drained into the water storage tanks and will be sent to the Indian Basin SWD system for disposal. Theses changes will not affect the measurement methods already agreed upon in the above mentioned commingling orders, they only affect the Off-Lease Storage and Sales portions of these orders. (See attached map, Exhibit 1, and attached spreadsheet, Exhibit 2, for Well Names, API Numbers, Lease Names, Lease Numbers, Communitization Agreement Numbers, Pools/Reservoirs, and Property Codes included in this application).

A more detailed description of the proposed changes follows:

#### **MOC CENTRAL FACILITY**

The production from the following wells is presently commingled at the MOC Central Facility, located in UL "D", Section 1, T-21-S, R-23-E (Oil Conservation Division Commingling Order PLC-124 2<sup>nd</sup> amendment):

Well Name	<b>BOPD</b>	<b>MCFD</b>
Bone Flats Federal 12 #1	0	24
Bone Flats Federal 12 #2	0	3

Smith Federal #2	0	5
Smith Federal #3	1	1722

A schematic diagram of the proposed facility is attached, (See Exhibit 3), which identifies all equipment that is to be utilized and shows the flow path of all production. The API gravity of the liquid hydrocarbons from the Indian Basin Upper Penn Associated Gas Pool is 61.8°, from the Indian Basin Upper Penn Gas Pool is 55.1° and from the South Dagger Draw Upper Penn Associated Gas Pool is 45.5°. The calculated API gravity of the liquid hydrocarbons, after the proposed changes are made will be approximately 50°. There are 2 test separators, 4 production separators and a stack pack for the MOC Federal Well #8 at the MOC Central Facility. A production manifold allows for individual well testing in the test separators while production from the remaining wells of each lease flows to the production separator dedicated to that lease. There is one production separator for the MOC Federal Lease wells, one for the Bone Flats Federal 12 Lease wells, one for the Stinking Draw Lease wells, and one for the North Indian Basin Unit #7, #13, #14, #15, #23 and #26 wells. After separation, the gas production is metered and enters the Loop Gas Gathering system to be transported to the compressors. After separation, the liquid hydrocarbon production is metered, stored in the tanks at this facility and then sold through the two LACT units. The water production, after being separated and measured, is sent to the water storage tanks, located at this facility. The water is then pumped to the SWD wells that comprise the Indian Basin Field produced water disposal system. The stack pack at this facility is dedicated to the MOC Federal Well #8 which produces from the Morrow formation. After separation through the stack pack, the gas production is metered and then enters the Loop Gas Gathering system to be transported to the compressors. The water production is metered and sent to the water storage tanks to be pumped to the Indian Basin Field produced water disposal system. This well does not produce any liquid hydrocarbons.

The method for allocating production to each well is as follows:

<u>Individual Well Test x Producing Days</u> X (Total Lease Production) = Allocated Volume Total (Well Tests x Producing Days) for all wells

Currently the liquid hydrocarbon and water production from the North Indian Basin Unit 11 Satellite Facility are delivered to the MOC Central Facility through two pipelines. One pipeline carries only the liquid hydrocarbon production from the North Indian Basin Unit 11 Satellite Facility separators. The other pipeline carries the water production from these separators as well as the water and liquid hydrocarbons from the Loop Gas Gathering System suction scrubber and compressors located at the North Indian Basin Unit 11 Satellite facility. The liquid hydrocarbon production from the North Indian Basin Unit 11 Satellite Facility separators is processed through the heater treaters, piped to the storage tanks located at the MOC Central Facility and is then sold through the LACT units.

Marathon proposes to pipe the recombined liquid hydrocarbon and water production from the North Indian Basin Unit 11 Satellite Facility and Station 210, 215, 226, 235 and 311 Satellite Facilities through various pipelines to the MOC Central Facility gun barrel tank. The combined liquid hydrocarbon and water production from these Satellite Facilities will be separated through settlement in the gun barrel tank. The liquid hydrocarbon production will be floated over into the oil storage tanks at the MOC Central Facility and sold through the LACT units. The water production will be drained off the bottom of the gun barrel tank and sent to the water storage tanks at this facility. The water will then be pumped to the SWD wells that comprise the Indian Basin water disposal system. A map is enclosed showing the lease numbers and locations of all leases and wells that contribute production to the proposed commingled/common storage facility (Exhibit 1).

