NATURE OF RELEASE

Type of Release	Tri-ethylene Glycol	Volume of Release	2 - 3 barrels	Volume Recovered	None
Source of Release	Glycol Released through Flare Stack	Date and Hour of Occurrence	1/26/2010 @ 0300	Date and Hour of Discovery	1/27/2010 @ 0300
Was Immediate Notice Given?	Yes No <input checked="" type="checkbox"/> Not Required	If YES, To Whom?			
By Whom?	Date and Hour				
Was a Watercourse Reached?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If YES, Volume Impacting the Watercourse.			

If a Watercourse was Impacted, Describe Fully.*

WATER @ 225'

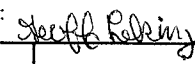

Describe Cause of Problem and Remedial Action Taken:

During glycol "sweeting" activities at the South Plant, a volume of glycol was expelled through the northeast flare stack when a manual valve was opened too quickly. During initial response activities saturated soil was scraped and stockpiled on-site pending transportation to a NMOCD approved landfill.

Describe Area Affected and Cleanup Action Taken.

An approximately 1,000 sq ft area below the flare stack was impacted by liquid glycol, an area of approximately 2,000 sq ft was impacted by airborne glycol. Impacted area will be remediated to applicable NMOCD regulatory levels.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases, which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
