No uncommon interests.

### 4. Additional statements and data to support commingle.

The well is completed with 5  $\frac{1}{2}$ " OD casing. In order to dually complete the well to recover all economic reserves, the use of small diameter special clearance tubing would be required. Performing a dual completion as described could not be economically justified for a zone with limited deliverability. To produce the Wolfcamp interval (upper zone) up the annulus (5  $\frac{1}{2}$ " - 2  $\frac{1}{8}$ ") is not recommended due to liquid loading and insufficient velocity to lift produced fluids with the estimated gas rates listed above. The addition of the Osudo Morrow with the Wilson Wolfcamp South will prevent waste that would not otherwise be possible due to the increased cost to produce each individual zone. Commingling will prevent early abandonment of each productive zone.