## NORTH INDIAN BASIN UNIT 11 SATELLITE FACILITY

The North Indian Basin Unit 11 Satellite separation and measurement facility is located at UL "O", Sec. 2, T-21-S, R-23-E. The production from the following wells is commingled in this satellite facility (Oil Conservation Division Commingling Order PLC-124 2<sup>nd</sup> amendment):

#### **Well Name**

Comanche Federal "3" #1

Comanche Federal "3" #2

North Indian Basin Unit Gas Com #3

North Indian Basin Unit #10

North Indian Basin Unit #11

North Indian Basin Unit #12

North Indian Basin Unit #16

North Indian Basin Unit #17

North Indian Basin Unit #18

North Indian Basin Unit #19

North Indian Basin Unit #20

North Indian Basin Unit #21 (Morrow)

North Indian Basin Unit #22

North Indian Basin Unit #24

North Indian Basin Unit #25

North Indian Basin Unit #27

North Indian Basin Unit #30

A schematic diagram of this facility is attached, (See Exhibit 4), which identifies all equipment that will be utilized and shows the proposed flow path of all production.

Currently there are two test separators and two production separators at this satellite facility. A production manifold allows for individual well testing in the test separators while production from the remaining wells flows to the production separator dedicated to that lease. There is one production separator for the Comanche Federal "3" #1 and #2 wells and the North Indian Basin Unit Gas Com #3 well and one production separator for the North Indian Basin Unit wells. The gas production from this facility is measured then enters the Loop Gas Gathering system to be sent to the compressors. After separation, the liquid hydrocarbon and water production is metered using turbine meters. The liquid hydrocarbon production is sent, via pipeline, to the heater treaters at the MOC Central Facility and then is piped to the liquid hydrocarbon storage tanks at the MOC Central Facility to be metered and sold through the LACT units. The water production is combined with the water and liquid hydrocarbons pulled off the Loop Gas Gathering System suction scrubber and the compressors and sent, via pipeline, to the gun barrel tank at the MOC Central Facility. The gas production from the North Indian Basin Unit #21 (Morrow) well, after separation and measurement, is also piped to this satellite facility and enters the Loop Gas Gathering system to be transported to the compressors. The water production from this well is metered at the well location and sent, via pipeline to the wells that comprise the Indian Basin Field produced water disposal system.

Marathon proposes to recombine all liquid hydrocarbon production and water production measured at this facility and send it, through one pipeline, to the gun barrel tank at the MOC Central Facility. It will then be separated and handled as shown in the description of the MOC Central Facility, above.

The method for allocating production to each well is as follows:

Individual Well Test x Producing Days X (Total Lease Production) = Allocated Volume Total (Well Tests x Producing Days) for all wells

## STATION 210 FACILITY

The Station 210 separation and measurement facility is located at UL "M", Sec. 10, T-21-S, R-23-E. The production from the following wells is commingled in this satellite facility (Oil Conservation Division Commingling Order PLC-144, 1<sup>st</sup> amendment):

## Well Name

North Indian Basin Unit #1

North Indian Basin Unit #4

North Indian Basin Unit #8

North Indian Basin Unit #9

North Indian Basin Unit #31

North Indian Basin Unit #34

North Indian Basin Unit #36

A schematic diagram of the proposed facility is attached, (See Exhibit 5), which identifies all equipment that is being utilized and shows the flow path of all production. There is one 3-phase test separator and one 3-phase production separator at this satellite facility. A production manifold allows for individual well testing in the test separator while production from the remaining wells flows to the production separator. Gas is measured and then enters the Loop Gas Gathering system to be sent to the compressors. The liquid hydrocarbon and water production are separated and metered using turbine meters. The liquid hydrocarbon production will then be recombined with the water production and will

be sent, via pipeline, to the gun barrel tank at the MOC Central facility to be handled as shown in the description of the MOC Central Facility, above.

