Re: Application for NSL (COU #19 (A-14) API# 30-039-20426)

Mr. Brooks:

The COU #19 (A-14) was drilled in September of 1971 as a gas injection well. In February of 2007, Benson-Montin-Greer Drilling Corp. (BMG) submitted a notice of intent to remove the packers and convert the well from gas injection to gas production. The well is located 495' FNL and 495' FEL in Unit A of Section 14, T24N, R01W. BMG would like to request approval for a non-standard location for this well in order to produce out of the Mancos formation. The well is located within the Canada Ojitos Unit. All adjacent quarter-quarter sections to Unit A, Section 14, T24, R01W are within the same unit. COU Working and Revenue Interest Owners have the same interest throughout the unit. All adjoining sections toward which this location encroaches (Sections 11, 12, and 13 of T24N, R01W) are in the Canada Ojitos Unit and in common ownership with Section 14.

Sincerely,

Zach Stradling, Engineer
Benson-Montin-Greer Drilling Corp.