The method for allocating production to each well is as follows:

<u>Individual Well Test x Producing Days</u> X (Total Lease Production) = Allocated Volume Total (Well Tests x Producing Days) for all wells

The production from the North Indian Basin Unit #34, which produces from the Morrow formation is measured through a 2-phase separator located at this facility. The gas is metered and enters the Loop Gas Gathering System to be sent to the compressors. This well doesn't produce any water or liquid hydrocarbons.

## STATION 215 FACILITY

The Station 215 Satellite Facility is located in UL "K", Section 15, T-21-S, R-23-E, Eddy County, New Mexico. The production from the following wells is commingled at this facility (Oil Conservation Division Order PLC-175):

## Well Name

North Indian Basin Gas Com #32 Federal IBA Gas Com #1 Federal IBA Gas Com #2 Indian Basin "A" #2 Indian Basin "A" #3 Indian Basin "A" #4

All the above wells are in Township 21 South, Range 23 East. The North Indian Basin Unit Gas Com #32, Federal IBA Gas Com #1, Indian Basin "A" #2, Indian Basin "A" #3, and Indian Basin "A" #4 produce from the Indian Basin Upper Penn Gas Pool. The Federal IBA Gas Com #2 produces from the South Dagger Draw Upper Penn Associated Gas Pool. The Federal IBA Gas Com #1 and #2 and the North Indian Basin Unit Gas Com #32 produce from the Upper Penn (Cisco-Canyon) zone and operate under Communitization Agreement SW-280.

A schematic diagram of the proposed facility is attached, (See Exhibit 6), which identifies all equipment that is being utilized and shows the flow path of all production. This facility consists of five 3-phase separators. Two of these separators are used to measure the production from the Indian Basin "A" #2, #3, and #4 wells. One is a test separator, the other is a production separator. A production manifold allows for individual well testing in the test separator while production from the remaining wells flows to the production separator. The Federal IBA Gas Com #1, #2 and the North Indian Basin Gas Com #32 wells, are individually measured through the three remaining separators. Gas production is measured and then enters the Loop Gas Gathering system to be sent to the compressors. The liquid hydrocarbon and water production are separated and metered using turbine meters. The liquid hydrocarbon production will then be recombined with the water production and will be sent, via pipeline, to the gun barrel tank at the MOC Central facility to be handled as shown in the description of the MOC Central Facility, above.

The method for allocating production to each well is as follows:

Individual Well Test x Producing Days X (Total Lease Production) = Allocated Volume Total (Well Tests x Producing Days) for all wells

## STATION 226 FACILITY (SOUTH INDIAN BASIN)

The Station 226 measurement and storage facility is located in UL "F", Section 26, T-21-S, R-23-E, Eddy County, New Mexico. The production from the following wells is commingled at this facility (Oil Conservation Division Order CTB-482 –  $1^{st}$  Amendment):

## **Well Name**

Indian Basin "C" #1

Indian Basin "C" #2

Indian Basin "C" #3

Indian Basin "A" #1

Indian Basin "D" #1

Indian Basin "D" #2

Indian Basin "E" #1

Indian Basin "E" #2

Federal Indian Basin "C" Gas Com #1

Federal Indian Basin "C" Gas Com #2

A schematic diagram of the proposed facility is attached, (See Exhibit 7), which identifies all equipment that is being utilized and shows the flow path of all production. This facility consists of three 3-phase separators, a gun barrel tank, a water storage tank and a liquid hydrocarbon storage tank. Two of the separators are used to measure the production from the Indian Basin "C" #1, #2, and #3 wells. One is a test separator, the other is a production separator. A production manifold allows for individual well testing in the test separator while production from the remaining wells flows to the production separator. The Indian Basin "A" #1 is individually measured through the remaining separator. Gas is measured and then enters the Loop Gas Gathering system to be sent to the compressors. The liquid hydrocarbon and water production are metered, using turbine meters, and are then recombined and sent to the on site gun barrel tank. The liquid hydrocarbon and water production from the Station 227 and Station 229 Satellite Facilities, which are recombined after measurement, are also piped into this gun barrel tank. The commingled fluids from Station 226, 227 and 229 Satellite Facilities, will then be piped to the gun barrel tank at the MOC Central Facility to be handled as shown in the description of the MOC Central Facility above.

The method for allocating production to each well is as follows:

<u>Individual Well Test x Producing Days</u> X (Total Lease Production) = Allocated Volume Total (Well Tests x Producing Days) for all wells

#### STATION 227 FACILITY

The Station 227 measurement and storage facility is located in UL "K", Section 27, T-21-S, R-23-E, Eddy County, New Mexico. The production from the following wells is commingled at this facility (Oil Conservation Division Order CTB-484):

## **WELL NAME**

Indian Basin "D" #1
Indian Basin "D" #2
Indian Basin "E" #1
Indian Basin "E" #2

A schematic diagram of the proposed facility is attached, (See Exhibit 8), which identifies all equipment that is being utilized and shows the flow path of all production. This facility consists of three 3-phase separators. One of these separators is used to measure the production from the Indian Basin "D" #1 and #2 wells, and one is used to measure the production from the Indian Basin "E" #1 and #2 wells. The remaining separator is used as a test separator. A production manifold allows for individual well testing in the test separator while production from the remaining wells flows to the production separators dedicated to each lease. Gas production is measured and then enters the Loop Gas Gathering system to be sent to the compressors. After being metered, the liquid hydrocarbon and water production are recombined and sent, via pipeline, to the gun barrel tank located at the Station 226 Facility to be handled as shown in the above description.

The method for allocating production to each well is as follows:

<u>Individual Well Test x Producing Days</u> X (Total Lease Production) = Allocated Volume Total (Well Tests x Producing Days) for all wells

## STATION 229 FACILITY

The Station 229 measurement facility is located in UL "J", Section 29, T-21-S, R-23-E, Eddy County, New Mexico. The production from the following wells is measured at this facility:

WELL NAME
Federal Indian Basin "C" Gas Com #1
Federal Indian Basin "C" Gas Com #2

A schematic diagram of the proposed facility is attached, (See Exhibit 9), which identifies all equipment that is being utilized and shows the flow path of all production. This facility consists of one 3-phase separator. The production from both wells is separated and measured through this separator. A well test for each well is obtained by shutting in the wells one at a time. Gas production is measured and then enters the Loop Gas Gathering System to be sent to the compressors. After being metered, using turbine meters, the liquid hydrocarbon and water production are recombined and sent, via pipeline, to the gun barrel tank located at the Station 226 Facility to be handled as shown in the above description.

The method for allocating production to each well is as follows:

Individual Well Test x Producing Days X (Total Lease Production) = Allocated Volume Total (Well Tests x Producing Days) for all wells

## STATION 235 FACILITY

The Station 235 measurement facility is located in UL "M", Section 35, T-21-S, R-23-E, Eddy County, New Mexico. The production from the following wells, all located within Section 35, is measured at this facility:

A schematic diagram of the proposed facility is attached, (See Exhibit 10), which identifies all equipment that is being utilized and shows the flow path of all production. There are two 3-phase separators at this satellite facility, one is a test separator, the other is a production separator. A production manifold allows for individual well testing in the test separator while production from the remaining wells flows to the production separator. Gas is measured and then enters the Loop Gas Gathering system to be sent to the compressors. After being metered, using turbine meters, the liquid hydrocarbon and water production are sent to the storage tank at this facility where it will be combined with the liquid hydrocarbon and water production from the Station 311 Facility. This commingled production will then be sent, via pipeline, to the gun barrel tank at the MOC Central Facility to be handled as shown in the above description.

The method for allocating production to each well is as follows:

Individual Well Test x Producing Days

X (Total Lease Production) = Allocated Volume
Total (Well Tests x Producing Days) for all wells

## STATION 311 FACILITY

The Station 311 storage and measurement facility is located in UL "F", Section 11, T-22-S, R-23-E, Eddy County, New Mexico. The production from the following wells, all located within Section 11, is measured at this facility:

The Smith Federal #1 and #2 wells produce from the Indian Basin Upper Penn Gas Pool (79040). The Smith Federal #3 produces from the Indian Basin Upper Penn Associated Gas Pool (33685).

A schematic diagram of the proposed facility is attached, (See Exhibit 11), which identifies all equipment that is being utilized and shows the flow path of all production. There are two 3-phase separators at this satellite facility, one is a test separator, the other is a production separator. A production manifold allows for individual well testing in the test separator while production from the remaining wells flows to the production separator. Gas is measured and then enters the Loop Gas Gathering system to be sent to the compressors. After being metered, using turbine meters, the liquid hydrocarbon production will be recombined with the water production and will be piped to the tank at the Station 235 Facility to be handled as shown in the Station 235 Facility description above.

The method for allocating production to each well is as follows:

<u>Individual Well Test x Producing Days</u> X (Total Lease Production) = Allocated Volume Total (Well Tests x Producing Days) for all wells

Re: Amendment of Commingling Orders PLC-124, PLC-144, PLC-175, CTB-482, and CTB-484

State and Federal Leases and Communitization Agreements Affected: E-10169, E-10170, E-7906, NM-1832, NM-0251099-A, NM-34446, NM-384623, NM-384625, NM-384628, NM-4827-B, NM-51107, NM-05551, NM-05551-A, NM-05607, NM-05608, NM-05612-A, NM-06953, NM-70522-A, NM-81677, Unit Agreement 891008508-O and Com Agreements NM SW-242, SW-342, SW-280 and NM 91035, located in Townships 20, 20.5, 21 and 22 South, Ranges 23 and 24 East, Eddy County, New Mexico

#### Ladies and Gentlemen:

Marathon Oil Company is proposing to amend the Indian Basin Field Commingling, Off-Lease Storage, Measurement, and Sales agreement in order to increase gas and oil production by reducing system operating pressures. This amendment will supersede Oil Conservation Division Commingling Orders PLC-124, 2<sup>nd</sup> Amendment, PLC-144, 1<sup>st</sup> Amendment, PLC-175, CTB-482, 1<sup>st</sup> Amendment, and CTB-484. Currently separator pressures must be kept high to push oil into the Indian Basin Gas Plant liquid gathering system. This work will allow separator pressures to be reduced by up to 50 psi immediately at some sites and will allow for additional pressure reduction in the future. As reservoir pressure at Indian Basin continues to decline, the ability to reduce separator pressure becomes critical to keeping production rates higher for a longer period of time. While the main value of this work is increased gas and oil production, it is likely that a higher price will be received for the condensate by commingling it with other oil at the MOC Central Facility rather than sending it to the Gas Plant for sale.

Marathon proposes to change only the point of sale for some of the liquid hydrocarbon production covered by the above referenced Commingling Orders. These changes will not affect the measurement methods already agreed upon in these documents. A copy of the application is attached and explains the proposed changes in detail.

Our records indicate that you are an interest owner in one of the subject leases and, as such, pursuant to New Mexico Oil Conservation Division rules and regulations, are requested to provide your consent to this proposal. Please indicate your approval by signing in the space below and returning one copy of this letter to this office in the enclosed envelope. The second copy is for your files. If you have any objections to this application, please contact the New Mexico Oil Conservation Division Office at 1220 S. St. Francis Drive, Santa Fe, NM 87505, (505) 476-3440. If you have any questions, please call me at (915) 687-8321. Your prompt attention to this matter will be greatly appreciated.

Sincerely, Linny Larke Ginny Larke	Approved thisday of, 2003
